Mr. Speaker, in the judgment of those minds whose experience enables them to speak with authority, I am justified in declaring that the American farmer in the sections of our country so often referred to in these remarks, possesses his present important advantages for the shipment of his farm products to Great Britain and other countries which import grain and other agricultural products by reason alone of the reduction in the charges for inland transportation; and while no man can exactly estimate the operations of the real forces in the ascertainment of the due proportion of influence borne each by the competition between markets in obedience to the laws of supply and demand, and the improvement of the roadway and equipment and the economies of transportation in the management of traffic in so far as they may apply to railroads in effecting this reduction of freight rates, we are able to say with confidence, that upon free highways, the laws of competition and of supply and demand in their unrestrained action do regulate transportation rates.

And here I approach a feature of the measure under consideration which in my judgment should have a controlling weight with every Representative upon this floor in determining his vote on this bill, because to a large degree, if not entirely, it offers a solution of the great "railroad problem" of the age with respect to freight charges, and is wholly within the legitimate power of Congress. The lakes system, the Erie Canal, and the Mississippi River since its improvement by the Eads jetties have each exercised a great influence upon this question, and the construction of the Hennepin Canal and its connection with the proposed route across the State of Michigan from Saugatuck to Detroit, in shortening the distance of the present route and avoiding the dangers and obstacles of the Mackinaw Straits, must still further combine with the other great water-ways of the country in regulation of the rates of transportation; but they lose the full force of their power as free highways because the action of the laws of competition and of supply and demand in their beneficial operation in this direction is not unrestrained and untrammelled action.

Neither of them as compared with the Atlantic seaports can be said to be the shortest route for traffic to foreign countries, and the disadvantages of distance and time in many ways operate to destroy their regulative power in fixing the cost of transportation; besides, the Mississippi River, by reason of its depth, has developed the "barge system" of freightage to obviate the disadvantages of shallow water, and the increased cost of handling the bulky freight passing over this and the other named water-ways diminishes their regulating power. In addition, the spring floods, which sweep like a torrent the entire channel of the Mississippi, its overflowed levees and broken

crevasses, spreading devastation and distress in its track, and the Erie Canal as the continuation of the lake system of traffic absolutely locked up in chains of ice five months in the year, paralyze their immense commercial power; and the country loses the pecuniary advantage gained during the season when the navigation of these water-ways are successfully prosecuted.

But, Mr. Speaker, none of these drawbacks could in the nature of things exist to trammel or restrain the freest operation of this power offered by the free highway of the proposed Maryland and Delaware ship-canal contemplated by the bill under consideration, because when completed it will be a free highway in its largest sense, capable of floating vessels of the largest size at low ebb tide, and the terminal end of the shortest route to the ocean, practically free from the obstacles of ice or flood, and going to the very root of the matter as to the regulative influences exerted over freight charges on railroads by the well-known forces operative in transportation and in trade. Two Government surveys ordered by Congress have been made by skilled engineers of the United States Army, one by Major W. N. Hutton and the other by Captain Thomas Turtle, under the direction of Colonel William P. Craighill, full reports of which several surveys are before us, and the entire feasibility of such waterway is definitely determined.

Of the various routes examined and estimated a choice will most likely be made from either of two northernmost routes, by way of the Sassafra or Back River, or the southernmost route, by way of the Choptank river, the minimum cost of construction being \$8,000,000 and the maximum \$16,000,000, as the board of engineers provided for in the bill shall decide to locate the route. The lengths of the several routes given are respectively from Baltimore to a common point at sea 12 miles outside of the Delaware Breakwater. The distance from Baltimore by the route now used to the same point is 325 miles, or 33½ hours, allowing a speed of 10 miles in open water and 7 miles in dredged channels. Standing at the head of the Chesapeake Bay, Baltimore by reason of her physical position holds the scepter of commercial control over all the developed wealth of our country's most favored region, so far as it relates to our foreign traffic, possessing superior advantages as the very shortest route to the ocean for the great and growing commerce of the West, Northwest, and Southwest, which is being so rapidly developed by the railway systems of these sections under the able supervising management of the Baltimore and Ohio Company over these great steel-rail rivers of commerce.

By reason of that geographical position this pioneer of rail system asserts its strength and power in the great contests which from time to time have sprung out of the rivalry of the trunk lines for this east-bound trade—the Erie and Western, the Central and Hudson, the Pennsylvania Central, and Baltimore and Ohio, the city of Baltimore being nearer to every interior point of those sections of country drained by these several lines than the great metropolis of New York. The following table of comparative distances by the very shortest route speaks a voice that cannot be misunderstood nor put down:

Distance from—	To New York.	To Baltimore.	Difference.
	Miles.	Miles.	Miles.
Chicago.....	912	804	108
Detroit.....	672	639	33
Toledo.....	695	579	117
Cleveland.....	598	466	132
Pittsburgh.....	444	327	117
Cincinnati.....	757	579	178
Saint Louis.....	1,085	920	165
Indianapolis.....	825	684	141
Louisville.....	851	696	155

And, Mr. Speaker, the commercial interests of these great *entrepôts* the draining basins of that entire section of country must appreciate in the future as in the past the commercial advantages of the port of Baltimore by reason of this shorter distance, and the cheaper transportation rates for all those products, agricultural, mining, and manufacturing, which are annually swelling our export trade, comprising the East-bound traffic as well as the advantages in the cheapened cost of all those articles of merchandise either imported from abroad or manufactured in the East entering into their daily consumption; the cities of Cincinnati, Louisville, and Saint Louis controlling as they do two-thirds of the traffic in domestic merchandise the productions of Eastern manufacturers for the States south of the Ohio and Missouri Rivers, a traffic amounting annually to hundreds of millions of dollars.

And, sir, this cheapened rate of transportation under ordinary circumstances is maintained by the Baltimore route upon through traffic from the West and Northwest even under the "confederation or pooling system," which recognizes its superior position by the adoption of what is known as "differential rates," for whatever may be the rate fixed upon from Chicago to New York, the rate for the same freight to Baltimore, in consequence of the lessened distance, is 3 cents per hundred pounds cheaper. But this cheapening is practically offset to exported products because of the distance of 325 miles from the Patapasco to the Capes of the Delaware by way of Cape Charles,

which the proposed canal will remove, restoring 200 miles in shortened distance and 23 hours in saving of time as between Western points of collection of produce and the foreign markets, and still further cheapening transportation rates from \$1 to \$1.75 per ton.

The entrances and clearances at American ports for 1881 exceeded thirty millions of tons, and in the judgment of the board of trade of Baltimore it is declared a fair assumption that American commerce would be benefited by the proposed ship-canal to the extent at least one-third of their tonnage through the mere natural effects and influences of competition. Nimmo's report on foreign commerce for 1881 shows the entrances and clearances of vessels in the foreign trade of Baltimore averaged 1,365,865 tons each way, and the annual increase is declared to be 44 per cent., producing a saving in the cheapening of transportation of nearly one million and a half dollars, and the increase that must necessarily result from the impetus given to commerce would so far increase that saving that in less than ten years the entire cost of the canal would be liquidated. Now, sir, add to this the advantages to be derived by the whole country by reason of the regulative influences such a power must necessarily exert over the traffic of the States in determining freight charges, and who can while attempting to estimate them dare gainsay the national character of the project or hesitate a moment in voting the asked-for appropriation of \$1,000,000 toward its construction?

Practically speaking, the execution of this great work is bringing the Atlantic Ocean nearly two hundred miles inland to a point nearest to all western products by two hundred miles already. And the States of Delaware and Maryland should not be permitted by the Government, even if they were willing, to erect a toll canal and make a monopoly of this key to the golden gates of the ocean, through which are to flow the treasured values of our labor production, the luscious fruits of a new Hesperides in the establishment of a commercial Eldorado. These are some of the commercial benefits which must follow the opening of this great free national highway. Need I add further reasons by way of inducement to the support of this measure?

The cost as compared with the advantage to accrue is a mere bagatelle for a government whose treasury boasts a balance of more than a hundred millions of surplus; that has spent more than \$60,000,000 in river and harbor improvements; that has given in principal and interest to the Pacific Railroad \$90,000,000; that has expended in land grants, money subscriptions and indorsement of bonds to wagon-roads and canals \$100,000,000, and to States for railroads and to railroad corporations direct 215,000,000 acres of the most valuable of our public domain, in money value nearly a half billion of dollars. Sir, these enormous appropriations have been justified upon the plea of cheaper transportation and shorter routes to the sea, and the Maryland and Delaware free ship-canal is eminently necessary as offering our growing commerce a cheaper and shorter route to the ocean.

Mr. Speaker, as a means of military and naval defense, its construction is a matter of the first importance. Colonel Craighill, in forwarding the report of Major Hutton's survey to the Chief of Engineers of the United States Army, says "no argument is necessary to show the great value, in time of war with a maritime power, of such an interior line of communication between the great Chesapeake and Delaware Bays and their tributary streams as this canal would be." In case of war with naval powers the existence of this canal would enable the Government to concentrate the combined resources of Philadelphia, Baltimore, and Washington for the prompt and complete defense of either of these great cities, while the capes of the Delaware and the approaches to the Patuxent would be equally covered by this new line for the speedy exchange of defensive material.

As a matter of history it is well known that General Washington deeply regretted the non-existence of such a line of communication, claiming that it would have secured him a certain and substantial victory upon the hard-fought field of Brandywine and enabled him to complete the investment of Cornwallis at Yorktown without the dread of interference from the fleet of Sir Guy Carleton. The disgraceful capture and burning of the capital of the nation would never have been attempted by the British if this canal had existed in 1814, connecting as it will when completed the Washington arsenal and navy-yard with the League Island navy-yard.

In the first year of the war of 1812 the Government was forced to expend nearly a half million dollars for wagoning materials across this peninsula; and if the canal had existed during the late civil war it would have been a saving to the expenditures of the Government of not less than \$50,000,000 in transportation of men and materials of war; and the armaments against the peninsula and the North Carolina sounds, which had to be fitted out at Annapolis, could easily have been equipped and sent forth from Philadelphia at a great saving of cost.

In conclusion, add to this the present helpless condition of our Navy, the long line of defenseless sea-coast inviting the ravages of a maritime power in the event of war, the almost irreparable damage that would result from the capture of Washington, with all its valuable archives, public buildings, and stored treasures, or the capture and destruction of either of the other great cities whose protection is guaranteed by the construction of this canal, and then hesitate not nor falter in the discharge of so imperative a duty.

Election of President and Vice-President.

SPEECH

OF

HON. THOMAS UPDEGRAFF,

OF IOWA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 20, 1882.

The House having under consideration the substitute for the bill (S. No. 613) to fix the day for the meeting of the electors of President and Vice-President, and to provide for and regulate the counting of the votes for President and Vice-President, and the decision of questions arising thereon—

Mr. UPDEGRAFF, of Iowa, said:

Mr. SPEAKER: I do not desire to occupy much of the time of the House in the discussion of this bill, but will be ready to answer any questions which any gentleman may see fit to ask, so far as I am able to answer them; for in the brief time that can be given to it nothing like a full discussion can be attempted. I will say generally that the bill is what may be called properly a compromise bill. I do not think it represents exactly the views of any single member of the committee. At the same time the committee as a whole, I think, believe that it is the best bill they can present. They have given it very careful and prolonged consideration. The subject is one that has already been discussed until it is threadbare.

For myself I do not approve all the features of the bill and could not give them, standing alone, my assent. For instance, there is that feature of the bill which recognizes in the two Houses of Congress a power for counting the electoral vote, provisionally or otherwise. Perhaps I am wrong in conceding what seems to my mind to be the right course in the matter. Nevertheless, I have felt it my duty to make concessions, as my colleagues on the committee have felt it to be theirs to make some concessions; so that the bill as a whole meets my heartiest approval. I have no hesitation in believing and in saying that it is the best bill, the most carefully considered bill on this subject that has ever been presented to any American Congress. Its main features are these:

In the first instance it provides that the electoral vote shall be counted by the two Houses of Congress and prescribes particularly the method of such counting. It recognizes also the complete and perfect power of every State in the Union to choose electors in its own method, and it provides that the ascertainment of the persons chosen by the State shall be conclusive upon the counting power if made by the highest judicial tribunal of the State. After this, in cases of dispute, it provides for a proceeding in the courts of the United States in the nature of *quo warranto* for a hearing and determination of the title to the Presidency.

I will say a few words on this subject and will suggest a few of the reasons why it was thought unsafe to stop merely at a Congressional count. As I understand our institutions, and I speak only for myself now, the traditions of our race require that in every disputed election, high or low, a judicial determination of the dispute is right and proper.

Mr. HAMMOND, of Georgia. Will the gentleman from Iowa yield to me for a question?

Mr. UPDEGRAFF, of Iowa. With pleasure.

Mr. HAMMOND, of Georgia. Does this mean that after the electoral vote shall have been counted in joint session of the two Houses of Congress and a person has been declared to be President or Vice-President the title of that person shall then be submitted to the trial of a jury?

Mr. UPDEGRAFF, of Iowa. No, sir; it does not mean that. It is provided that after the Congressional count, if there is a dispute, the dispute shall be settled by the courts.

Mr. HAMMOND, of Georgia. By trial by jury, is it not?

Mr. UPDEGRAFF, of Iowa. There may be a jury to ascertain and determine facts.

Mr. HAMMOND, of Georgia. After Congress shall have declared that a certain man is elected President or Vice-President, does not your bill, in section 9 and the sections following it, result in this: that the man declared to be defeated in the contest may present a petition for *quo warranto* to the judge of the district in which the defendant resides and obtain against him such proceedings as will prevent his entering upon the duties of his office?

Mr. UPDEGRAFF, of Iowa. The bill does provide that the candidate who is declared not elected may proceed by *quo warranto* in the courts.

Mr. CARLISLE. Under the provisions of the bill as it stands it will not be competent for the defeated candidate to obtain an injunction against his successful competitor and prevent him from being inaugurated as President. All he could do would be to apply to the court for a writ in the nature of *quo warranto*.

In the meantime the person declared elected by the two Houses of Congress would, if the 4th of March had arrived, take his seat, and even after the decision of the circuit court and the appeal to the Supreme Court the

incumbent would hold on to the office under the provisions of this act until the final decision of the case.

Mr. UPDEGRAFF, of Iowa. I think so.

Mr. HAMMOND, of Georgia. But it might be submitted to a jury and the President might hold until that jury decided one way or the other. That is the bill, is it?

Mr. UPDEGRAFF, of Iowa. No, sir; I think not. The case cannot be submitted to a jury.

Mr. HAMMOND, of Georgia. I thought you said it might be.

Mr. UPDEGRAFF, of Iowa. I did not say so; the gentleman misunderstood me. The bill provides that questions of fact may be submitted to a jury, but not the case. It is certainly possible to make a distinction between questions of fact in a case and the whole case itself.

Mr. HAMMOND, of Georgia. Section 14 provides for a jury. It says "that the circuit court shall be in session on the return day of the summons, and, if necessary to that effect, shall be specially convened and a jury summoned for such return day." What do you want with a jury if not to try the case?

Mr. UPDEGRAFF, of Iowa. In reply to that I will state that it was felt by the committee that there would be no necessity for a jury in ordinary cases; but there might be a case where some questions of fact were to be determined, and under our Constitution it might not be competent to provide that there should be no jury trial.

Mr. HAMMOND, of Georgia. Then at last it is, as I said, a case in which a jury may determine the facts on which the Presidency shall rest.

Mr. UPDEGRAFF, of Iowa. They may determine any fact which the court submits to them.

Mr. REED. The gentleman is kind enough to say that he will answer questions.

Mr. UPDEGRAFF, of Iowa. As far as I can.

Mr. REED. Section 12 of this bill says "that the trial shall be had as soon as practicable after the issues have been made up." What kind of issues? Those that arise out of the complaint and the answer?

Mr. UPDEGRAFF, of Iowa. I should say so.

Mr. REED. If that is the case, then it must go to a jury, must it not? You have no provision here, as in equity, for the court making a statement of facts that it desires to have found by a jury; but it is the issues of the case that are to be tried.

Mr. UPDEGRAFF, of Iowa. Exactly.

Mr. REED. Will not that put the whole case on the jury then?

Mr. UPDEGRAFF, of Iowa. I think not.

Mr. REED. How much of it will go to the jury?

Mr. UPDEGRAFF, of Iowa. Only the facts that are submitted to them.

Mr. REED. Does anything else go to the jury, except in criminal cases?

Mr. UPDEGRAFF, of Iowa. I understand not.

Mr. REED. Then, this is to be a regular jury trial, is it not?

Mr. UPDEGRAFF, of Iowa. There may be a jury trial. The committee did not feel authorized to deny under our Constitution a trial by jury in such a case.

Mr. REED. It seems as if we ought to have some definite idea whether there is to be a jury trial or not, if we are going to pass this bill.

Mr. UPDEGRAFF, of Iowa. I do not myself think that a jury trial could be denied.

Mr. REED. I do not think the matter should be left in any vague shape.

Mr. UPDEGRAFF, of Iowa. It is not left in any vague shape.

Mr. REED. Then, the result will depend upon the verdict of the jury.

Mr. UPDEGRAFF, of Iowa. Not at all.

Mr. REED. What then?

Mr. UPDEGRAFF, of Iowa. The jury ascertains the facts, and the court declares the results of those facts when found by the jury.

Mr. REED. Will the jury find an issue on one side or the other, or will it find a statement of facts in the nature of a special verdict?

Mr. UPDEGRAFF, of Iowa. The bill provides for finding special facts.

Mr. REED. Special verdicts! Where in the bill is that provided?

Mr. UPDEGRAFF, of Iowa. Either party may require a special finding as to any material fact.

Mr. REED. "May require." Suppose neither party does?

Mr. UPDEGRAFF, of Iowa. Then we have provided a method—

Mr. REED. Suppose neither party does require a special finding; then there must be a general verdict, as in ordinary cases. I am asking for information only.

Mr. UPDEGRAFF, of Iowa. I think if there were no request for a special finding, there would then have to be a general verdict; and a general verdict is subject to the revision of the court.

Mr. REED. Allow me to suggest, in reply to that, that the requiring of a special finding does not do away with the necessity of a general verdict in ordinary cases. A special finding ordinarily, at least in the practice that I am accustomed to, accompanies a general verdict. There does not seem to be anything here to confine it to a special finding. It only provides that parties may require a special

finding of fact on any particular point. That does not preclude the idea of a general finding by the jury.

Mr. UPDEGRAFF, of Iowa. No.

Mr. REED. Then the method of procedure would result in this: that there would be a general finding, and also such special findings as might be asked for.

Mr. UPDEGRAFF, of Iowa. Yes, I think so; but the special verdict would always control the general.

Mr. BOWMAN. Will the gentleman allow me to ask him one question?

Mr. UPDEGRAFF, of Iowa. With pleasure.

Mr. BOWMAN. It is whether the gentleman does not think it extremely probably that in Southern States the jury would be Democratic, and that very likely in Northern States the jury would be Republican?

Mr. UPDEGRAFF, of Iowa. I do not know how that is; I cannot answer.

Mr. HUMPHREY. Before the gentleman proceeds, I would like to say that, according to my understanding of the law, a general verdict always controls the special finding, directly the reverse of what the gentleman has stated.

Mr. UPDEGRAFF, of Iowa. I do not so understand the law.

Mr. HUMPHREY. Some States, among them Wisconsin, require a special verdict in every case.

Mr. UPDEGRAFF, of Iowa. As to the local provisions of any State I cannot speak. But as a recognized principle the special finding always controls the general finding.

Mr. TURNER, of Kentucky. In every case.

Mr. BAYNE. There never was a court anywhere that decided otherwise.

Mr. HUMPHREY. Otherwise than what?

Mr. BAYNE. Otherwise than that the special finding controls a general verdict.

Mr. UPDEGRAFF, of Iowa. When interrupted I was going on to say that the traditions of our race recognize the propriety of judicial investigations in disputed elections. So ingrained is this tradition in the Anglo-Saxon race that it has been held by very high judicial authority in this country that a law denying to a town constable or a member of a board of aldermen of a city the right to have the dispute with reference to his election determined judicially is unconstitutional. I do not care to maintain here the doctrine that every such law is unconstitutional. It is sufficient for my purpose when I say in support of my proposition that our race everywhere, wherever the English common law prevails, recognizes the propriety of judicial investigations in all contested elections.

The necessity for a judicial investigation in disputed elections is greater with respect to a Presidential election than an ordinary election. The reason is that there is a wider field of inquiry in a Presidential election than in an ordinary election. We have first the choice of electors by the people of the States. Everybody everywhere admits the necessity and propriety of a judicial investigation of the choice (in case of dispute) of electors in the States. After the choice of electors in the States there is then created a constituency composed of electors. I believe that under the last apportionment bill the members of the electoral college will amount in the aggregate to 401. Here is an entirely new constituency.

Now, in an ordinary election the first point on which dispute usually occurs is as to the competency or qualifications of a voter. In ordinary elections the competency of a voter depends upon age, citizenship, residence, &c. Now, in the election of President by the electoral college the competency of every elector must be examined and inquired into whenever his vote is challenged. This competency depends upon the law of his State; and it may be necessary for the counting power to investigate the whole body of State law to ascertain whether or not a particular elector has been chosen in accordance with the State law, or whether he has been accredited by the proper organ of the State. And as there are thirty-eight different States there may be thirty-eight different codes of laws to be examined. So that in a Presidential election, after the choice of the electors by the States and after conceding to each State the utmost conclusiveness in her choice, there is still a wider field for dispute and for judicial inquiry than there is in an ordinary election.

Mr. CHACE. It must depend on Federal law, however; does it not?

Mr. UPDEGRAFF, of Iowa. Yes; it must depend upon Federal law also wherever there is a Federal command, as for instance, where the Constitution declares that no Federal office-holder shall be an elector. Wherever there is a Federal command with respect to the competency of the elector that Federal command must be obeyed.

Now, one word with regard to the choice of the States. As I have said, we concede to the State the fullest and widest power to choose the electors in its own way. But there is a moment, a point, when the elector emerges from the State shell, as it were, and offers himself as an elector under the Federal Constitution; and there must be a Federal power, a national power, to decide whether he is competent or not.

Now, I think the question to be determined in such cases is, not whether the elector has been chosen in accordance with the laws of the State; that states the question too broadly, because the power of choice is in the State fully and completely and the power to say who

has been chosen is a part of that power, otherwise the power itself would be of no value; but he must be declared to be chosen by some State authority competent to so declare. So that the very first question which the counting power meets must be: Is this elector certified to be chosen in accordance with the laws of the State; in other words, has the State created the tribunal and authorized the tribunal to give the elector the credentials which he presents? While this question is apparently narrow, the field of dispute and inquiry is, as I have said before, illimitable, because to answer that simple question, "Is this elector certified by the proper State authority?" may require the investigation of thirty-eight different codes of law in as many different States.

I have talked longer on this subject than I intended. My own views in this matter depend upon two or three propositions which I will state without arguing them at length. I say, first, that every question which arises in a disputed Presidential election that is not a pure question of fact requires the interpretation, construction, and application of law to fact-conditions; that this function is a judicial function; and that under our Constitution the only department of the Government which can exercise this function must be the judiciary of the United States.

The bill may involve objectionable features; I am aware of it. I am also aware of the very general principle that the conferring of any power on any tribunal or upon any man involves objection, and that the science of government consists largely in wisely regulating the devolutions of power in such manner as to make an effective government and not to infringe upon the liberty of the citizens. I am aware there may be objections to the devolution of power on the court to try; but I ask gentlemen where there is anything better within our reach?

Now, another proposition, and it is this: that it is not given to human wit nor to human foresight to foresee or forecast or provide by written laws for every complex case which may arise in the future. No man who has practiced law, no man who has observed what is going on around him, but knows that, owing to the infirmity of human language, to the variety of human conditions and human methods no man has ever been able to foresee, no man can foresee or forecast the conditions of fact which may arise and provide for them by written law. This is a common truth, and from the necessity arising from this truth has grown the English common law, the glory of the Anglo-Saxon race.

Now, one more proposition, and that is this, and it is practical: if you make a counting power of the two Houses of Congress nobody I know of contends that they can be dissolved into a joint convention and vote per capita. Nobody claims it. It has been once in a while suggested. It was suggested once in the presence of the Senate of the United States, and almost every Senator broke out with angry remonstrance, because a vote in this House and a vote in the Senate are not equal.

Furthermore, they cannot be reduced so as to balance one another. The idea may be illustrated by this; that they are vulgar fractions incapable of reduction to a common denominator. Therefore, it is impossible to make a joint convention out of the two Houses.

Furthermore, the Constitution of the United States declares that Congress shall consist of two separate Houses, and when you have effected a solution, you have no "Congress" under the Constitution. Nobody claims this may be done that I know of.

Now, then, you have a deliberative body composed of only two constituents, and you have no umpire. Now, what are you to do when there is disagreement? There is the House with one vote and the Senate with one vote. There is perhaps one or two or three ways out of it, but this condition is inevitable. Let us see what may be done. You may provide that every vote shall be counted unless both Houses agree to reject, or you may provide that no vote shall be counted unless both Houses agree to count. Here are two ways, but there is a third way which has been attempted, and which I declare to be impossible, and that is to define two classes of cases, in one of which every vote shall be counted unless both Houses agree to reject, and another class wherein no vote shall be counted unless both Houses agree to count.

But the trouble we have here is this, that you can never define the two classes of cases. If human language were like mathematics, if we could foresee every complex condition which may arise in the future so we could measure it as we measure quantities with figures, then you might define the two classes. But I say, owing to the infirmity of language and its uncertainty and to the uncertainty of human affairs, it is not possible to define those two classes of cases. Therefore the upshot of the whole matter is there are only two things to do, and that is to provide that unless both Houses agree to receive no vote shall be counted, or that unless both Houses agree to reject every vote offered shall be counted. Neither of these propositions would be acceptable to any body of men.

Now, Mr. Speaker, if the House will bear with me—and I would be glad to quit at any time if I thought I had done my duty by doing so—

Mr. TYLER. Will the gentleman let me ask him a question?

Mr. UPDEGRAFF, of Iowa. Yes, sir.

Mr. TYLER. Did the committee consider the practicability of bringing legal proceedings in the Supreme Court rather than take them there by appeal from the circuit court?

Mr. UPDEGRAFF, of Iowa. We did not give the Supreme Court original jurisdiction; we would have been glad to do that, but the Constitution limits the original jurisdiction of that court to particular classes of cases, of which this is not one.

Now, Mr. Speaker, to illustrate and enforce the proposition I have suggested I want to refer briefly to some cases that have arisen in our past history in connection with this subject. In the election for the fourth term the electors from the State of Georgia sent to the President of the Senate only this: a sheet of ordinary foolscap paper, at the head of one of the pages of which was written the name of Thomas Jefferson and the name of Aaron Burr. The electors signed their names immediately under the names of the candidates, and that is all there was on that paper. It was forwarded to the President of the Senate, and on the reverse side of the communication were these words:

We certify the within to contain our votes for President and Vice-President.

That is all there was of the certificate of the electors. What was the result? That vote was counted, and properly counted. Suppose now that we have a law which provides that in case where only one return is made it shall be received and the vote counted unless both Houses agree to reject it, and apply that case to the particular instance which I have cited and see what the result would be.

We must first, Mr. Speaker, take into consideration the excited and passionate condition in which the minds of men are on such occasions, and the party that desires to have that vote counted will point to the law and say the law commands the two Houses to count the vote, because there is but one return. What will be said on the other side? Will it require much partisan ingenuity to be able to say: "We will recognize the law, it is true, but you have no return here at all. This is no return. It does not conform to the law." So that you have not provided for meeting a case that might arise under such a circumstance as that at all, and you are forever at sea.

Now, at this point it is proper that I should illustrate my other proposition, that this question is a judicial one in its nature. Let us suppose a case; here comes a paper purporting to be a certificate of the electors from a State. What sort of a function is it, let me ask, to determine the effect of that certificate, whether it shall be counted, whether in the first instance it shall be received and entertained as a vote or otherwise? Will any man say that is not a purely judicial function; that it is not an exercise of a judicial power? Certainly not. Again, I say that human language and human wit cannot forecast the future and provide for this or other such emergencies. Questions will arise which will require judicial determination. Who, Mr. Speaker, let me ask, would have been able to foresee a condition of affairs that would produce such a return as the one I have just referred to? What prophetic eye could have provided against a contingency of that kind? No candid man will claim that human ingenuity could have even imagined in advance such a condition.

In the election for the fifth term, counted in 1805, protests came in from various towns in Massachusetts against the count of the electors, on the ground that they had not been chosen in accordance with the State law. What sort of a function, allow me to ask, is it that would settle that question? Is it any other than a judicial function? Certainly not.

Again, in the eighth, ninth, and thirteenth elections, to which I will refer separately, the votes from Indiana, Missouri, and Michigan respectively were objected to on the ground that under existing statutes and the conditions they contained, and under the state of facts which were known to exist, the admission into the Union of the States had not been completed. Who is to settle that dispute? Is it not, too, a judicial function to settle and determine the result of that condition of fact and law?

Again, who can foresee and determine and provide by written enactments for the conditions, the manifold complications and perplexing conditions of fact that may exist at the time of a Presidential election with respect to any new State coming into the Union?

But there is another election to which I desire to refer. In the thirteenth election there were chosen as electors five men who were Federal office-holders, some from New Hampshire, some from North Carolina, and some from Connecticut. Now, all know that the Constitution provides that no man holding an office of trust or profit under the Government is eligible as an elector for President and Vice-President. But these men were chosen to that position and they voted. What is to be the result? Who is to determine the result? Is it not essentially a judicial function to determine what results shall follow this condition of facts? We all know that no State would consent to be disfranchised simply because by mistake some one had been chosen an elector who had been commissioned a Federal official, perhaps in years past, and who had forgotten the existence of the commission at the time of his election. No party would consent to accept defeat under such condition of fact unless the matter was tried and determined by the law of the land and by the properly constituted judicial tribunals of the land. Why, Mr. Speaker, in 1876 I think it was, a gentleman was chosen a Presidential elector who some twenty-five years before had been appointed for a temporary purpose only as a shipping commissioner. He had acted temporarily, abandoned the office, and had not thought of it for nearly a score of years; but the old commission was dug up, and it

was alleged by some that he was ineligible. Now, will you submit finally and conclusively such a question as that to any other tribunal than to a judicial tribunal? I apprehend not.

Again, in 1856 the electors for the State of Wisconsin failed to assemble together on the day fixed by law and cast their vote, because they were prevented by an unprecedented storm, so unprecedented as to be called an act of God. They met and voted on the succeeding day. What is to be done in such cases? Can they be foreseen? Can they be provided for by express enactment? Of course they cannot.

One word more and I will conclude. If you provide in the bill, as has been suggested, for a Congressional count, that where only one return is received from a State it shall be counted, unless both Houses agree to reject it, and where there are two returns—and that has been suggested—that that return shall be counted which, the two Houses concurring, shall agree is the proper one, you have then a definition of two classes of cases. But anybody can make a paper purporting to be a return, and when a paper purporting to be a return is handed to the Vice-President there are then in his hands two papers purporting to be returns; by that fact alone the preferred case is transferred over into the unpreferred class.

A little close examination and reflection will show that you can not provide by any language any definition of cases wherein the return shall be counted unless rejected by the two Houses that will prevent any such case from being transformed, by the act of the party interested, into the other class of cases which cannot be counted without the concurrence of the two Houses, so that you might as well provide in the first place that there shall be no return received and no vote counted without the concurrence of the two Houses. For if you have any class of cases which requires the concurrence of the two Houses to the counting of a vote you cannot define another class that cannot be transformed into the other. So that whether we like it or not, whether within or without the constitutional power of Congress, final and conclusive, a Congressional count in cases of serious dispute is utterly impracticable, unless we are willing to accept this result, and I see no remedy except a resort to the judiciary or the creation of a special tribunal with judicial power.

After further debate—

Mr. UPDEGRAFF, of Iowa. I expected this bill would encounter opposition. I did not expect it would excite so much resentment. Surely there is nothing in it to induce men to tear their clothes to tatters. The committee that reported this bill have at least not attempted any selfish object or pursued any selfish purpose. And yet it has been met here with a malignity, I think I may say, such as has seldom been exhibited on the floor toward any bill since I have had the honor to be a member of the House.

I want to say here and now and put it on record, that I am willing to stand upon that bill and to leave it to the judgment of enlightened patriotism hereafter to say whether or not it merits the maledictions it has received. It was not to be expected that there could be an agreement upon any measure affecting this subject unless there was a concession of views. There never, at least in recent years, has been an agreement reached in any House, I believe, after any considerable discussion, and it is impossible now to reach one without an unselfish, patriotic consideration of the provisions of the bill and a concession of personal views. For myself, I have been ready to make it, and I am ready to make it. It is more easy to destroy than to construct. I have said before that there could be no power conferred without objection; and I say again that gentlemen who object to this measure offer us nothing better. I believe I can truthfully say I can unselfishly and candidly consider any other proposition that will afford the country the relief which all demand. I do not think this bill has received that fairness of treatment here; but I cannot dwell longer upon that subject.

I wish to say a word with reference to the amendment offered by my friend from Indiana, [Mr. BROWNE.] If that amendment should be adopted the bill then is not such a one as I could support. I never can consent that the two Houses of Congress can exercise a final and conclusive jurisdiction over the electoral vote. The first sections of the bill contain those provisions, and I cannot assent to them standing alone. The gentleman from Georgia, [Mr. HAMMOND,] who addressed himself to the judicial features of the bill with so much feeling, declared that it should be denominated an attempt to organize hell. How organize hell? By submitting to the judicial tribunals of the country a question which bears upon the construction and interpretation of law? How hell is to be organized under a bill for the peaceable solution of all disputes is more than I can comprehend.

I agree with the gentleman from Georgia when he says that the person receiving the highest number of electoral votes shall be the President. Ay, that is the ultimate fact to be determined, the ultimate fact to be ascertained by the court. How is that ultimate fact to be tried? How is it to be determined? Is there any other way than by the judiciary of the country? The solution and determination of that ultimate fact involve the construction and interpretation of all the laws on the subject of thirty-eight States. They involve a wide field of legal interpretation and legal construction under our form of government and under our Constitution. Who in the name of Heaven is to try a dispute when one man says that A

has received the highest number of votes and another says that B has received the highest number? Who under Heaven is to determine the question if the courts of the country are not to do it? Certainly no enlightened lawyer after a consideration and study of the question will say that the ultimate decision ought to be in the legislative body, which is denied the power to exercise judicial functions.

My friend from Massachusetts [Mr. BOWMAN] and my friend from Georgia [Mr. HAMMOND] both thought there was something very absurd in submitting a disputed Presidential election, as they termed it, to a circuit court of the United States and a petit jury. And when did the circuit courts of the United States and a petit jury become contemptible among Anglo-Saxons? The jury must, under our Constitution, as I read it, have the right to determine pure questions of fact. We cannot provide in a bill that no jury trial shall be had, and obey the Constitution. Therefore, the jury trial was permitted in the bill; that is, the trial of special facts, special issues of fact. We could not do otherwise, and we did that. There is, however, a control over the findings of fact by the jury which the common law has always acknowledged, and which the circuit courts of the United States yet exercise. After the trial in the circuit court there is an appeal to the Supreme Court of the United States, and I may say here that there can be but a narrow field of fact to be inquired into in a contested Presidential election, except it be in the boundaries of the States respecting the choice of electors; and with that the Federal authority has no concern whatever, and over it no power.

But after the domain of Federal or national cognizance is entered, where there may be sometimes disputed questions of fact, the field is very narrow indeed, and it was thought better to allow that provision to go into the bill, in view of the Constitution of the United States and of the limited danger which might come from it.

Mr. TYLER. Will the gentleman allow me to ask him one question?

Mr. UPDEGRAFF, of Iowa. Certainly.

Mr. TYLER. The Constitution provides that—

The electors shall meet in their respective States, and vote by ballot for President and Vice-President, one of whom, at least, shall not be an inhabitant of the same State with themselves; they shall name in their ballots the person voted for as President, and in distinct ballots the person voted for as Vice-President, and they shall make distinct lists of all persons voted for as President, and of all persons voted for as Vice-President, and of the number of votes for each, which lists they shall sign and certify, and transmit sealed to the seat of the Government of the United States, directed to the President of the Senate.

Now, it might be the case that the question to be litigated under the provisions of this bill would arise on some of these certificates. I desire to inquire of the gentleman if he thinks the President of the Senate could be divested of the custody of these certificates for the use of a court, or that he could be compelled by a subpoena *duces tecum* to take these certificates away from the seat of Government and produce them in a court in some remote part of the country? By implication, at least, he is their custodian at the seat of Government. Would he have a constitutional right to take them away from the seat of Government and produce them in a court?

Mr. UPDEGRAFF, of Iowa. I think he would have; but whether or not the Vice-President is the sole custodian of these certificates is a question I must decline to discuss at this time. There is no practical difficulty in the matter, in my mind.

With respect to the bill under consideration, I hope I may be pardoned for speaking of myself for a moment when I say I have discharged my duty in the matter as well as I was able. I and other members of the committee have given this subject our careful and conscientious consideration. We offer here to this House the best bill that we are capable of preparing. The responsibility is now with the House, not with us.

I venture to say further that there never will be a solution of this question except in the manner indicated in this bill. The bill may have faults of detail; I presume it has; but I venture the prediction that no solution of this troublesome question will ever be reached except in the direction pointed out by this bill. Why? Because every question in a disputed Presidential election is sent by our Constitution to the judicial department of this Government, and that Constitution will be and must ultimately be obeyed.

The lawyers of this country, the people of this country, will never, never consent that a disputed Presidential election shall be settled by two partisan bodies in the heat of political excitement. We have therefore given you the best thing we could offer you, and you will never have a better one, save in the perfection of its details, I am well assured. I am content to stake upon that prediction my reputation as a prophet.

I have now said about all I desire to say. I respectfully submit the work of our committee to this House and to the country, content with whatever reception may be accorded to it, knowing that if we have not succeeded we have attempted a duty on which success was next to impossible, and that in these closing days of a long session this House is in no temper for the consideration of this subject. I believe we deserve a better reception than has been manifested toward us upon this floor. I earnestly hope that the proper concessions will be made and that both sides of the House will give the bill a sufficient support to secure its passage. I cannot perhaps say any better single thing of the bill itself than that it elicits no warm and united partisan support.

Geneva Award.

SPEECH

OF

HON. OSSIAN RAY,

OF NEW HAMPSHIRE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, May 11, 1882,

On the bill re-establishing the court of commissioners of Alabama claims, and for the distribution of the unappropriated moneys of the Geneva award.

Mr. RAY said:

Mr. SPEAKER: The treaty of Washington, negotiated between the United States and Great Britain, was concluded May 8, ratified June 17, and proclaimed by President Grant July 4, 1871. This treaty provided, among other things, for the establishment of a tribunal of arbitration for the adjudication and settlement of the so-called Alabama claims. The provisions of the treaty material to this discussion are:

ARTICLE I.

Whereas differences have arisen between the Government of the United States and the Government of her Britannic majesty, and still exist, growing out of the acts committed by the several vessels which have given rise to the claims generically known as the "Alabama claims;" and

Whereas her Britannic majesty has authorized her high commissioners and plenipotentiaries to express, in a friendly spirit, the regret felt by her majesty's government for the escape, under whatever circumstances, of the Alabama and other vessels from British ports, and for the depredations committed by those vessels:

Now, in order to remove and adjust all complaints and claims on the part of the United States, and to provide for the speedy settlement of such claims which are not admitted by her Britannic majesty's government, the high contracting parties agree that all the said claims growing out of acts committed by the aforesaid vessels, and generically known as the "Alabama claims," shall be referred to a tribunal of arbitration, to be composed of five arbitrators to be appointed in the following manner, that is to say: one shall be named by the President of the United States; one shall be named by her Britannic majesty; his majesty the King of Italy shall be requested to name one; the President of the Swiss Confederation shall be requested to name one; and his majesty the Emperor of Brazil shall be requested to name one.

ARTICLE II.

The arbitrators shall meet at Geneva, in Switzerland, at the earliest convenient day after they shall have been named, and shall proceed impartially and carefully to examine and decide all questions that shall be laid before them on the part of the Governments of the United States and her Britannic majesty, respectively. All questions considered by the tribunal, including the final award, shall be decided by a majority of all the arbitrators.

ARTICLE VI.

In deciding the matter submitted to the arbitrators they shall be governed by the following three rules, which are agreed upon by the high contracting parties, as rules to be taken as applicable to the case, and by such principles of international law, not inconsistent therewith, as the arbitrators shall determine to have been applicable to the case:

RULES.

A neutral government is bound—

First. To use due diligence to prevent the fitting out, arming, or equipping within its jurisdiction of any vessel which it has reasonable ground to believe is intended to cruise or to carry on war against a power with which it is at peace; and also to use like diligence to prevent the departure from its jurisdiction of any vessel intended to cruise or carry on war as above, such vessel having been specially adapted, in whole or in part, within such jurisdiction to warlike use.

Secondly. Not to permit or suffer either belligerent to make use of its ports or waters as the base of naval operations against the other, or for the purpose of the renewal or augmentation of military supplies or arms or the recruitment of men.

Thirdly. To exercise due diligence in its own ports and waters, and as to all persons within its jurisdiction, to prevent any violation of the foregoing obligations and duties.

Her Britannic majesty has commanded her high commissioners and plenipotentiaries to declare that her majesty's government cannot assent to the foregoing rules as a statement of principles of international law which were in force at the time when the claims mentioned in Article I arose, but that her majesty's government, in order to evince its desire of strengthening the friendly relations between the two countries and of making satisfactory provision for the future, agrees that in deciding the questions between the two countries arising out of those claims the arbitrators should assume that her majesty's government had undertaken to act upon the principles set forth in these rules.

And the high contracting parties agree to observe these rules as between themselves in future, and to bring them to the knowledge of other maritime powers, and to invite them to accede to them.

ARTICLE VII.

The decision of the tribunal shall, if possible, be made within three months from the close of the argument on both sides.

It shall be made in writing and dated, and shall be signed by the arbitrators who may assent to it.

The said tribunal shall first determine, as to each vessel separately, whether Great Britain has, by any act or omission, failed to fulfill any of the duties set forth in the foregoing three rules or recognized by the principles of international law not inconsistent with such rules, and shall certify such fact as to each of the said vessels. In case the tribunal find that Great Britain has failed to fulfill any duty or duties as aforesaid it may, if it think proper, proceed to award a sum in gross to be paid by Great Britain to the United States for all the claims referred to it; and in such case the gross sum so awarded shall be paid in coin by the Government of Great Britain to the Government of the United States, at Washington, within twelve months after the date of the award.

The five arbitrators were Hon. Charles Francis Adams, of the United States; Sir Alexander Cockburn, of England; Count Frederick Sclopis, of Italy; Mr. James Staempfli, of Switzerland, and Viscount Itajubá, of Brazil. The tribunal met at Geneva, in Switzerland, the

15th of December, 1871, held a session of two days, and then adjourned to the 15th of June, 1872, when it reassembled at Geneva and remained in session until its labors were concluded and its decision and award published, September 14, 1872. In respect to the Alabama, the arbitrators were unanimously of opinion Great Britain had failed by omission to fulfill her duties as a neutral power; in respect to the Florida, by a majority of 4 to 1, they held Great Britain had also failed by omission to fulfill her duties as a neutral power; and in regard to the Shenandoah the arbitrators, by a majority of 3 to 2, held Great Britain had also failed by omission to fulfill her duties as a neutral power from and after the Shenandoah's departure from Melbourne, February 18, 1865.

These three vessels have been called the inculpated cruisers. As to all other confederate vessels complained of, called the exculpated cruisers, the tribunal declared Great Britain to be not guilty. Fifteen and a half million dollars in gold were awarded as an indemnity, including principal and interest, to be paid by Great Britain to the United States for the satisfaction of all the claims referred to their consideration under the treaty.

September 9, 1873, Great Britain paid to the United States the amount of the award. The same day the money was invested in United States 5 per cent. bonds, pursuant to the act of Congress approved March 3, 1873.

The Forty-third Congress passed the act of June 23, 1874, establishing the court of commissioners of Alabama claims, and provided for the examination, allowance, and payment of all claims presented to the court directly resulting from damage caused by the insurgent cruisers, the Alabama, Florida, and the Shenandoah after her departure from Melbourne. That act also provided that when any claimant had received compensation or indemnity toward the loss or damage actually suffered by him the court should deduct the amount received and allow the claimant to recover the balance or remainder only. (18 Statutes at Large, page 247, chapter 459, sections 11 and 12.) In other words, Congress, in respect to damages done by the inculpated cruisers, adopted the principle of allowing compensation for net losses only.

Pursuant to the act of June 23, 1874, \$9,316,120 were distributed among claimants. March 31, 1877, \$9,553,800 of the fund was in the Treasury of the United States. Since then it has drawn no interest.

It appears therefore that we have \$10,000,000, in round numbers, remaining in the Treasury which was paid by Great Britain to settle the Geneva award. What was it paid for? It was not paid for the benefit of American insurance companies; it was not paid to reimburse the war-premium men; it was not paid because the property of some of our citizens had been destroyed by the exculpated rebel cruisers. But it was paid on account of the destruction of property of American citizens by the inculpated cruisers—the Alabama, the Florida, and the Shenandoah after it left the British port of Melbourne. The \$15,500,000 which England paid into our Treasury was England's money before it was paid to us. After payment it became the money of the United States. It became the property of the Government, and not the property of any citizen or corporation here. It was thus paid and received pursuant to the treaty of Washington, in negotiating which the United States Government expressly reserved the right to distribute among its own citizens whatever sum the tribunal of arbitration might award in its favor according to its own will and pleasure.

Our Government distinctly refused when demanding and receiving the money to accept it on behalf of any private claimant. Mr. Fish, the Secretary of State, gave the following instructions to the counsel for the United States:

The President desires to have the subject discussed as one between two governments. In the discussion of this question and in the treatment of the entire case, you will be careful not to commit the Government as to the disposition of what may be awarded. The Government wishes to hold itself free to decide upon the rights and claims of insurers upon the term, nation of the case. If the value of the property captured or destroyed be recovered in the name of the Government, the distribution of the amount recovered will be made by this Government without commitment as to the mode of distribution.

These instructions were obeyed to the letter. The counsel conveyed the demand of their Government to the tribunal in these words:

These claims are preferred by the United States as a nation against Great Britain as a nation, and are to be so computed and paid, whether awarded as a sum in gross, under the seventh article of the treaty, or awarded for assessment of amounts under the twelfth article.

Distribution by our Government means the concurrent action of the Senate and House of Representatives upon the subject, with the approval of the President.

What has been done with the rest of this Geneva award money? About \$10,000,000 was distributed under the act of Congress passed June 23, 1874. To whom was it distributed by the provisions of that act? To those only whose property had been destroyed by the three inculpated cruisers. On what principle was that distribution made? Upon the principle of net loss, and that alone.

The doctrine of reimbursement for net loss is sound; it is equitable; it is just. Distributing the remainder of the fund upon that principle is the only fair way of disposing of the money. The doctrine of double reimbursement, or the payment of gross losses, was carefully prohibited by the terms of the act of 1874.

By that act of Congress nobody had any standing before the court

of commissioners of Alabama claims except those whose property had been destroyed by the inculpatated cruisers, and every claimant was bound to account for all compensation or indemnity received by him from any insurance company or otherwise, and could recover only the balance of damage actually suffered, or, in other words, his net loss. And if an insurance company preferred a claim before the commissioners for allowance it was bound by the provisions of the statute to show to the satisfaction of the court that the amount of its losses by war risks during the late rebellion exceeded the amount of its war premiums, and recovery was allowed only for the excess of loss.

Under the express provisions of section 12 of that act any insurance company or insurer of property damaged or destroyed by the three insurgent cruisers named had the right to recover any balance of loss after showing to the satisfaction of the court that during the rebellion "the sum of its or his losses in respect to its or his war risks exceeded the sum of its or his premiums or other gains upon or in respect of such war risks; and in case of any such allowance the sum shall not be greater than such excess of loss." (18 Statutes at Large, page 248.)

Under the provisions of the act of 1874 balances of war premiums were allowed to insurance companies, as follows: The New Bedford Commercial Mutual Marine, \$2,531.35; New Bedford Ocean Mutual, \$17,425.86; New Bedford Mutual Marine, \$66,526.25. (See cases 1089, 1093, and 1098, court of commissioners of Alabama claims, and report of Secretary of State on the same.) The Newburyport Merchant Marine Mutual also received about \$2,500.

It is a curious and interesting fact, therefore, that the insurance companies alone (such as obtained reinsurance in other companies upon property covered by their own policies in order to save themselves from loss) obtained allowance by the act of 1874 for the amount of war premiums paid by them when their accounts showed a net loss in respect to property destroyed covered by their own policies.

Thus far at least, by act of Congress and by adjudication of the court, a precedent for the payment of war premiums has been established. If it was right to allow insurance companies for war premiums paid to other offices for reinsurance, it cannot be wrong to pay war premiums to merchants and ship-owners as long as the funds hold out. On the principles established by Congress in the former act, of reimbursing net losses only, I think few will now contend that insurance companies ought to be paid except they establish a net loss as before, pursuant to the provisions of section 12 of that act.

The question recurs, what shall we do with the balance in the Treasury? Shall we continue its distribution, governed by the cardinal principles of the act of 1874, by making reimbursement for net losses only, as the bill reported by the majority of the Judiciary Committee provides? Or shall we give the money to the insurance companies, who in fact lost nothing while the war lasted, but on the contrary during that trying period fattened upon the misfortunes of their countrymen. The balance of this fund still belongs to the Government, just as the whole did when it was paid. The Government owns the money absolutely. The whole title to the award, both legal and equitable, vested in the United States. The Government has neither received nor held this money as a trustee for anybody. The best considered legal authorities here and in England clearly and fully sustain these views. Any distribution is an act of grace, morality, and good conscience on the part of the Government toward its citizens.

I regret that some have said in this discussion, "Let the Government keep this money," and are opposed to any distribution. To my mind, sir, such a course, under the circumstances, would fall little short of national dishonor. Better let the insurance companies have what remains, or divide it *pro rata* among those who have been paid already.

Gentlemen seem to forget the fact that this fund was not paid or received for the loss of Government property. Indeed the Government lost little or no property by the confederate cruisers. Loyal citizens appealed to the Government in vain for protection to person and property on the high seas during the war. Hence nearly all of our prudent business men owning or sailing or using American ships, in order to save themselves from impending financial loss or ruin, were obliged to obtain insurance against war perils by the payment of heavy war premiums. The war-premium men, while the rebellion was flagrant and ever since, have borne equally with all other good citizens their proper share of the national burdens. They paid their taxes; they experienced all the ordinary risks of commerce and vicissitudes of trade which others did who patronized foreign vessels, and they paid millions of dollars to insurance companies besides. Good judges have estimated that the insurance companies paid out in losses only about \$5,000,000 on account of war risks, while they received in war premiums about \$10,000,000.

In this connection I desire to quote from the able and convincing argument of Samuel Stevens, esq., of Boston, Massachusetts, before the House Judiciary Committee, himself a heavy loser by the enforced payment of war premiums in the transaction of his business as a merchant and ship-owner in the Australian trade at Melbourne:

It is probable that more than half the war premiums were paid on ships and outfits, or freights and charters, and it can be demonstrated that owners of vessels not only suffered the loss of war premiums paid by them on hulls and freights but were also obliged to pay war premiums on the gold value of their cargoes in order

to secure freights, or to suffer a reduction in the rates of freights or charters, as compared with rates obtainable under foreign flags all over the world, resulting in almost a prohibition to their carrying valuable cargoes.

Prudent business men did insure their ship property against capture, especially in large commercial cities, where individual ownership was large. Exculpated cruiser claimants had the same opportunities to insure, and neglected them. Had they improved them, their losses would have been paid by insurance companies, and thereby they would have contributed to the balance of the fund now remaining in the Treasury in consequence of war premiums having been paid, and they would then have had the same equities in that fund as we who did pay war premiums. Had there been no war premiums paid there would not have been any war losses paid by insurers, and the greater part, if not the whole of the balance of the fund would have been paid out, to cover the value of the property destroyed, and we submit that war premiums ought to be first considered.

It is doubtful if merchants generally made money during the war, as has been alleged in the Senate. If, however, they did, it has no bearing on war-premium claims. We all bore our shares of the burdens of war. We paid heavy taxes of which we did not complain and accepted all the ordinary contingencies of profit and loss in our business, just as those who were sufferers by inculpated cruisers did; but we paid war premiums in consequence of the unusual hazard created by the appearance of confederate cruisers on the high seas with the special object of destroying our property, and for which payments the United States has received compensation, certainly to that extent which the balance of the Geneva award fund is now held by reason of war losses paid by insurance companies, which, had it not been for the payment of war premiums, would have been paid out under the rulings of the court of commissioners of Alabama claims.

In this connection the following terse and comprehensive letter from George M. Barnard, esq., of Boston, Massachusetts, an extensive and reputable importer, shows conclusively that the argument of Senator EDMUNDS and others who have opposed any distribution of the fund among those who paid war premiums, in substance, because the importer realized whatever amount he was compelled to pay in the shape of war premiums, out of the profits obtained upon the sale of his goods, is unfounded and fallacious:

WASHINGTON, January 30, 1882.

GENTLEMEN: As the "Geneva award" is soon again to be considered by the Senate, and as there seems to be a strange misunderstanding of the actual loss of the war-premium claimants, I beg to state that I imported teas largely from China. In order to do this I was compelled to use letters of credit on London, which I could not obtain except on the condition that I would provide insurance against all risks, including that of war. The teas were shipped by American vessels, liable to capture. I was therefore compelled to pay war premiums.

My neighbor imported teas by British vessels, and thus avoided the additional cost of war premiums. But the teas being alike, they could be sold only at the same price, and I thus lost the whole war premium. Nor was the war premium reimbursed by a corresponding advance in general market prices, as these were kept down not only by direct importations under foreign flags but also by importations by steam or sail from the nearer markets of England, where were always large supplies, and whence they came whenever our prices in gold got above the English prices in gold. All foreign goods could be bought only for gold, and when I sold here for paper money brought only so much gold as the paper money would buy, which, when gold was at 280, was only 36 cents in gold for 100 cents in paper.

Respectfully, yours,

GEORGE M. BARNARD,
Of Boston.

To Hon. H. L. DAWES and Hon. G. F. HOAR,
Senators from Massachusetts, United States Senate.

A number of prominent citizens and business firms in my own State, New Hampshire, also suffered to a considerable extent from the payment of war premiums, as the following schedule showing the amounts paid by each indicates:

Abbott, J. S. & A. E.	\$630 55
Downing & Sons	7,711 50
Jones, William P.	30,507 75
Lambert, William	1,638 50
Parrott, William F.	22,625 99
Richmond & Loring	2,210 37
Sise, Edward F.	4,897 00
Tredick, T. S.	12,479 51
Tredick, J. M.	8,260 50
Williams, Washington	3,410 00
Walker, Horton & Co.	12,765 76
Total	107,137 43

In addition to the above, P. B. Holmes, of Greenland, as I am told, expended about \$25,000 for war premiums, and Hon. Daniel Marcy, of Portsmouth, also paid a considerable amount during the rebellion on the same account.

I think the war-premium men have the strongest equitable right to the balance of the fund in the Treasury of any class of claimants. The committee's bill provides, first, for the payment of those who suffered losses from the exculpated cruisers, and then the balance goes to the war-premium men. Now, the exculpated-cruiser men took their chances. They purposely omitted to insure; they sailed with the peril of rebel capture and destruction before their eyes; they traversed dangerous seas with full knowledge of the enemy's presence in overpowering force, and as might reasonably have been foreseen and expected many vessels and cargoes were lost, whereas, had they paid war premiums and obtained insurance, as prudent and careful business men ought to have done under the circumstances, that would have been their only practical loss. But there is enough money in the Treasury for both classes of claimants if we do not allow the insurance companies to get four or five millions of dollars to which they are not entitled legally, equitably, or morally.

The insurance companies claim to participate in this distribution of the remainder of the Geneva award by right of subrogation. They contend because they have paid their policies of insurance placed upon vessels and cargoes destroyed by the inculpated cruisers, and because the owners of such vessels and cargoes were required to

deduct from the value thereof whatever had been received as insurance, that a share of this money rightfully belongs to them according to the doctrine of subrogation. What is subrogation in a legal sense? It is the substitution of one person in the place of another, and giving him the other's rights; it is the mode by which a third person who pays a creditor succeeds to the creditor's rights against the debtor.

Clearly upon the admitted facts before us no right of subrogation exists in favor of the insurance companies. As between the insurer and the assured whose property was captured or destroyed, the relation of debtor and creditor arose from the terms of the policy or contract. Upon payment of the loss by the insurer or debtor the creditor's debt was extinguished. But there was nothing left of the property itself, or any right of action growing out of its capture or destruction into which the insurer could by any possibility be subrogated. The title to a vessel or cargo was *ipso facto* changed upon its capture. It became the captor's property by force of arms and the laws of war.

Both parties to the insurance policies were the subjects and citizens of the United States, one of the belligerents in the late civil war. When the land or naval forces of the confederacy captured the property of the United States or of its citizens on land or sea the confederacy did not become a debtor to anybody on account of the capture, in any legal or equitable sense whatever. Neither the owner of the property insured nor the insurance company who paid a loss under such circumstances had any claim of any sort against the confederate government. Much less did either party to the policy have a claim against England for the loss on account of her omission to fulfill the duty of a neutral power toward the belligerents. And still less did either party acquire a claim against the United States by subrogation in any legal or equitable view, as understood or decided by the courts, on account of the recovery of the \$15,500,000 of Great Britain before the tribunal of arbitration at Geneva. We see therefore that the doctrine of subrogation—the only ground upon which the insurance companies base their claim to share in the distribution—has no application to the matter before us. Of all the claimants the insurance companies have the least pretense of right to participate in the distribution of the balance of the fund.

In an opinion given by the late Hon. Caleb Cushing, one of the counsel of the United States at Geneva, on the distribution of the Alabama award, he expresses the following cogent and unanswerable views:

8. The award is to the United States, in conformity with the letter of the treaty, which has for its well-defined object to adjust and remove complaints and claims on the part of the United States.

The history of the treaty and of the arbitration, however, tends to show that it was the intention of the Government to exercise its own discretion, according to its own sense of justice and equity, in the distribution of indemnity among citizens of the United States, whether owners, mariners, insurers, or payers of premiums, who are actual losers by the acts or neglect of the British Government.

But like examination of the acts of the Government tends to show that it was the intention of the Government not to recognize any right of subrogation on the part of insurance companies, but to consider them only in so far as they were actual losers, on the whole, by the cruisers of the confederates, and, as such, claimants against the United States.

9. Enhanced payments of insurance were disallowed by the tribunal, as national claims of the United States against Great Britain.

But the Government has not the less right, in the equitable distribution of the fund, and in the adjustment of losses, as respects premium payers and premium receivers, to indemnify those who have actually lost in paying premiums, instead of adding to the gains of those who have profited by the receipt of premiums.

10. Great Britain has no concern whatever with the manner in which the fund is disposed of by the United States.

If the fund be insufficient, we have no recourse on Great Britain; if there be a surplus, she has no recourse on us.

For, according to the words of the treaty, "each and every one of the said claims" are finally settled, "whether the same may or may not have been presented to the notice of, or made, preferred, or laid before the tribunal." (Article XVII.)

The minority report proposes to refer the claims of all persons and corporations to any portion of the Geneva award money to the Court of Claims. The minority bill proposes to allow all such parties to bring suit in the Court of Claims and allow that court to render a judgment for such amount as they shall think the claimant is justly entitled to recover under the treaty and award, "according to the principles of justice and equity and the laws of nations." (Section 1.) Section 3 provides that such persons and corporations may appeal to the Supreme Court of the United States. Now, this very right of appeal involves long delays. The insurance companies, if beaten in the Court of Claims, would not hesitate to appeal to the Supreme Court; and in the ordinary course of procedure in that court from three to four years would elapse before judgment. Even then I venture to say that the claims of the insurance companies would not be sustained.

Indeed it is quite possible under the loose phraseology of the minority bill the court would decide, in view of the peculiar and exceptional character of the treaty and award, that no class of claimants were entitled, according to the principles of justice or equity as understood and administered in our courts, or the law of nations, to recover this money out of the Treasury. On the contrary, it is quite clear to my mind, as suggested in the very able report of the majority of the Judiciary Committee of this Congress that, in order to distribute this fund justly, we should be governed by a more enlarged and liberal view of the rights of individuals and the duties of the

Government toward its citizens than obtains at law or equity as understood and administered by our courts of justice.

Hence, the necessity of prescribing by law, as a guide for the court which is to act in the premises, not only the rules under which distribution shall be made but also the beneficiaries who may participate therein.

We are here to do the will of our constituents, whose public servants we are. Will any gentleman on either side of the Chamber assert that the constituency which elected him would vote in favor of allowing the insurance companies to receive a share of this fund after having already had their day in court and recovered their net losses? I do not believe a Congressional district in the Union would so decide.

In the decision of this matter we ought to reflect the will of those who sent us here, and whom we have the honor to represent.

To distribute this fund at all you are obliged to adopt the doctrine which is so well and ably stated in the majority report by the honorable chairman of the Judiciary Committee, [Mr. REED,] namely, those broad and comprehensive principles of equity and good conscience which ought to obtain in all the dealings and transactions between a just government and its citizens.

Hennepin Canal.

The lake and river navigation of the great West very early had a share of my attention and I never had a doubt of the constitutionality or expediency of bringing that navigation within the circle of internal improvement by the Federal Government, when the object to be improved should be one of general and national importance.

The junction of the two great systems of waters which occupy so much of our country—the northern lakes on one hand and the Mississippi River and its tributaries on the other—appear to me to be an object of that character, and Chicago the proper point for effecting that union.—Thomas H. Benton.

SPEECH

OF

HON. GEORGE R. DAVIS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 25, 1882,

On concurrence in the Senate amendments to the river and harbor bill.

Mr. DAVIS, of Illinois, said:

Mr. SPEAKER: When the question of concurrence or non-concurrence to the Senate amendments to the river and harbor bill was before the House a few days since the friends of the project known as the Hennepin Canal were willing that this amendment should take the same course as the others, be non-concurred in, and the conference committee given the opportunity to meet, consult, and report before the subject was discussed in the House; but so soon as this amendment was reached it was pounced upon by a few self-constituted expounders of the Constitution, and the project characterized as something beyond the limits of the Constitution, a hydra-headed monster which should be knocked in the head on sight; and these gentlemen proceeded to perform this service to the utmost of their ability. Opportunity was not then given the friends of the measure to fully reply.

I avail myself of this present opportunity to briefly reply and to set forth some of the reasons which have led me to give my support to this measure; but before proceeding to speak upon the merits of the project I ask the indulgence of the House for a few minutes to invite attention to some of the arguments which have been advanced in opposition to the measure, and especially to those contained in the speech of my distinguished friend from New York, [Mr. DWIGHT,] printed in the RECORD of the 20th of July.

My friend from New York, and I understand some of the others who have been prominent in their opposition to this improvement, are directors in railway companies or are interested in railway transportation lines, honorable and eminently proper positions to occupy and laudable enterprises.

The friends of this measure are making no war upon railroads. They are as friendly to that character of transportation as becomes a member of this House.

The people of Illinois and the city of Chicago have derived as much benefit from that source as any people on this continent, which they recognize and appreciate, and no railways have been better received, been more generously encouraged, been more prosperous, or derived greater benefits from a people than those roads which are located in that State. Illinois has to-day more miles of railway than any other State, and her chief city is the largest railway center in the world. The stock of every road which will come in competition with the proposed canal is worth from 130 to 140, and the road which meets the Illinois and Michigan Canal and the Illinois River in competition is rich and powerful.

We give these roads every encouragement, and shall continue to do so so long as they remain in the character of public servants. But the idea that has been advanced, the special pleading that leads one to believe that the stockholders and directors of a railroad have as much right to do as they please with their road as another would with private property of his own I object to, for I do not admit that any such a right is vested in them. Every railroad owes its existence to rights granted by the people through the State's right of eminent domain. States cannot condemn property for private purposes, and private property cannot be so created. The State acts in this regard for the public good and for public convenience, and a railroad that denies its character as a public servant renounces its franchise.

The people have long since become aware that a multiplicity of railroads does not necessarily secure competition. The only competitor of railway transportation in this country is water transportation; so proven, so known, and so acknowledged by those who have studied the question.

In my friend's speech he attempts to demonstrate the uselessness of canals, and points to the experience of his own beloved State of New York as a beacon to light the pathway of those who wish to engage the Government in works of this character, and asserts that railroads have become ruinous competitors to the carrying trade on the canals. To such an extent is this so that he regards it as folly to seriously consider the subject of constructing a canal.

This statement is not so surprising coming from him, for he has apparently studied only the question of the earnings of a canal as he would the earnings of his railroad, and not the service the canals render the public. As the gentleman is incorrect in his premises, he cannot assume to be accurate in his conclusions. He submits in his argument to fortify his position a statement showing that the tolls on 5,775,220 tons of freight in 1866 were \$4,426,639, and that in 1880 the tolls on 6,457,656 tons of freight were but \$1,155,419; that is, the tons in 1880 exceeded those of 1866 by 682,436 tons, were tolled through the canal at a less cost by \$3,271,220. And this is advanced as an argument in support of his proposition that railroads are ruinous competitors of the carrying trade on canals and that canals are useless. He loses sight entirely of the purposes of the canal. The canals, like the improvement of our water-ways, are for the public good and public convenience as much as the jetties on the Mississippi, and every canal operated by the Government is as free as the water-ways, and this should be so; they are not constructed or operated for profit. Is it expected that the Government is to charge tolls on the canal from Harlem River to the Hudson, which is to cost more than \$2,000,000? Now, for a moment let us analyze his statement that the railroads have caused this great reduction of tolls on the Erie Canal, and see if his argument supports his proposition.

In 1870 his statement shows 6,173,769 tons of freight tolled through the canal at a cost of \$2,611,578; in 1880, 6,457,656 tons at a cost of \$1,155,419, or more freight by 273,887 tons at a cost less by \$1,456,159. I have not the rate on freights for these periods on the New York railroads, but the through rate on grain, all rail, Chicago to New York, March 4 to October 31, 1870, was from 40 cents to 50 cents per 100 pounds; in 1880 the through all-rail rates, Chicago to New York, March 8 to October 31, 1880, on grain were 30 cents to 35 cents per 100 pounds—a difference of from 10 to 15 cents per 100 pounds.

This being the through rate from Chicago, it will be seen that there could be no reduction between Buffalo and New York on the New York roads to warrant any such a reduction on the tolls of the Erie Canal. The reduction on through rates being but 10 to 15 cents for some 900 miles by rail, the *pro rata* reduction from Buffalo to New York could not have been more than from 3 to 5 cents per 100 pounds. And this cannot be regarded as a cause for reducing the tolls upward of 60 per cent. And further, in 1881, the tolls were reduced to \$632,389 for tolling 5,175,505 tons of freight, a reduction of nearly 50 per cent. from the tolls in 1880, with no change in the through all-rail rates.

No, it is not the ruinous railroad competition which has caused the reduction of the tolls on the Erie Canal. We must look elsewhere for the cause.

I will take the two items of corn and wheat, and the movement of these two alone is sufficient to warrant the construction of the Hennepin Canal. Now, of the 116,369,222 bushels of corn and wheat shipped from Chicago to the seaboard last season, 89,564,278 bushels were shipped by water. This surely does not show any diminution of quantity forwarded by water by reason of any serious competition by the railroads.

It is not this ruinous competition that is troubling your great Erie Canal; it is not the railroads which have caused the State of New York to remove the exorbitant and enormous charges which obtained for a period of more than thirty years on the transportation of grain and provisions from the granary of the West through your great canal, paying you a surplus estimated at \$72,000,000; it is not that. The trouble lies further north, in the Dominion of Canada, where extensive internal improvements have been made and are fostered; it is the Welland Canal and the Saint Lawrence route to the seaboard, which received last season from Chicago one-third as much corn and wheat as all the railroads combined leading from Chicago, (6,724,341 bushels.) This route is becoming popular and its business is increasing each year, and the city of New York would receive an infinitesimal

quantity of the hundred millions of bushels of grain forwarded annually from Chicago to the seaboard if nothing but rail transportation could be provided.

The lakes and the Erie Canal furnish a much cheaper route than by rail. The immense exportation of grain from New York City is secured in this and in no other manner. The State of New York, to retain this, will reduce her toll charges to the minimum or make the canal free for this and for no other reason. The water-route through the Dominion of Canada is the only competition the Erie Canal need fear.

The Erie Canal has been, is, and will continue to be a great blessing not only to the State of New York but to millions of the people outside of New York, and it should now be made free. In a recent issue of the Chicago Tribune I find this short editorial relating to this very question:

The friends of free canals in New York are getting somewhat alarmed at the prospect of the popular vote to be taken in that State this fall on the amendment to the constitution making the Erie Canal free of tolls. The State of New York has collected from the Erie Canal tolls enough to cover its original cost, all its enlargements, all its repairs, all its salaries, and all the money it has wasted and squandered by disgraceful contracts, and has paid into the State treasury a surplus of \$75,000,000 cash. It is time for the State to relinquish this enormous tax on the great highway over which the wealth of the country has been pouring into the State for fifty years, and which has made New York City the great commercial port of the nation.

The transportation of the country has far exceeded the wildest anticipations of the most sanguine. There are now 107,000 miles of railway in operation, and the Erie Canal still serves the country as a regulator and guide, controlling the cost of transportation on the merchandise which moves to and fro on this highway of the nation. Do the people of New York estimate what the difference of tax to the whole country is to put on or take off a toll of one mill per ton per mile on the merchandise transported across the United States annually? To continue these tolls on the Erie Canal at this day of progress and civilization would be a scandal to the intelligence and commercial spirit of New York. It would be on a par with placing toll-gates on Broadway and making foot-passengers and vehicles contribute to maintain the streets of the great city. There can be no question that should the State of New York now reject this proposed amendment and thus perpetuate the tolls on the Erie Canal for several years to come that the Canadians will open their gates free to all vessels, and thus reduce transportation by that route to Montreal and make that port the depot for the foreign trade to and from the West.

Further along in the speech of my friend, a speech carefully prepared, studied, and revised before publication, after complimenting some of the distinguished citizens of his State who were instrumental in starting and completing the great project of the Erie Canal, paying high and deserved tribute to their wisdom and sagacity for originating this grand work, which he regards as useless, he is pleased to advise us that Illinois has received large grants of land for canal and railroad purposes. In this connection I wish to emphasize a historical fact. The Government, for once in its life, seemed to have been inspired by that characteristic enterprise which is proverbial of the people of the State of Illinois and synonymous with the name of Chicago.

It wisely entered into a real-estate enterprise; with confidence well placed in the people, it trusted that good returns would be the result. Its confidence was not misplaced; and of all the lands it granted for this purpose it retained an equal proportion, and as eligibly located as those it granted. Withholding these lands from the market for a time, until contemplated improvements were well under way, it sold them for a sum which exceeded by nearly \$9,000,000 the original Government value of all it granted and all it withheld. Further, it has received in the deduction of 33½ per cent. of what otherwise would have been due and paid for the transportation of an army of soldiers and prisoners, immense quantities of supplies and freight transported through the State on the railroad which the gentleman is pleased to say the Government gave us, a sum nearly, if not quite, equal to the value of every acre of land it granted for this purpose.

Such has been the return to the Government for the enterprise and sagacity shown by the men who formerly occupied seats here to this magnificent State. Can New York show a better return for grants made her? Again, we are informed that the State of New York makes and pays for her own internal improvements. If the gentleman will but consult the record he will find that this Government, from the year 1824 to 1879, (I have not the data to date,) paid out of the Treasury, when it could ill afford it, in money, not in land, to be subsequently returned with interest, but in cold cash for improvements of rivers and harbors, the sum of \$9,070,503.06. This sum, understand, was for the improvement of rivers and harbors, not for light-houses, public buildings, arsenals, academies, and other public improvements made in that State by the Government, neither does it include the contemplated canal between the Harlem and Hudson Rivers, which has been surveyed and authorized, with an estimated cost of \$2,100,000.

Again he advises us that, owing to the greatness in wealth and population, growth and prosperity of the States of Illinois and Iowa, we should build our own internal improvements, and not come as we do begging like mendicants for an appropriation. Iowa is eminently able and will speak for herself, but for Illinois, I would remind the gentleman that we are not here in any such humiliating attitude.

Illinois stands here proud of herself and her achievements; wealthy; in debt not for a dollar; populous, the fourth, and quite near the third, State in the Union; growth more rapid and more marvelous than most States; prosperity unequalled, growing from the farm-created wealth of \$325,000,000 in value per annum, as estimated by

the Agricultural Department, to her agriculturists, and her chief city the first in commercial enterprise, first as a focal center of transportation, first as a shipping port of vessels entered and cleared, exceeding those of New York by more than 7,000 per annum; third in the product of its manufactures, aggregating \$241,000,000 in 1880, and last of cities of larger population in its debt per capita; that State, my friend, stands here not as a mendicant, not as a beggar, not posturing itself in any such attitude, but she stands erect, and demands, not with the bludgeon or the bowie-knife, but in a respectful manner, that which she believes to be right and just between man and man, between State and State, between the Government and herself.

She believes that as she furnishes her full quota to fight the battles of the nation, that as she furnishes her full quota for the payment of the customs duties in proportion as her population bears to the whole, that as she pays one-fifth (\$25,000,000) of all the internal revenue in this country, and performs cheerfully each and every duty expected of her according to her population, wealth, and prosperity, that the Government as a nation shall do its duty by her and her people.

The benefits to be derived by the public in the construction of the Hennepin Canal have been so ably presented by General HENDERSON and other friends of the project in both Houses that I will not detain the House at this time to repeat or enter into any detailed statement of them, but confine myself to the proposition before this House, which is: shall Congress authorize a survey to be made of the present Illinois and Michigan Canal and for the proposed Hennepin Canal? One branch of the Government says yes, and incorporates upon this bill an amendment for that purpose and sends it to this House for concurrence. Here it is antagonized by some members who assume that it is not within the function of the national Government to perform this service.

If it were a river or a creek it would be lawful, but to make a survey for a canal in a State is neither wise or lawful for the Government. Whether it is wise or not for the Government to enter upon the construction of that portion of this project known as the Hennepin Canal is, in a measure, to be determined by the very survey asked for. It requires the engineers to report the estimated cost of construction, the cost of maintenance when completed, and the advantages to be derived by its construction. The Senate of the United States has asked for this; one of the standing committees of this House, with but two dissenting voices, has asked by their report for the construction of this canal and recommended a large appropriation therefor.

The Legislature of the State of Illinois has asked that this canal be constructed. The Legislature of the State of Iowa in 1864, 1870, 1874, and 1882 has asked that this canal be constructed.

The Chicago Board of Trade, the Davenport Board of Trade, the Duluth Chamber of Commerce, the Buffalo Board of Trade, the New York Board of Trade and Transportation, and the New York Produce Exchange are among the commercial bodies which have indorsed this project and have asked the construction of this canal by the General Government.

The people of the Northwest, irrespective of party, are almost unanimously in favor of this canal. Do not these Legislatures, these commercial boards, these conventions of the people, and the people themselves know whether it is wise for the Government to move in this project? They are much better fitted, in my opinion, by residence and business pursuits to judge of the wisdom of this course than those who have antagonized it upon this floor. These bodies have given the subject much thought and study, and they represent no inconsiderable portion of the people who must provide the means required to construct this canal.

Now, let us see whether this survey comes within the functions of the national Government.

What Government has repeatedly done it may again undertake. I find in running over some of the acts passed in former Congresses that it has been customary for the Government to make surveys of this character and appropriate money therefor for more than half a century; not only authorizing surveys to be made for the construction of canals but to aid in their construction, accepting them from States, to be further improved and enlarged, purchasing thousands of shares in canal stock, and even purchasing canals outright. The precedents are all one way. I invite attention now to only a few that I noticed in rapidly running over the books.

Act of March 3, 1826: President authorized to cause to be made an examination south of Saint Mary's River, with a view to ascertain the most eligible route for a canal to connect the Atlantic with Gulf of Mexico, and appropriation made therefor.

Act of May 31, 1830: For completing survey to connect the Atlantic with Gulf of Mexico, and to secure detailed report of the practicability or impracticability for a ship or other canal, and making an appropriation therefor.

Act of August 30, 1852: For completing survey for the same ship-canal, and making appropriation therefor.

And again, March 3, 1875: Appropriation for still another survey for the same. This one project received four appropriations for survey.

Act of July 4, 1832: Authorizes President to cause an accurate and minute survey to be made between the waters of Saint Andrew's Bay

of Chattahoochee and between Pensacola Bay and Bon Secour to ascertain the practicability and cost of canals to connect said bays and rivers, with estimates of cost, &c., and appropriation made therefor.

Act of March 3, 1837: Authorized survey for a canal to connect the Chesapeake Bay with Charleston, South Carolina, and appropriation made therefor.

Act of March 3, 1839: For further survey and estimates of cost to connect by canal Neenah and Wisconsin Rivers, and appropriation made therefor.

Act of March 22, 1867: Appropriation made for a survey for a ship-canal to connect Lake Ontario and Lake Erie, and appropriation made therefor.

Act of July 7, 1870: Provides for the purchase of canal and franchises from the Green Bay and Mississippi Canal Company.

Act July 11, 1870, to deepen ship-canal, Patapsco River, and Chesapeake, and appropriation made therefor.

Act March 3, 1871: Survey for ship-canal from the head of Sturgeon Bay, Wisconsin, to the shore of Lake Michigan, and appropriation made therefor.

Act March 3, 1873: Appropriation made for survey for an extension of the Chesapeake and Ohio Canal. Also appropriation of \$20,000 for survey to connect inland waters from Donaldson, Louisiana, to Rio Grande River, Texas, by cuts and canals.

Act of March 3, 1875: For examination and survey of route for a canal from Lake Michigan to the Wabash River, and appropriation made therefor.

Act of June 14, 1880: Accepts from the State of Michigan Saint Mary's Canal, public works, franchise, &c., and appropriates \$250,000 for improving and operating same.

Act of May 15, 1826: Purchases in name of United States 1,000 shares stock of Louisville and Portland Canal Company, at \$100 per share; and the Secretary of the Treasury shall vote the stock for president of company, &c.

Act of March 2, 1829: Purchases 1,350 shares of stock in Louisville and Portland Canal Company at \$100 per share; Secretary of Treasury to vote the stock.

Act of March 3, 1873: Appropriates \$100,000 to complete the Louisville and Portland Canal, and Secretary of Treasury authorized to assume control in conformity with terms of joint resolution of the Legislature, State of Kentucky, approved March 28, 1872, and to reduce tolls to a minimum.

Act of March 3, 1881: Louisville and Portland Canal became free, and Secretary of Treasury authorized to draw his warrant on the Treasury to meet expenses of maintaining and operating said canal.

The act of June 23, 1874, authorizes survey for a cut or canal from Randall's Island, Harlem River, to the Hudson River. Amount of commerce to be benefited given by the engineer's report, page 631, as blank. The commissioners appointed by the Supreme Court to acquire right of way for the canal to connect Harlem and Hudson Rivers have not yet completed their work. Original estimate for fifteen-foot channel, \$2,100,000.

If time would permit other precedents could be cited to show that it has been the policy and the custom of the Government from our earliest history, "from the fathers," so often referred to by the opponents of this measure, to the present time to authorize surveys to be made to ascertain the practicability of constructing canals, to aid in their construction, to purchase stock in canal companies, and to buy them outright, enlarge them, and make them free when the public would be benefited thereby.

Shall it be questioned to-day after such an array of interpretations of the Constitution by former Congresses that there is a constitutional right or power to make this survey?

Webster said in a letter to the convention that met in Chicago July 5, 1847, in referring to the necessity for improving our Western rivers and harbors and the importance of the Illinois and Michigan Canal as a connecting link between the two great systems, that—

I hope the convention may do much good by enforcing the necessity of exercising these just powers of the Government. * * * This power, in my opinion, is not partial, limited, obscure, * * * but is * * * general, and limited only by the importance of each particular subject and the discretion of Congress.

Thomas H. Benton approved of the action contemplated by the convention, and being unable to attend, wrote as follows:

The lake and river navigation of the great West, to promote which the convention is called, very early had a share of my attention, and I never had a doubt of the constitutionality or expediency of bringing that navigation within the circle of internal improvement by the Federal Government when the object to be improved should be one of general and national importance.

The junction of the two great systems of waters which occupy so much of our country—the northern lakes on one hand and the Mississippi River and its tributaries on the other—appear to me to be an object of that character, and Chicago the proper point for effecting that union, and near thirty years ago I wrote and published articles in a Saint Louis newspaper in favor of that object, indicated and accomplished by nature herself, and wanting but a helping hand from man to complete it. * * * I mention this to show that my opinions on this subject are of long standing, and that the nationality of the Chicago Canal, and, of course, the harbor at its mouth, are by no means new conceptions with me. * * * Thus, on the important items of the Chicago Canal, the rapids of the Upper Mississippi, and the Missouri River I was the first to propose to include them within the circle of internal improvement by the Federal Government. I had always been a friend to that system, but not to its abuse; and here lies the difference and the danger and the stumbling block to success. Objects of general and national importance can alone claim the aid of the Federal Government; and in favor of such objects I believe all the departments of the Government to be united. Confined to them, and

the Constitution can reach them and the Treasury sustain them; extended to local or sectional objects, and neither the Constitution nor the Treasury can uphold them. National objects of improvement are few in number, definite in character, and manageable by the Treasury.

These statesmen found no difficulty in finding the requisite power and authority in the Constitution to engage the Government in works of this character.

The importance of the project, to be determined by Congress, and the discretion of Congress seemed to be the requisites to bring the work within the care of the Federal Government.

If this canal when constructed would only benefit a small community and was purely local in its character and benefits there would be some force in the argument that local capital should construct it. But this is not true; the State of Iowa will receive much greater benefits from it than the State of Illinois.

Why, then, should Illinois construct this canal? You may reply, let Illinois and Iowa build it then. Where will you stop? Where do you draw the line between local and national benefits, local and national improvements? This canal will greatly benefit all of the people west and northwest of Illinois, the Upper Mississippi from Saint Paul down. It will greatly benefit New York State and New York City, and the opposition coming from that quarter I cannot understand. The people east and west of Illinois will receive greater benefits than Illinois; and every man who is benefited by cheap transportation of grain and provisions to the East, whether he be the Iowa, Illinois, or the Minnesota farmer who raises the grain or the New England mechanic who consumes it, will be benefited by its construction.

If Congress has no constitutional power to construct internal improvements, by what power or right then did they grant aid, credit and lands to our railroad system? If they have the power, where in the Constitution do you find that such improvements should pass through more than one State? It seems that such improvements should be made where they can be constructed at the least expense, and where we can facilitate and cheapen the largest amount of commerce. The outlet for the commerce of the Northwest is New York City; it is not down the Mississippi; it will go to New York unless New York herself prevents it by crippling the water-route. The construction of the Hennepin Canal places Saint Paul and New York in direct water connection. The water-route is the cheaper, and grain moves to the seaboard from the interior by that route. There was received in Chicago last season of corn and wheat as follows:

Corn:	Bushels.
By lake.....	5,243,865
By canal.....	92,028,979
By rail.....	
Total.....	97,272,844
Wheat:	
By lake.....	481,233
By canal.....	2,737
By rail.....	23,057,637
Total.....	23,541,607

Total amount of corn and wheat received, 120,814,451 bushels; of which more than 115,000,000 bushels were received by rail.

Our little Illinois and Michigan Canal, the only water transportation west or south connecting with Chicago, delivered five and a quarter million bushels, and the farmers along that line at its terminus and those so located as to be enabled to ship to Chicago by that route realized a considerable advance for their grain over the amount realized by the farmers living an equal distance from Chicago but who had only railway facilities.

The quantity of corn and wheat shipped from Chicago was as follows:

Corn:	Bushels.
By lake.....	72,400,769
By canal.....	21,172,165
By rail.....	
Total.....	93,572,934
Wheat:	
By lake.....	16,685,046
By canal.....	478,473
By rail.....	5,632,769
Total.....	22,796,288

Total corn and wheat, 116,369,222 bushels; of which 89,504,278 bushels were shipped by water, showing that these two great staples move to the seaboard by water in spite of the ruinous competition of railroads. The two great systems, the lakes and the river, should be united. The project has been advocated for years, and never has it been regarded as a local or sectional one.

We hear much of the decline of our foreign commerce and all are eager to encourage it, yet here is a commerce on our lakes worth more than \$100,000,000 that should command attention. More than one-fifth of the number of vessels and more than one-fourth of the total tonnage of the shipping of the United States to-day floats upon the waters of these two systems.

The State of Illinois has already done much to unite the two, and has expended a million dollars upon the Illinois River on its improvement which should have been expended by the national Government. With such improvement as the State has made, with some assistance from the national Government, the river is in such a condition already

that, from the report of the Merchant's Exchange of Saint Louis, it appears that there were delivered from this river at Saint Louis 96,000 tons more freight than was delivered at the same place for the same period from the great Missouri, and that one hundred more vessels arrived there from the Illinois than from the Missouri, and yet this House votes \$1,000,000 for the Missouri and but \$175,000 for the Illinois.

Public improvements of this character should be made where there is commerce. You may put \$20,000,000 into the Mississippi below Cairo, and for commercial purposes it will not be so beneficial as the expenditure of the four millions that are required to complete this canal; the great grain and provision States will send their products east. Why this House, after voting some \$6,000,000, the most of which we all know is to be expended in reclaiming lands in the South, and then raise a constitutional question on the construction of the Hennepin Canal, strictly in the line of commerce, passes my comprehension.

Commerce will not be facilitated or navigation improved by the construction of a levee. A levee is not required until the river overflows its bank, and to be of service is located at least a quarter to a half mile from the stream, and a large amount of the sum appropriated by this bill is to be expended in building levees. The Constitution is found broad enough to embrace this character of improvement, but the power under the Constitution to make a survey for a canal where commerce requires it is questioned.

This amendment should be concurred in; let the survey be made, let the Congress be fully informed, and then let its action on the question of construction be that of statesmen thoroughly acquainted with the magnitude of their country and of its commercial life, and I have no fears for the Hennepin Canal.

Assay Office at Deadwood, Dakota.

SPEECH

OF

HON. R. F. PETTIGREW,

OF DAKOTA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 27, 1882,

On the bill (S. No. 1604) to establish an assay office at Deadwood, in the Territory of Dakota.

Mr. PETTIGREW said:

Mr. SPEAKER: The bill I have the honor to bring to the attention of this House, (Senate bill 1604,) and which I now ask the House to take up and pass, is an exact copy of a bill introduced in this body by me on the 20th day of December last, to wit, H. R. 1887, and which on my motion was referred to the Committee on Coinage, Weights, and Measures. That committee, after due consideration, reported my bill back to the House with their unanimous recommendation that it be passed, instructing the chairman to make a motion to suspend the rules for that purpose.

Sir, the Senate bill now under consideration here provides for the location and establishment of a United States assay office in the city of Deadwood, Lawrence County, Dakota.

This city is situated in the famous region known as the "Black Hills," which region includes all the lands within Dakota immediately west of the Sioux reservation, and is the commercial capital of its people. The Black Hills proper is a section which must always be distinctive in itself because of a wonderfully formed line of demarkation, which I shall describe more fully before concluding. This line is elliptical in form, extending over one hundred miles in a northwest and southeast direction, and from forty to sixty miles broad, and is passed with difficulty except at particular points. Previous to 1876 this tract was a part of the wilderness embraced in the great Sioux reservation, then under the dominion of Spotted Tail, Red Cloud, Sitting Bull, and their dusky followers, and under the terms of their treaty with the United States was forever closed against settlement by the whites.

After the outbreak which ended in the massacre of Custer and his brave men on that memorable Sunday morning, June 25, 1876, on the Little Big Horn, the Indians belonging to the Sioux reservation not concerned with Sitting Bull were allowed to remain, but under a new compact made the year after the sad event, by which compact the Black Hills region, embracing 12,000 square miles in area, or nearly 8,000,000 acres, was surrendered by the Indians to the United States.

Sir, the circumstances attending the development of this location by the whites embrace some of the most thrilling as well as romantic incidents in the history of the West. When the 115 bodies of soldiers lay clustered around their fair-haired leader, festering in the burning sun where they had fallen under the murderous fire of thousands of treacherous Indians lying in ambush, martyrs to a false policy, which policy we who live near the Indians so well know is suicidal,

the Black Hills were already resounding to the echo of the miner's implements.

The white settlers of the country surrounding the Sioux early became interested in rumors of gold fields upon their reservation. The Indians on their visits to the agencies and trading posts would often allude to gold deposits of great richness in some mysterious part of their lands, and in support of their stories exhibited nuggets and specimens of gold-bearing quartz. But, sir, they studiously rejected all propositions to give up their secret or to guide parties to the location of the precious deposits.

Sir, these rumors multiplied, became more specific, and were corroborated by the production of many rich nuggets in the hands of traders who had obtained them from their original owners, and through these sources some idea of the direction in which these deposits were located was finally formed. Eventually the interest of the pioneers in Iowa, Nebraska, and "old" Dakota took shape in the organization of prospecting parties, the first starting from Sioux City, Iowa, in the early spring of 1873, about which time the lamented Custer with the Seventh Cavalry was sent to the region of the supposed gold fields by the Government, accompanied by Henry Newton and Walter E. Jenney, geologists, together with other eminent specialists, to investigate and report as to the correctness of the rumors and their value if the mineral deposits were found.

The official reports from this expedition more than confirmed the most extravagant rumors, and the interest and excitement soon rivaled the early days of California. Thousands rushed to the location early in 1874 from all parts of the world, but the national authorities undertook to protect the Indians in their exclusive occupation of these lands, and in their efforts to stem the tide of white adventurers the Army was engaged in arresting them by hundreds as trespassers, and, sir, it is matter of official history that a number of trains were taken into Fort Randall, the owners placed in close arrest, while their wagons and other property was piled up and burned before their eyes.

Encouraged by this example on the part of the Government the savages waged their relentless warfare upon the alleged trespassers with increased vigor, murdering them indiscriminately wherever found.

In the face of these obstacles, sir, the column of whites poured into the hills, eluding both the Army and the Indians, and before the treaty of 1877, by which the Black Hills were surrendered by the latter, there were fully 20,000 white people occupying the lands, with established cities, villages, and settlements of well-organized, orderly communities.

Sir, the Black Hills is now a flourishing portion of settled Dakota, fully organized and divided into three counties, to wit, Lawrence, Pennington, and Custer, the first named being the northernmost, Custer the extreme southernmost, with Pennington in the center. Together they contain 25,000 inhabitants, 16,000 residing in Lawrence, 5,000 in Pennington, and the remainder in Custer.

Deadwood is the county-seat of Lawrence and contains 4,000 inhabitants. This place, sir, is the outgrowth of the mining developments, and here the great bulk of gold produced in the hills finds its way, from whence it drifts into the commerce of the world.

Beside Deadwood, Lawrence County is the seat of Leeds City, with 3,000 people, and Central City, with 2,000.

The seat of these three cities, grouped within a radius of four miles, is the renowned Deadwood Gulch, which has already produced many millions of placer gold, and within a few months past quartz mining has assumed huge proportions, with enormous annual yield. Within this radius 1,200 stamps never cease their clatter day or night, producing at the rate of \$5,000,000 pure gold per annum.

The quartz worked in these mills is obtained from the Deadwood vein, which is three hundred and twenty-five feet in width and three miles long. This vein has been opened to a depth of six hundred feet at different points and found to be rich in paying ore from its very surface to the lowest depths penetrated, yielding from \$7 to \$9 per ton throughout. It is all free-milling ore and is mined and milled at a maximum cost of \$2.50 per ton.

Upon this vein several mills are in operation, yet the claims now being worked constitute but a small part of its area. In a single one of these mines in operation there is \$25,000,000 in sight, being one of the most valuable properties in the world, already producing an annual revenue rivaling that of such old corporations of the East as the great Central Railroad of New York. In fact, sir, this enterprise owns and operates a steam railway of its own more than twenty-five miles in length, tapping the forests, and constantly operated for the single purpose of supplying timber for use in the mine.

This railway, from the rails to the great steam-horse which draws the cars, was imported across the uninhabited plains more than two hundred miles by means of horses, and was put in operation at a cost of more than \$300,000. This item, sir, conveys a fair impression of the growing importance of the mining interests here.

Twelve miles distant, to the west of Deadwood, is Bald Mountain, which is another extensive vein of gold-bearing quartz, containing more gold to the ton; but the ore is refractory and requires roasting to reduce it, although the profit per ton is much greater. Mining is in successful progress here, with rich yield and most promising future.

Strawberry Gulch, ten miles from Deadwood, in another direction,

is surrounded with mountains of gold-bearing ore of the free-milling class, not quite so rich as the Deadwood ores, in greater quantities, however, and easy of access. Mining operations are in progress here also, with satisfactory result, rapidly increasing in volume and promising immense proportions.

Besides many other beds of valuable gold-bearing quartz too numerous to specify, situated in this county of Lawrence, twelve miles to the southeast of Deadwood, is the village of Galena, at the base of another mountainous formation containing rich deposits of silver and inexhaustible quantities of lead. Two smelters are in constant operation producing pure silver at the rate of half a million dollars a year, with large profit to the owners. This silver-mining enterprise is in its very infancy, but the supply is practically inexhaustible and also has a great future.

Within this county are vast numbers of these veins containing both gold and silver, many of which have been prospected with satisfactory results and await the combined action of brawn and capital, ready to surrender their rich contents.

In Pennington County several locations are being mined successfully, some of the quartz deposits producing as high as \$6,000 in gold per ton. The placer-mining interests in this county assume special importance.

At Rockerville, fourteen miles southeast of Rapid City, the capital of the county, there is a flume eighteen miles long bringing water from the headwaters of Spring Creek, which is used for washing gold out of the earth. The location of this place is a fertile plain of more than a thousand acres near the hill-top. Every inch of this plain is gold-bearing, already staked out in regular claims. Mining experts estimate its value at sixty cents per cubic yard, and fix its aggregate value at more than \$2,000,000,000. One hundred thousand dollars was taken in the first year off of a single claim.

Since the introduction of the flume the product of gold at Rockerville has increased very rapidly and has amply compensated the projectors of the flume who expended a quarter of a million dollars in its construction.

There are several of these rich gold-producing plateaus in Pennington County already in occupation, but not so far advanced as the Rockerville plateau, and there are doubtless others not yet discovered, as Pennington County extends fully fifty miles across the quartz-bearing region.

That part of the Black Hills included in Custer County is also rich in quartz and gold-bearing earth, and mining of both classes is in successful progress with great promises in the future. Placer mining at Harney has proved very profitable, and is fast assuming vast proportions, while the quartz mines near Custer are being profitably worked, and a large mill on the Grand Junction mine is producing a constant and steady yield of gold at large profit.

Mr. Speaker, the people inhabiting this section are a mining community purely. They have laid the foundation of their own prosperity upon an enduring base, by delving into the earth and forcing her to exhibit the boundless treasure therein. The presence of these valuable deposits has already wrought wonders in the way of progress. Cities and towns have sprung into being throughout its domain possessing churches, schools, banks, hotels, and branches of all the industrial and commercial enterprises known to our frontier civilization. Valuable and extensive stock and grain farms have developed throughout the surrounding country, the products of which find ready and most remunerative markets at their very doors in supplying the miners in exchange for their native gold.

One great peculiarity of this mining land, Mr. Speaker, is its fertility. The soil produces rich crops to the very apex of the highest mountains, and it is not infrequent, sir, that mining operations lead into gardens of luxuriant vegetables.

Returning to the mineral wealth of this country, I will state that salt and petroleum exist in large quantities and are produced with little effort, in sufficient quantities to supply the home market. With transportation facilities these articles will become important items of export. Mica exists in inexhaustible quantities of superior quality, and is already an important item of export. Gypsum also exists in boundless masses. Copper, lead, and asbestos can be had for the taking. The hillsides are covered with forests of valuable timber, and great beds of pure bituminous coal, easy of access, surround the hills.

Here, sir, we find a busy community, possessed of vast wealth, paying the highest labor wages in the world; 200 miles away from railroad communication, which has built itself out of the soil, without the slightest aid from the outside, supporting themselves, paying their full tribute into the national Treasury, adding more than \$6,000,000 to the annual gold product of the country, without a dollar's assistance from the nation.

Mr. Speaker, these people are more embarrassed by the lack of facilities for obtaining accurate, reliable, and authoritative tests of their ore than any other mining community in the country. The placer miners particularly, those plodding toilers who constitute the great bulk in point of numbers of the community, are especially inconvenienced for want of market facilities for their product; their daily gains in most instances constituting their whole stock in trade, which they are forced to sell, in part at least, to meet their daily wants. It has been the custom of the Government, Mr. Speaker, to establish assay offices at every point where gold and silver mining

has been developed in large fields and where the deposits appear to exist in quantities promising permanent operations. In proof of this assertion I beg to call your attention to the one at Charlotte, North Carolina; that at Boise City, Idaho; also the one at Helena, Montana; one at Denver, Colorado; mint and assay office at Carson City, Nevada, besides those at San Francisco and other older cities of the Union.

Sir, the great advantage of the United States assay office in a community like that of the Black Hills is that the miner is permitted to deposit his gold and receive a certificate for the value thereof; which certificate passes current in trade in any part of the United States, or, at his option, can have the metal run in bars and the value thereof stamped on each bar, when it becomes marketable at its actual value.

Without such an office at hand, Mr. Speaker, the miner is at the mercy of the merchant, trader, or sharper to whom he is compelled by his necessities to go with his gold, who, of course, fixes its value and weight by his own arbitrary standard.

No other mining community is so far from established marts for the product of the mines, or so completely at the mercy of the class I have just referred to. Yet, sir, this is second to but one other gold producing region in the Union in the value of its product.

Beside the advantage as a medium for getting the metals into market, the United States assay office affords a means for the prospector and investor to obtain accurate estimates of the value of the ores found throughout the mining lands, and protects them from the cupidity of private chemists who, unfortunately, are sometimes influenced by other than equitable reasons in preparing reports.

Free-milling ores of low grade exist in inexhaustible quantities throughout this land, and in these ores especially strict accuracy is vital, as the margin of profit is small at best, the revenue depending largely on the quantities handled. In proportion to the facilities for obtaining official reports upon specimens from new discoveries may we hope for the rapid development of additional mines.

Mr. Speaker, I believe you will justify me in occupying the valuable time of this House while I attempt a description of this remarkable revelation of the precious contents of the earth, as they are shown us in this spot, a trap-door, as it were, opened by the action of some mighty convulsion, through which the specimens in question have been thrust, and where they loom 4,400 feet above the surrounding country, torn and shivered in the form in which they have since lain, except such parts as have disintegrated under the action of the seasons during all the ages of their exposure.

Sir, the general character of the surrounding country is one vast plain ascending westwardly until it reaches, at the foot of these hills, an altitude of 3,000 feet above the sea. These plains are unbroken by mountains and unvexed by rocks until the uplift comprising this mineral exposure is reached, at which point we encounter an abrupt wall rising out of the prairie from four to five hundred feet. This wall is continuous, and walls in the Black Hills completely, in the elliptical form already mentioned, and incloses the whole of the mineral deposits known to exist here.

This line of limestone cliffs, when their summit is reached, recedes, if possible, more abruptly than on the outer wall. The geological revolution is entirely inside. The rocks are almost exclusively Archean slates, and schists, and granite.

As you approach the center of the ellipse series of broken hills are encountered, rising one above the other, until at the summit they have an altitude 4,400 feet above the surrounding plains, or 7,400 feet above the sea. The highest of these peaks are composed almost exclusively of granite, the schists and slate constituting the next lower portions between the granite and limestone.

The barrier to this charmed region can be entered conveniently only where the mountain streams have forced passages on their way to the sea. Passing this rampart, you approach the hills, their somber covering of dense Norway pine giving the impression of black clouds in the distance; hence the term "Black Hills." Once within, sir, vein after vein of gold-bearing quartz is found on every hill, all of good paying quality. In every valley and on every stream placer gold is found, the earth being rich with it in inexhaustible quantities. Why, Mr. Speaker, it is in testimony in the courts, recorded there in disputed issues among the miners, that there has never a pan of earth been tested within this region that did not show gold.

Sir, when this region is tapped by the railroads and brought into communication with the outside, so that great mills can be constructed at reasonable cost, it will soon be impossible to get beyond the sound of their busy hum, while the placer yield will keep apace with its more stately rival.

It will be but a modest assumption, sir, based upon the uniform increase of the product and the supply awaiting the people to come, to say that within five years the annual yield of gold alone will reach \$20,000,000.

Sir, the uplift produced by the mysterious powers of nature at this point, leaving it in its present disorder, thrusting these lower strata through the original level, is unquestionably, from a geological stand-point, of recent date, and could not have begun until after the Cretaceous period.

Its recent character is proven by the formation of its drainage system. All the streams rise in the center of the uplift and flow thence outward in every direction. Also, from the fact that all the strata

or rock dip outward from the center. Further, the strata of the rocks surrounding the hills are parallel and conformable.

And, sir, the different formations, such as the Potsdam, Jura, Cretaceous, &c., have rough and broken edges where exposed to the surface, whereas if they had been formed after the hills had risen from the ocean their edges would have been worn off or welded into the geological strata which compose the hills, and there would have been no distinct line of demarkation.

Here, sir, we find a geological formation containing vast quantities of gold, which formation remained submerged until the very latest geological era, thereby subjecting the gold-bearing rock for the longest possible period to the influences of those conditions most favorable to the accumulation of gold in veins.

For these reasons, sir, as well as every other rule in geology that we may adapt to guide our judgment, we are justified in supposing the deposits of the precious metals in the Black Hills exist to great depths, as is fully proven by experiments so far as they have been made.

Therefore, Mr. Speaker, the product of these metals must be lasting and it must increase in volume, limited only by the effort made by man to disengage them from their native beds.

Mr. Speaker, I have given but a glimpse of the unbounded possibilities of the section in behalf of which I make this appeal to the House. It is beyond my feeble power, sir, to picture the work of nature on that spot or to enumerate the instances of important and valuable improvements already established by the busy brains and hands of the irrepressible pioneers already engaged in gathering the wealth here revealed.

In behalf of these latter I stand here asking this House to inaugurate an enterprise of small moment indeed to this great Government, but one, sir, which will guarantee the miner the full value of his earnings, and by standing between him and the vultures ever ready to pluck him he is encouraged to additional effort, thus increasing the annual product of precious metals, besides encouraging thousands of others to join in the work.

Mr. Speaker, one of the proudest events of this busy session to me will occur when I am assured that I can take this act and present it to these people as a law of the land, as an evidence of the thoughtful consideration of this Congress for her deserving wards living so far beyond the boundary of civilization.

Internal-Revenue Taxation.

SPEECH

OF

HON. THERON M. RICE,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 23, 1882.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. No. 5538) to reduce internal-revenue taxation—

Mr. RICE said:

Mr. CHAIRMAN: Before proceeding with the discussion of the questions involved in the bill before the committee, I trust I may be pardoned for making brief allusion to another subject, although of less importance to the House and country, still one that I cannot overlook or pass in silence. During my temporary absence from the House on yesterday my colleague [Mr. BLAND] deemed it wise to make a premeditated attack upon the Greenbackers in the House, especially those from Missouri, and upon myself particularly. On another occasion during this session I was compelled to criticize the language of the gentleman and attribute his course to his ignorance of facts and over-partisan zeal. The performance of my colleague on yesterday I can only attribute to a willful and malicious effort to palm off upon the House and the country a gross perversion of facts as the act of a charlatan who, ignoring well-defined rules recognized by gentlemen and the courtesy due to members of the highest legislative body in the nation, descended to the tricks of the ward bumner to make political capital, and occupied the time of the House in an effort to manufacture buncombe to save his politically waning fortunes at home.

For over a month the gentleman has been writhing under the castigation I was compelled to administer to him on May 19 last, and yesterday he attempted to pour out his vials of wrath, and, unmindful of his duty to his district, his State, and the nation, forgetful of his high responsibility as a representative of an earnest, patriotic, and law-abiding constituency, he ignores all the higher duties of the trust devolving upon him, and at the expense of truth, justice, gentlemanly courtesy, and fair dealing, occupies the time of the House, hindering needful legislation, to wreak personal spite upon political opponents who have never entertained or expressed other than kindest personal feeling for him. Our offense may have been commiseration of his condition politically.

In the face of the personal disclaimer of each of his Greenback colleagues, members of this House from Missouri, and the written statement of Major Ben: Perley Poore, Compiler of the Congressional Directory, he charges "that my Greenback friends, Messrs. HASELTINE, RICE, and BURROWS, in some manner, in giving their biographical sketches to the printer of the Congressional Directory, somehow or other made the mistake, each and every one of them, of writing themselves down as Greenback Republicans." This in the face of the public apology of Major Poore, that his statistical statement was taken from an almanac, and not from the personal or manuscript statement of the gentlemen named. Now, sir, if political capital can be made from so gross a defamation, so unjustifiable a violation of gentlemanly courtesy and perversion of fact, the gentleman is welcome to all he can make out of it.

But, Mr. Chairman, the animus of the gentleman is shown further on where he quotes from an article in the National Republican of June 2, 1882, as follows:

Judge RICE made one or two ringing speeches, creating quite an excitement in his denunciation of the Bourbons. Yesterday a magnificent floral stand, surmounted with a trumpet, was placed on Judge RICE's desk as a compliment to the Missouri Greenbackers and to RICE as their voice. Judge RICE has been nominated by the Greenbackers of Missouri for supreme judge, and will doubtless be supported by the Republicans and every element of opposition to Bourbonism in the State, with good prospects of defeating Bourbonism this fall.

This, after all, seems to be the heart, the essence of my offending. It was like shaking a red rag in the face of a bull, and the gentleman on yesterday embraced his first opportunity to paw the earth and rend the air. He had filled a seat in Congress for nine years and had never done anything to call forth any popular or private demonstration of approval. So that it was like applying salt and pepper to a lacerated back to have the effort and action of his colleague, his Greenback political opponent, complimented or approved. The floral offering and the mention in the National Republican came to me as a surprise. Had I been advised of their preparation and of the sensitive disposition of my colleague I might have saved him the chagrin and mortification he seems to have suffered. As it is, I am not responsible for either, and the most I can say by way of reparation is, I commiserate him.

CONTESTED-ELECTION CASES.

The gentleman arraigns the Greenbackers for their votes upon the contested-election cases, and those from Missouri for having heretofore co-operated with the Republican party.

Mr. Chairman, I wish to state here and now for myself that for my action and votes in the past, or during my connection with your honorable body, I have no apology to make, either to the gentleman, this House, or the country. In the contested-election cases I studiously did what my conscience approved. Sir, those contested-election cases presented to this House a question of the highest privilege under the Constitution; they involved questions of law and fact, upon which we as sworn members were called upon to inquire and pass upon judicially. Under the Constitution there is no escape from this responsibility. I maintain that a member-elect's right to a seat on this floor is non-political, it is non-partisan. Our action upon it is purely judicial—to find the fact and decide the law.

And, sir, I assert that it is beneath the dignity of the American Congress in determining these questions to be in any manner influenced by partisan considerations or swayed by political zeal. The question is, was the contestant elected? If so, he is entitled to his seat, and no power, no voice can be justly interposed to keep him out; no matter what his politics, no matter what his creed. And, sir, I defy the gentleman to offer any reasonable excuse or justification for either himself or his party in defense of their course in obstructing legislation in voting for the retention of Chalmers and refusing to vote for the retention of Finley, and for their eight days of filibustering to prevent the unseating of Dibble and Wheeler. Sir, the "wayfaring man" who might read at all could not err in his judgment as to the right and justice of these cases, and no man, I care not what his politics, be he honest, understanding the law and the facts governing these cases, will censure Greenbackers either for their vote or action.

What are the facts of the case? In the case of Lynch vs. Chalmers there is no question but what Mr. Lynch was elected by a clear majority of 663 votes. No Democrat on this floor in his argument of Mr. Chalmers's right to retain his seat ever claimed that at the election of 1880 he received a majority of the votes cast, but for their defense were driven to take shelter behind technicalities of the most frivolous character and a decision of the supreme court of Mississippi upon a question over which it clearly had no jurisdiction.

The case of Mackey vs. Dibble: It is understood that Mr. Dibble was the successor of Mr. O'Connor, who deceased pending the contest. An examination of this case will show Mr. Mackey's election by a clear majority of 879 votes; that the Democratic board of election managers appointed under the laws of South Carolina so certified to Mr. Mackey's election, but the governor of the State, against this certification and without color of legal authority, issued the certificate of election to Mr. O'Connor. More need not be said; the right of Mr. Mackey to his seat as a member of this House was clear and undoubted.

The Bisbee vs. Finley (Florida) case: I concede there is some doubt in my own mind as to who was elected, Mr. Bisbee or Mr. Finley.

XIII—474

The action of the Committee on Elections was such they in their majority report, as did the House, threw out some 350 votes which in all justice ought to have been counted for Mr. Finley. And there appears from the testimony other irregularities which in my judgment rendered the result very doubtful. I had no satisfactory assurance, and it does not appear in the evidence, that Mr. Bisbee was elected. Therefore, I, with my Greenback colleagues, voted to retain the contestant in his seat. In other words, we decided that the contestant had failed to make out his case. My colleague and the Democratic party, as had been their wont, refused to vote in this case. If they had stood to their colors and under their oaths had performed their duty in this case as did the Greenbackers, Mr. Finley would have been in his seat to-day, but refusing to vote they sacrificed their man. Can my colleague justify himself before his constituency?

In the case of Lowe vs. Wheeler the evidence was positive and undisputed that Mr. Wheeler was counted in by tissue ballots and fraud of the basest character. The seating of Mr. Lowe was just and proper and a deserved rebuke upon fraud and ballot-stuffing.

DISFRANCHISEMENT IN MISSOURI.

Mr. Chairman, I am also arraigned by my colleague for having in 1864 voted for an amendment to the constitution of Missouri disfranchising those who were in sympathy with secession or were guilty of overt acts of rebellion. For that vote I have no apology to make. I cast it, joining with the patriotic heart of Missouri, in company with many who are to-day Democrats, believing it was not only necessary but just as a war measure for the protection of loyalty and good government.

When I cast that vote I was with the Army at the battle's front. All that was dear to me was left behind, except the flag and loyalty to my country and her laws. I ever acted, voted, and stood by and with the men loyal and true to their country.

When the war was ended and peace restored in the land the Republican party of Missouri, whether wisely or unwisely, restored the franchise to all her people in 1870. It was this act of clemency on the part of loyal men in Missouri that made it possible for the gentleman to become a member of Congress from my State. And, sir, I feel that it comes with bad grace from him to arraign the Republican party and many who to-day are his political associates for acts of most sacred duty in the dark days of war and rebellion. Had the gentleman been in Missouri from 1861 to 1865 I cannot tell how he would have voted or how he would have shot; I only know he made it convenient to be where there was very little voting and no shooting. It was only when the war was over that he caught his breath and has been fighting in mimic fray ever since.

THRICE WELCOME PEACE.

When the war was over and peace again dawned upon the country I, for one, was willing and ready to welcome the day when the strife and bitterness engendered by the conflict should be lost in the sound of the anvil, the forge, and the loom; when the swords should be beaten into plow-shares and the spears into pruning-hooks; when all our people should fraternize, and together joining hands around the old flag, vie with each other in the kindly offices of a common brotherhood to make our Union strong and our country glorious. When, sir, in later years I kissed the Greenback banner and wrapped the logic and successes of its future about me I am met on every hand with such as the gentleman from the fifth district of my State, [Mr. BLAND,] Bourbons of the deepest dye; men who never learn and who never forget; envious, morose, implacable, wrapped up in their own sordid selfishness; men who never placed themselves in harm's way and yet boast of their prowess. Instinctive defamers of truth, blind to integrity, they are false teachers and blind leaders.

Mr. Chairman, I opine that now my colleague has fully prepared his ammunition, it will not be many days before we will hear, with grip-sack well packed with his effort on yesterday, the greatest speech of his life, of him threading the hills and plains of his district, railing his constituents upon the great public necessity for his re-election.

Mr. Chairman, a few weeks since I listened with great interest to the gentleman from Michigan [Mr. HORR] as he compared the filibustering obstructionists of the House to great historic characters, when my eye intuitively fell upon my colleague, [Mr. BLAND,] and I wondered to whom he should be compared. Don Quixote first seemed to fill the bill, and then better still his squire, Sancho Panza; but, sir, after all, his true prototype only presented himself when I remembered—

Little Jack Horner who sat in the corner
Eating his Christmas pie;
He put in his thumb and pulled out a plum
And said, "What a great boy am I!"

In conclusion, suffice it to say if he is satisfied with his record I am with mine, and to our constituents do I leave the result.

Mr. Chairman, I regard it as an error of the present, when an adversary is unable to meet argument with argument, he should resort to epithet, scolding, or an attack upon the personal character or previous political history of his opponent. Gentlemen elected by intelligent constituencies, but lacking the qualities necessary to develop statesmen, finding it painfully evident that they can never be eminent, rush madly into the growing ranks of those who would be notorious, and the time of the House is wasted and its business

neglected, and weeks and months often consumed in fulminations without merit and in character unfit for the bustings—mere talk for buncombe, intended for home consumption. The matter presented is of no public significance, and of but little account, and the men who resort to it are about on a par with their matter. Denunciation has taken the place of honest discussion and billingsgate for words of sober thought and wisdom. This is wrong; and yet, sir, when under a lax ministration of rule a member is attacked, wantonly attacked, and basely misrepresented, it is but just he should have an opportunity to set himself right.

THE BLAND SILVER BILL.

Mr. Chairman, my colleague having done me the honor to call the attention of the House to a statistical sketch of myself as published in the Congressional Directory, I may offer no apology for paying him a like compliment. It appears that from 1855 to 1865 he resided in the State, then Territory, of Nevada, and that he was largely engaged in mining operations in both the States of Nevada and California. We may anticipate he struck a "bonanza." So that in 1865, when he came to Missouri, he was "well heeled" not only with ready cash but with a large amount of corporate stocks and bonds, yielding him liberal incomes in the gold and silver-producing fields on the Pacific slope. Now, it is but natural that his long association with the silver-producing people of the West, coupled with his interest therein, should make him feel not only very indignant but outraged when, in 1873, Congress demonetized the silver dollar. After much long and restless waiting his opportunity came when it was made possible for him to represent his district in Congress.

The act known as the "Bland silver bill" became a law in 1878. It is true, Mr. Chairman, that the masses of the people all over the South and West were clamorous for the remonetization of silver, but I assert that this sentiment among the people arose chiefly from their false education by a subsidized press and a class of men acting in the interest of the bonanza kings of the Western mines. The people were told that sacrilegious hands had desecrated and destroyed the old "dollar of the daddies." Their pride and prejudice were alike appealed to to popularize the scheme of remonetization, and all in the interest of the few in the East who owned mining stocks and those in the West who operated the mines producing silver bullion. The people really did not need the silver dollar; the legal-tender greenback one and two dollar bills were and are equally as safe and much more convenient for use.

The result of the operation of this bill proves the truth of what I assert, that the people after all do not want the silver dollars, for of the \$100,000,000 which have been coined less than \$20,000,000 are out among the people to increase the circulation, and the balance with all effort made to put it out upon the country is either dormant in the Treasury or locked up as a redemption for silver certificates, when the fact is, and the people are beginning to so understand it, an issue of legal-tender greenback one and two dollar bills would have answered every demand and performed every use as money as that performed by silver.

The Bland silver bill became a law on the 28th of February, 1878, and simply provided for the coinage of a standard silver dollar of 412½ grains of pure silver. From the date of the passage of the bill up to the 31st of May, 1882, the Government has paid out of the Treasury, in greenbacks and gold, the sum of \$104,738,293.23 for silver bullion; and to whom? Those who own mining stocks and mines, thereby fostering an enterprise in which the people have no interest, and from which they derive a worthless use at this fearful cost. Now, sir, I submit that it would have been better for the country and better for the people to have let the silver dollar remain demonetized forever, increased the issue of legal-tender greenback small notes, and saved this \$105,000,000 paid out for silver bullion for payment on the bonded debt.

I am aware that this bill of my colleague remonetizing the silver dollar has been the great hobby of his political life; but, sir, I assert that there has been no act of the American Congress in the last eight years possessing less of real merit. And I again repeat that the measure was not in the interest of the people, but that the motive and the interest was solely with the producers of silver bullion. To them it gave a ready cash market for the product of their capital and labor, out of which they have amassed fabulous fortunes, while to the people it has been an incubus and a curse.

With these facts and figures before the people, if my colleague can derive any glory in his achievement he is most welcome; for surely, sir, no one will envy him.

Does the gentleman say that silver coin is a legal tender in payment of the public debt? I answer true, but the bondholder refuses to receive it. And, sir, I am not advised that a dollar has ever been paid out by the Treasurer on the bonded debt. On the other hand, we do know that of the greenback dollar millions are paid out yearly for both principal and interest. I mention this to show, in a commercial sense, how worthless the use of silver, and how valuable the uses of the greenback legal-tender dollar.

Now, Mr. Chairman, that I may not be misunderstood, I wish to say, I do most emphatically denounce and condemn the act, and the motive of its authors which prompted it, demonetizing the silver dollar in 1873. I also condemn the act, and especially the motive, which prompted its remonetization, and since it is now the law that we must

tolerate a bi-metallic coin, gold and silver, I insist for each a continuance of present fineness and value, and for each unlimited coinage. But, sir, as an original proposition to monetize either gold or silver, I am persuaded that I would oppose and denounce the Shylock scheme.

TREASURY NOTES VS. LEGAL-TENDER TREASURY NOTES.

Mr. Chairman, there is another branch of my colleague's [Mr. BLAND'S] speech, delivered in the House on yesterday, which though not germane to this debate I cannot in justice to the party I represent let pass unnoticed. It is of a public character and pertains to issues of vital importance to the people. I refer to his criticism of the amendment or additional section which I offered on May 19 last, to the bill from the Committee on Banking and Currency, "to extend the existence of the national banks." This amendment was in the following words:

SEC. 11. That from and after the passage of this act all redemptions of national bank notes shall be made by a new issue of legal-tender Treasury notes, to be issued by the Secretary of the Treasury as redemption notes, and such issue shall be in excess of the Treasury notes now in circulation and in amount equal to the national bank circulation.

And the Secretary of the Treasury is hereby authorized to prepare, at the earliest practical period, such amount of legal-tender Treasury notes as may from time to time be necessary for the redemption of all national bank notes, as they may be presented for redemption or payment. All redemption of national bank notes, whether made by the banks or by the Secretary of the Treasury, shall be made in such legal-tender Treasury notes, and in no other lawful money or coin.

The Treasury notes authorized by this section shall be a legal tender for all debts, public and private, and in practicable denominations of one dollar and upward.

My purpose in offering this section as an addition to the bill extending the charters of national banks was, to a certain extent, to curtail their absolute power to expand and contract the currency. I have ever regarded this as one of the worst and most objectionable features to national banking. This amendment provides for a steady volume of currency; that while the banks may under the law retire their currency in fact, or go into liquidation and retire it *in toto*, it can only be done by a redemption in a new issue of legal-tender Treasury notes, to be issued by the Secretary of the Treasury for that purpose, so that, though any one, or all the national banks might go into liquidation and retire their notes from circulation, still the volume of currency with the people would be unchanged, and consequently no disturbance of the commercial interests of the country.

But my colleague [Mr. BLAND] makes serious objection to this proposition. He objects to a redemption in Treasury notes, to be a full legal tender for all debts public and private, and with scornful denunciation exclaims "fiat paper money!" "fiatists!" "Greenbackers!" But that I may present the whole case fairly, and show the true issues between my colleague and myself, I will here call attention to a substitute which he offered for section 6 of the same bill, taken from his speech delivered on yesterday, and which is as follows:

SEC. 6. That national banking associations that may be continued by this act, and those whose corporate existence shall expire, shall be required to comply with the provisions of section 5221 and 5222 of the Revised Statutes in the same manner as if the shareholders had voted to go into liquidation as provided in section 5220 of the Revised Statutes; and the provisions of section 5224 not inconsistent herewith shall also be applicable to such associations.

That all the moneys deposited in the Treasury of the United States for the purpose of redeeming the circulation of national banking associations shall be deemed surplus revenues, and used in the payment of the current expenditures of the Government and in the extinguishment of the interest-bearing debt of the United States in the same manner as other surplus revenues are authorized to be expended.

That for the purpose of retiring and canceling the notes of national banking associations surrendering their circulation the Secretary of the Treasury shall cause to be printed and engraved Treasury notes of the United States, of the denominations of five, ten, twenty, fifty, one hundred, and one thousand dollars, bearing such inscriptions and devices as he may approve, to be exchanged for the bank notes above described on presentation of the same at the Treasury; and the Secretary of the Treasury shall cause to be issued said Treasury notes in lieu of such bank notes as shall become the property of the Government in payment of taxes or otherwise; and that the bank notes for which Treasury notes shall be substituted shall be destroyed.

That the Treasury notes issued in pursuance of this act shall be receivable and payable for all dues and demands for which national bank notes are now by law receivable and payable, and shall be exchangeable for legal-tender notes when presented in sums of \$100 or more for that purpose at the Treasury of the United States, but when so exchanged shall be paid out of the Treasury again as other current funds; and that said Treasury notes shall be redeemable at the pleasure of the United States, in legal-tender notes or coin, at the option of the Government.

EFFECT OF THE BLAND SUBSTITUTE.

This substitute clearly contemplates the continuance of national banking associations under the provisions of existing law, and only proposes to affect such banks as may from time to time go into liquidation. It contemplates that the retiring bank shall deposit with the Treasurer lawful money equal to the amount of its circulation—which deposit shall be deemed surplus revenue—and then the bank may withdraw its bonds. The only change thus far proposed by this substitute is that the redemption fund deposited by the bank "shall be deemed surplus revenue." The second proposition in the substitute is that the Secretary of the Treasury shall issue Treasury notes which "shall be receivable and payable for all dues and demands for which national banks are now used," to be exchanged for bank notes on presentation to the Treasury and "redeemable at the pleasure of the United States in legal-tender notes or coin at the option of the Government."

Thus it will be seen I have fairly stated the changes of existing law proposed by the said substitute. To these propositions I have serious objection. First, it permits a retiring bank, with a circulation of \$50,000 or \$500,000, to gather up of the lawful money of the country, legal-tender notes and coin, an amount equal to its circulation and deposit the same in the Treasury here at Washington. The bank may be located in the interior of the country, in the West, or in the South, far removed from the capital. Now, sir, I urge that the withdrawal from circulation of so large a fund in any locality, more especially from the interior, cannot result in anything less than a stringency in the money market, and must to a greater or less extent cripple trade and commerce and unsettle prices of production and labor.

And, sir, the fact that such deposit shall be regarded a surplus revenue in the Treasury to be paid out for Government dues does not return it to the section of country from whence taken. And more, it is not certain it will leave the Treasury at all for many months. As surplus revenue, it can only be paid out upon appropriations, and we all know that appropriations are made upon the basis of incoming revenue by taxation in some mode. So that the conclusion is inevitable that my colleague's substitute permits, through his proposed method of depositing lawful money for bank circulation, the liability of dangerous contraction, which may in the disposition of banks for the ends of their selfish greed amount to many millions of dollars within a period of sixty or ninety days, and for aught contained in the law or this proposed substitute there are no means to prevent.

The proposition of the gentleman to issue his proposed Treasury notes in exchange for bank notes is no relief, for such exchange neither increases nor diminishes the circulation. The banks have forced a contraction of fifty or one hundred million dollars for the redemption of their notes; commerce, labor, and production may languish, panics may come, and the country be racked by financial convulsions. Money will be dear, and prices correspondingly low; ruin may come to every industry, and yet, sir, under the theory of this substitute, or the law as it now is, there can be no relief to the country or its bankrupt people.

It is well known that in the past banks have exercised this power in furtherance of their speculative schemes to the detriment of trade, the embarrassment of commerce, and the distress of the people. And yet, sir, my colleague, actuated by some strange incentive I cannot account for, but under the cloak of the semblance of a remarkable philanthropy, with a full knowledge of the fact that the banks have used this power to amass fabulous fortunes of ill-gotten wealth at the sore cost of the people, indorses this power and their privilege, and in his substitute recognizes and permits its perpetration.

EFFECT OF THE RICE AMENDMENT.

Now, sir, I submit that my amendment directly by its terms prohibits any such wholesale contraction of the currency by the banks; it prohibits all contraction. By its express terms it proposes to make redemption by the banks of their circulating notes by a deposit of lawful money with the Treasury no longer possible, and expressly requires that all such redemptions should be made by legal-tender Treasury notes. More than this, it prohibits the banks from depositing their own notes and withdrawing their bonds; it provides that either they or any person may exchange at par the bank's "promise-to-pay notes" for legal-tender Treasury notes. So that as fast as bank notes are retired these legal-tender notes take their place, and the volume of the currency with the people continues thus unchanged. At the same time, the Government still holds the bonds deposited for redemption, and when the retiring bank's notes are all thus redeemed, the bond is, as a matter of course, paid off and will be canceled. If my colleague can see any "gratuity" in this to the banks his mental acumen is decidedly more bright than mine.

But will the gentleman say that the Government has no right to pay off and cancel the bond in this manner; that it has no legal right to do indirectly what under the law it cannot do directly? I answer, first, the Government has thus in effect paid off the bond in money the equivalent of coin, so that no one is cheated, no one is defrauded; second, the banks were organized and under their charters endowed with remarkable powers and liberal franchises for the purpose of furnishing the people and the country with a solvent and stable currency; they were designed as beneficent institutions, and it was expected they would be honest with the people. But time has demonstrated that they are the wanton oppressors of the people; that they know no law and are governed by no law, except so far as it caters to their selfish greed. Under a formal compliance with chartered power they have become despotic masters of the money volume of the people; they expand and contract as may be their opportunity for gain. Without regard to law or forms of law they demand and receive the highest rates of interest the market will bear; and when Congress proposes remedial legislation in the interest of the Government and people they boldly threaten they will precipitate upon the country a financial crisis.

Now, sir, this amendment simply proposed that national banks should be shorn of so dangerous a power; that banks might, if they choose to do so, retire their circulating notes, but not to the detriment of the business and commercial interests of the country, even though the result might be, in the manner proposed, the pay-

ment and cancellation of their deposited bonds. But the gentleman complains that "there is no provision in my amendment for winding up national banks, or compelling them to redeem their bonds on deposit. I answer existing law, which the gentleman indorses, is ample for this purpose. The existing law, coupled with my proposed amendment as to the mode and manner of the redemption of their circulating notes, I think will work well. And as to the deposit bonds, my plan proposes payment and cancellation. I, sir, am in favor of embracing every reasonable opportunity to pay the bonds, and thereby stopping the drain upon the resources of the country for interest. Does the gentleman say he is not in favor of payment?

Again, sir, my proposed amendment exchanges legal-tender Treasury notes for the notes of all banks which may go into liquidation as well as the notes of banks retiring their notes for purposes of contraction. Now, sir, under this system I suggest that it would not be long before the country would be amply supplied with a legal-tender national money currency, so that national banking would cease to be profitable and from utter exhaustion be compelled to retire from the contest. With a full volume of Treasury-note legal-tender currency in the hands of the people the days of national banks will be numbered.

MR. BLAND AND THE NATIONAL BANKS.

In this connection, lest at another time I may overlook it, I desire to call the attention of the House and the country to the anomalous position of my colleague in relation to national banks. The people of our State, and especially of his district, have been led to believe that not only he but his party are opposed to national banks. But so far as my colleague [Mr. BLAND] is concerned, this is a mistake; for, sir, I find, upon looking into the RECORD, that he has avowed himself as the ardent champion of national banks and the earnest advocate of their perpetuation. I read from the RECORD of the 11th of May last, page 11, and submit that the gentleman's tortuous professions and conduct may require from him a little explanation at home:

The following proposed substitute was submitted by Mr. BLAND:

"A bill to retire the circulation of national banks, and to continue them as banks of discount and deposit.

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any national banking association organized under the acts of February, 25, 1863; June 3, 1864, and February 14, 1869; or under sections 5133, 5134, 5135, 5136, and 5154 of the Revised Statutes of the United States, may, at any time within two years previous to the date of the expiration of its corporate existence under present law, and with the approval of the Comptroller of the Currency, to be granted as hereinafter provided, extend its period of succession, by amending its articles of association, for a term of not more than twenty years from the expiration of the period of succession named in said articles of association, and shall have succession for such extended period, unless sooner dissolved by the act of shareholders owning two-thirds of its stock, or unless its franchise becomes forfeited by some violation of law."

Mr. Chairman, I have no doubt if this bit of the honorable gentleman's political record should happen to fall into the hands of his constituents it would be regarded as not only very interesting reading but very instructive. Notwithstanding all assurances and professions of opposition to the continuance of the corporate existence of national banks, we are here shown that he is their advocate and champion. It is true that in section 4 of this substitute he limits their power from banks of issue to banks of discount, exchange, and deposit; but, sir, I ask in all sincerity, why should the Government favor and foster these moneyed institutions as the pet wards of the people? What motive, I would ask, has persuaded the gentleman to become the champion of national banks?

Is it necessary or for any consideration expedient that the Federal Administration should in any manner assume complications and dangers long since condemned by the popular voice of the American people? Has the gentleman forgotten the lessons of his party, as declared in its national platforms from 1832 down to 1860, the teachings of Jackson, Calhoun, and Jefferson? Whence has he drawn his new inspiration? Certainly not from the people, that he should thus espouse the cause of national banks, which are in truth and fact but cancerous excrescences upon our body-politic, poisonous to the life-blood of free government, and dangerous to the perpetuity of American institutions.

LEGAL-TENDERS VS. COIN.

Again, the gentleman complains that he does not understand my amendment. Mr. Chairman, to any other than a man who at home in the rural districts champions the cause of the people and in Congress the cause of national banks and corporate monopolies, I might be persuaded to offer apology; but, sir, to my colleague I say there is no one so blind as he who, having eyes, will not see, or so dumb as he who will not understand. The gentleman says my proposition "received but slight recognition in the House." Evidently, Mr. Chairman, this "recognition" business troubles him much more than anything else connected with this debate. The RECORD shows that my proposition received 44 affirmative votes, and that 34 of the 44 were Democrats and 2 Republicans.

Forty-four members of this Congress arise in their seats and boldly indorse the legal-tender fiat-money idea of the Greenback party. I have no doubt but the gentleman was astonished. Indeed, sir, I was surprised myself. I am, however, encouraged, for in this vote I see omen of good. The ball set in motion under the leadership of the gallant Weaver in the Forty-sixth Congress is moving on, gathering magnitude, momentum, and power at each revolution; the

star of the people's hope is becoming more firmly fixed in the political horizon; already the day dawn has broken in the East; the inevitable must surely come; the people's money shall be free. "One currency for the Government and the people, the laborer and the office-holder, the pensioner and the soldier, the producer and the bondholder!"

Ay, sir, I ask my colleague, who to-day panders to the dogma of a coin basis, to stand up in the strength of his waning manhood and answer the people whether or not in these declarations he cannot see mirrored his own political handiwork, and, seeing it, answer the people wherefore he has deserted the faith of the fathers, wherefore he could with his party in 1868 declare "one currency for the Government and the people" and in 1882 demand resumption and a coin basis, fiat coin money for the bondholder and monopolists, a legal-tender fiat money Treasury note to pay the debts of Government, and a promise-to-pay irredeemable Treasury note trash for the money of the people. I say to the gentleman that "truth, though crushed to earth, will rise again;" that "one currency for the Government and the people" is a principle indelibly chiseled upon the hearts of the people, and in their own good time will surely bring forth its fruit of equal and exact justice to all.

REDEMPTION OF LEGAL-TENDER NOTES.

Again, Mr. Chairman, my colleague is very much exercised because there is no provision in my amendment for the redemption of the legal-tender Treasury note therein proposed to be issued. And he says:

There is no provision in it for the redemption of the paper money herein authorized to be issued. We take it for granted that it was intended to be, and the effect would be, irredeemable. The terms of the proposition exclude coin redemption.

Now, sir, shrewd and astute as the gentleman may be, I want to say to him squarely and unequivocally that he was never more mistaken in all his life. True, my proposition does not mention, neither does it mean or imply, a "coin" redemption. True, sir, my proposition ignores the gentleman's theory, that a coin basis is either essential or necessary to the validity of the Treasury note issued by authority of law as money. The gentleman assumes, which is the accepted theory of bullionists, that money, absolute money, fiat money, can only be made of material of a large intrinsic or money value. And that this intrinsic value must be equal or nearly equal to its money value.

This theory is assumption merely, a cold-blooded, heartless, soulless assumption, unsupported by reason, by law, common sense, or justice. Sir, the fact is that it is the supreme will of the Government constitutionally expressed which makes and creates money, fixes its value, and determines the material of which it shall be made. The different nations of the earth in all time since the dawn of civilization have exercised this power arbitrarily. History proves that different nations have employed different materials of which to make their money. Some have chosen the precious metals, gold and silver, others iron, lead, copper, nickel, and tin, while others have used leather, and even bark. The coinage of money from all these materials has been made in the different periods of the past, and many of them are in use among the nations to-day.

And, sir, that time has never been (save in these later days, in the reign of gold kings) when the power or the right to make, stamp, and impress coinage upon any of the materials named, and thereby make the thing thus coined the money of the realm when made for uses of the people in trade and commerce, and a fine legal tender for the payment of all debts public and private, has never been questioned or denied. Money, without regard to the material of which it is composed, is a thing designed, created, and stamped by authority of the law-making power of a government; and it is money, absolute money, legal-tender fiat money, simply because, and for no other reason, it has been so declared. It is not essential to money that it must possess intrinsic value; intrinsic value is no necessary element of money. Commodity value is no part, no element of money value; for money value, which is the power of money to pay debts, is purely law value, nothing more, nothing less.

STANDARD OF VALUE.

The gentleman talks of a "coin basis" as a standard of value, and in thus asserting he but echoes the sentiment of bullionists and monopolists, when the fact is there is no such thing as "coin" or anything else used in the sense of money being a standard of value. Money, no matter of what material composed, absorbs commodity value, and by operation of law for all uses of money has such value and such only as the law gives it. For the edification of my colleague I call his attention to what the Supreme Court of the United States says upon this subject in an opinion delivered by Judge Strong, in December, 1870, in the case of *Knox vs. Lee*:

Here we might stop; but we will notice briefly an argument presented in support of the position that the unit of money value must possess intrinsic value. The argument is derived from assimilating the constitutional provision respecting a standard of weights and measures to that conferring the power to coin money and regulate its value. It is said there can be no uniform standard of weights without weight, or of measure without length or space, and we are asked how anything can be made a uniform standard of value which has itself no value!

It is hardly correct to speak of a standard of value. The Constitution does not speak of it. It contemplates a standard for that which has gravity or extension; but value is an ideal thing. The coinage acts fix its unit as a dollar; but the gold or silver thing we call a dollar is, in no sense, a standard of a dollar. It is a representative of it.

The court is here speaking of the greenback dollar created by the legal-tender act of 1862; and they not only say that "the legal-tender acts do not attempt to make paper a standard of value," but say more, that the "gold or silver thing we call a dollar is in no sense a standard of a dollar; it is a representative of it." Now, I submit, if it be true that commodity value of the material of which money is made be not essential to its money value when coined, if it be true that money, whether composed of the precious metals or paper, be not a standard of value, (both of which propositions are asserted and affirmed by the highest court in the Government,) then I ask in all reason why may not Congress ordain that money be made of and on paper in the form of full legal-tender Treasury notes?

CONSTITUTIONALITY OF THE LEGAL-TENDERS.

The Supreme Court, in the case of *Knox vs. Lee*, above cited, held, under the act of February, 1862, that the greenback dollar was lawful money and legal tender for the payment of all debts contemplated in the act. They not only say that the act itself is constitutional but that Congress had the power under the Constitution to make paper money and to declare it a legal tender. I read again what the court say:

Even the advocates of a strict literal construction of the phrase "to coin money and regulate the value thereof," while insisting that it defines the material to be coined as metal, are compelled to concede to Congress large discretion in all other particulars. The Constitution does not ordain what metals may be coined, or prescribe that the legal value of the metals, when coined, shall correspond at all with their intrinsic value in the market.

Nor does it even affirm that Congress may declare anything to be legal tender for the payment of debts.

The only provision in the Constitution relating to the power to create and make money is contained in article 1, section 8, paragraph 5, and reads as follows:

The Congress shall have power * * * to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures.

And in section 10, which recites that—

No State shall * * * coin money; emit bills of credit; make anything but gold and silver coin a tender in payment of debts.

The people and the States, acting in their sovereign capacity, surrendered to Congress all power and control over the matter pertaining to the creation and issuance of money. As is seen, the language is brief, terse, and without entering into any detail as to how or in what manner the Congress shall perform the important trust simply confers the general power, leaving, and perhaps wisely so, to the wisdom and sound discretion of Congress the mode, manner, and means of carrying the general power so conferred into execution.

Who can say that the precious metals can alone be coined into money? The Constitution does not say so. Who can say that Congress shall ordain the use of copper, tin, or nickel? The Constitution in its recital of the general power conferred upon Congress "to coin money and regulate the value thereof" makes no mention of any of these metals. I answer, then, that no one with any semblance of reason can be justified in such assumption or assertion. Article 1, section 8, of the Constitution provides:

That the Congress shall have power to make all laws which shall be necessary and proper for carrying into execution the foregoing powers, and all other powers vested by this Constitution in the Government of the United States, or in any department or officer thereof.

Hence the conclusion that Congress may, in the exercise of its discretion, enact such laws prescribing of what material money may be made, of what value when coined, and may also regulate its volume and use to all intents and purposes not incompatible with clear terms of the Constitution itself. Upon this point the Supreme Court, in the case of *Knox vs. Lee*, (*supra*), say:

A decent respect for a co-ordinate branch of the Government demands that the judiciary should presume, until the contrary is clearly shown, that there has been no transgression of power by Congress, all the members of which act under the obligation of an oath of fidelity to the Constitution. Such has always been the rule. In *Commonwealth vs. Smith*, 4 Bin. 123, the language of the court was: "It must be remembered that, for weighty reasons, it has been assumed as a principle in construing constitutions by the Supreme Court of the United States, by this court, and by every other court of reputation in the United States, that an act of the Legislature is not to be declared void unless the violation of the Constitution is so manifest as to leave no room for reasonable doubt."

And in *Fletcher vs. Peck*, 6 Cranch, 87, Chief-Justice Marshall said: "It is not on slight implication and vague conjecture that the Legislature is to be pronounced to have transcended its powers, and its acts to be considered void. The opposition between the Constitution and the law should be such that the judge feels a clear and strong conviction of their incompatibility with each other."

It is incumbent, therefore, upon those who affirm the unconstitutionality of an act of Congress to show clearly that it is in violation of the provisions of the Constitution. It is not sufficient for them that they succeed in raising a doubt. Nor can it be questioned that, when investigating the nature and extent of the powers conferred by the Constitution upon Congress, it is indispensable to keep in view the objects for which those powers were granted.

This is a universal rule of construction, applied alike to statutes, wills, contracts, and constitutions. If the general purpose of the instrument is ascertained, the language of its provisions must be construed with reference to that purpose, and so as to subserve it. In no other way can the intent of the framers of the instrument be discovered. And there are more urgent reasons for looking to the ultimate purpose in examining the powers conferred by a constitution than there are in construing a statute, a will, or a contract. We do not expect to find in a constitution minute details. It is necessarily brief and comprehensive. It prescribes outlines, leaving the filling up to be deduced from the outlines.

That would appear then to be a most unreasonable construction of the Constitution which denies to the government created by it the right to employ freely every means not prohibited necessary for its preservation, and for the fulfillment of its acknowledged duties. Such a right we hold was given by the last clause of the eighth section of its first article.

Indeed, the whole history of the Government and of Congressional legislation

has exhibited the use of a very wide discretion even in times of peace and in the absence of any trying emergency in the selection of the necessary and proper means to carry into effect the great objects for which the Government was framed, and this discretion has generally been unquestioned, or if questioned, sanctioned by this court.

This is true not only when an attempt has been made to execute a single power specifically given but equally true when the means adopted have been appropriate to the execution, not of a single authority, but of all the powers created by the Constitution.

And again the court approvingly, repeating the language of Chief Justice Marshall in the case of *Fisher vs. Blight*, 2 Crouch, 358, say:

Congress must possess the choice of means, and must be empowered to use any means which are in fact conducive to the exercise of a power granted by the Constitution. The Government is to pay the debt of the Union and must be authorized to use the means which appear to itself most eligible to effect that object. It has consequently a right to make remittances by bills or otherwise, and to take those precautions which will render the transaction safe.

POWER OF CONGRESS TO MAKE MONEY.

Mr Chairman, the foregoing language of the highest court known to our laws is terse, clear, and explicit, and needs no comment. The power of Congress in the exercise of its own sound discretion to not only coin money but to make choice of the means and material in its so doing, it seems to me cannot be doubted and should not be questioned.

It is claimed that the words "to coin," necessarily, or even essentially within the meaning of the Constitution, imply coinage of metal money. I answer, not at all. The phrase "to coin" is a verb, defining an act to be performed. The language of the Constitution is: "The Congress shall have power"—to do what?—"to coin money and regulate the value thereof."

Now, when I look to lexicographers to see the accepted meaning of the words "to coin" I find it means "to stamp and convert into money," to engrave, to form by stamping. So that I may add that the conclusion is inevitable that Congress may, under the recent powers conferred and in the exercise of a sound discretion, employ other commodities than any of the metals now in use out of which to create and coin money for the Government and the people. Sir, there can be no doubt of this proposition, for in 1862 Congress did, in the exercise of its high prerogative, create, and by stamping with the impress of fiat power, coin the legal-tender greenback dollar. Congress declared that it should be a legal tender for all debts, public and private, except for interest on the public debt and for payment of customs duties. To the extent that the greenback dollar was a legal tender it became absolute money, fiat money; but to the extent that it was not a legal tender, under the law it had no use and no value beyond its promise to pay, credit, which of course needed redemption.

Now, sir, the Federal and State courts have rendered some eighteen decisions declaring the legal-tender act of 1862 constitutional, and, sir, in all the cases touching upon it not one decision is there to be found holding the act invalid. More than this, sir, the decisions, with one exception, have been uniform that the greenback dollar was a good legal tender under the law of the land for the payment of all debts, public and private, except such as by the terms of contract were expressly made payable in coin. That I may not be misunderstood, and that this House, and especially my colleague, who seems to be much befogged on this question and entertains fears as to what the court may do in the future, I again call attention to the language of the Supreme Court in the case of *Knox vs. Lee*. In speaking of the power of Congress under the Constitution to make paper money a legal tender, the court uses this language:

Confessedly the power to regulate the value of money coined and of foreign coins is not exhausted by the first regulation.

The court is here speaking of the right of Congress to change the quantity of metal in coin after having once fixed it; and proceeds:

More than once in our history has the regulation been changed without any denial of the power of Congress to change it, and it seems to have been left to Congress to determine alike what metal shall be coined, its purity, and how far its statutory value as money shall correspond from time to time with the market value of the same metal as bullion.

How then can the grant of power to coin money and regulate its value, made in terms so liberal and unrestrained, coupled also with a denial to the States of all power over the currency, be regarded as an implied prohibition to Congress against declaring Treasury notes a legal tender, if such declaration is appropriate and adapted to carrying into execution the admitted powers of the Government?

No one ever doubted that a debt of \$1,000 contracted before 1834 could be paid by one hundred eagles coined after that year, though they contained no more gold than ninety-four eagles such as were coined when the contract was made, and this not because of the intrinsic value of the coin but because of its legal value.

The eagles coined after 1834 were not money until they were authorized by law, and had they been coined before without a law fixing their legal value they could no more have paid a debt than uncoined bullion or cotton or wheat.

Every contract for the payment of money simply is necessarily subject to the constitutional power of the Government over the currency, whatever that power may be, and the obligation of the parties is therefore assumed with reference to that power. Nor is this singular. A covenant for quiet enjoyment is not broken nor is its obligation impaired by the Government's taking the land granted in virtue of its right of eminent domain. The expectation of the covenantee may be disappointed. He may not enjoy all he anticipated, but the grant was made and the covenant undertaken in subordination to the paramount right of the Government. (*Dobbins vs. Brown*, 2 Jones, (Penn.) 75; *Workman vs. Mifflin*, 6 Casey 362.)

We have been asked whether Congress can declare that a contract to deliver a quantity of grain may be satisfied by the tender of a less quantity. Undoubtedly not. But this is a false analogy. There is a wide distinction between a tender of quantities or of specific articles and a tender of legal values. Contracts for the delivery of specific articles belong exclusively to the domain of State legislation, while contracts for the payment of money are subject to the authority of Congress,

at least so far as relates to the means of payment. They are engagements to pay with lawful money of the United States, and Congress is empowered to regulate that money. It cannot therefore be maintained that the legal-tender acts impaired the obligation of contracts. Nor can it be truly asserted that Congress may not by its action indirectly impair the obligation of contracts if by the expression be meant rendering contracts fruitless or partially fruitless.

We are not aware of anything else which has been advanced in support of the proposition that the legal-tender acts were forbidden by either the letter or the spirit of the Constitution. If, therefore, they were what we have endeavored to show, appropriate means for legitimate ends, they were not transgressive of the authority vested in Congress.

Mr. Chairman, it seems to me unnecessary to pursue this branch of my argument further. I can conceive of no reason or authority for doubting the power or right of Congress, in the exercise of its own sound discretion, to (1) determine the proper commodities for coinage; (2) to make such selection from commodities of much or little commercial value or a commodity of no intrinsic or commercial value at all; (3) to regulate the coinage of all money, and when coined to regulate and fix its denomination or value; and (4) whether such commodity be metal or paper to make it absolute money and a legal tender for all debts, public and private.

But again. My colleague, in speaking of Treasury notes, makes the statement:

If they are not promises to pay under the decision of the Supreme Court, they cannot be made a legal tender for any debt, public or private, and would, therefore, be unconstitutional.

Mr. Chairman, I am surprised at my colleague. I am surprised at the extremity of desperation to which he seems to be driven. Meaning no disrespect, I say to him—bosh. For this last proposition at least he is entitled to commiseration. The gentleman is a lawyer, and in his effort on yesterday he has shown himself to be huge on the Constitution. But really, sir, I do pity the Supreme Court. "A Treasury note cannot be a legal tender for any debt, unless it be a promise to pay!" I pause for the gentleman to tell me and the House the book and page where that decision is to be found.

My colleague seems to be sorely troubled over another proposition relating to the action of the Supreme Court, in reference to which he says:

Cases are now pending in the Supreme Court involving the question whether Congress in time of peace has the constitutional right to issue paper money and make it legal tender for private debts. There is a general opinion entertained by the community that the Supreme Court would hold that Congress has no such power.

Mr. Chairman, who is it that questions the right of Congress "to issue paper money and make it a legal tender for private debts?" I ask again, and repeat, who is it? The gentleman makes a bold, open, defiant charge that it is the popular sentiment of the masses of the people that the greenback dollar will be demonetized, and that the people are to be robbed of the use of the best and most beneficent money they ever had.

That the gentleman should express such a sentiment in the face of the fact that eighteen decisions have been rendered by the Federal and State courts affirming both the legality and constitutionality of the legal-tender act of 1862; in face of the fact that it was the greenback dollar (when sneaking, cowardly gold, in the hands of its servile minions, fled the country or hid from use in dark dens and caverns in the hour of the nation's dire necessity) that came nobly forth, though wounded nigh unto death by Shylock's poniard, and saved the nation from dissolution and disintegration; that it was the greenback dollar that sustained our banner at every battle's front and at last made it possible for fifty million people, the happiest and proudest of all nations, to join hands around the old flag and chant the anthem of the free, "One country, one flag, one people"—I say, sir, that in the face of these facts the gentleman should express such a sentiment I can account for in no other way than that his own wish was father to the thought.

THE PEOPLE LOVE THE GREENBACK DOLLAR.

The gentleman says "there is a general opinion entertained by the community." I ask what community? That resumptionists, bondholders, and Shylocks demand a so damning and wicked wrong I do not deny; but, sir, I do deny that it is the wish or the fear of 99 per cent. of the American people. The masses of the people love the greenback dollar; to them it is honest money; it buys their bread and it pays their debts; it was the money of the soldier and sailor; it has been the solace and hope of the widow and orphan; it gave the country relief in the dark days when bankruptcy and financial ruin stalked abroad at noonday in the years from 1869 to 1874; it stood by the people and the country and bridged over the chasm created by the infamous resumption act of 1875; it has ever been the friend of commerce, progress, and enterprise.

It has been the benefactor of every State, every community, and every fireside home all over the broad land. It has given courage to all labor and production, and it is to-day no less than in all the twenty years of the past the people's and the nation's honest, faithful friend. And, sir, in these later years, notwithstanding the sneaking and whining moan which has occasionally come up from the gold caverns of Wall street, it has so grown in popular favor that its enemies even have been compelled to do it honor. In all the history of our country I assert there never has been a greater necessity or higher reason for the use among the people of an honest legal-tender Treasury-note money than exists to-day. Conceding it was

conceived and called forth as a war necessity, the legal-tender greenback dollar has proved a blessing in peace. And the reason for my colleague's doubt but confirms the truth of inspiration—"God often makes the wrath of man to praise him."

True, sir, I cannot say what our Supreme Court as now organized may decide in reference to these questions, but, sir, I defy reason and argument to answer my position in relation to legal-tender Treasury-note money. And, sir, I will add, taking upon myself the full responsibility of the statement, that the man, set of men, or party, I care not what its name or erudition, who shall dare to lay violent hands upon, demonetize, and desecrate the people's money, the legal-tender greenback dollar, that man or that party's political doom will be sealed. I tell you, sir, that the greenback dollar is loved by the people; as money they regard it as their friend; it is with them and of them in all their commercial intercourses; though crippled they know it is reliable for all their needs and necessities. And, sir, I fearlessly announce, that damned be the hand who dare lay violation upon it.

Again, if I understand my colleague's last proposition, it is that it will be unconstitutional for Congress to issue Treasury notes and make them a legal tender for private debts. He concedes, indeed, that is the meaning of his substitute, (to which I have called attention,) that Congress may issue Treasury notes and make them a legal tender for the payment of all public debts and dues, except the bonded debt; and also a legal tender for all debts due the Government, except customs duties, while for the uses of the people they are merely a "promise to pay," and not a legal tender for anything.

Now, sir, in all candor, in all reason and justice, why should this be so? Bear in mind, there is no question of constitutionality as to the right and power of Congress to create, stamp, and coin legal-tender paper money for the payment of the Government's debts and for payment of debts to the Government; then, why not equally constitutional that they shall be money in payment of debts among the people. Is the right of the Government, the privilege of the Government superior to the rights of the people; is there any reason why the Government should have absolute money and the people a mere promise to pay? I have been taught and supposed it to be true that the people and the Government are one; that the Government is the will of the people acting in a sovereign capacity to do the will of the people; and that Congress is but the voice of the people, alike the guardians of national sovereignty and the sovereigns the people.

ONE MONEY FOR THE PEOPLE AND THE GOVERNMENT.

Why, then, should we not have "one money for the people and the Government?" Congress has power "to coin money"—for whom? I answer, for the Government and the people. I submit, then, is it fair or honest that Congress should make anything money for the Government's use, compel the people to receive it as money, and yet for the people's use be not money at all, no different or better than any citizen's "promise to pay" who is of good credit? I say, sir, that the proposition is preposterous; that it is false in theory; that it is condemned by all reason, law, and justice; and I denounce it as a scheme of the coinocracy and goldocracy of the country to cheat, oppress, and prey upon the necessities of the people and their industries by giving coin as against the paper currency of the people an opportunity through the banks to redeem this non-legal-tender paper currency, and at such premium as they in their avarice may or can impose.

I denounce it, sir, as a scheme of sordid, soulless, and cold-blooded robbery; a scheme to force upon the country a use for gold which to-day has been measurably driven from the marts of trade and hoarded in non-use by the more popular legal-tender Treasury note. Am I not correct? If not, what reason can be given why the people should not have the same Treasury-note legal-tender money that you would furnish the Government? It is shown to be legal, and there is no longer any doubt about its being constitutional. I ask the candid mind to study the proposition a moment, and answer me if it is not an unblushing shame for Congress to issue a full legal-tender note for the payment of debts and dues of the Government to the people, and, with full money property and power to pay its debts, pay it out to the people to be used as their circulating medium and then immediately after having so paid it out turn round and demonetize it?

And yet, sir, this in "undress" is the naked proposition of my colleague, [Mr. BLAND.] But he says the Treasury note proposed by him may be exchanged for "legal-tender notes." What legal-tender notes? He stated in his speech on yesterday the Supreme Court would likely decide the greenback note unconstitutional; and suppose it should, then what? I would not be even seemingly unkind to my colleague. Evidently he is in a dilemma. I will give him opportunity for reflection and pass on. But when and where exchangeable? He says in his proposed substitute:

And shall be exchangeable for legal-tender notes when presented in sums of \$100 or more, for that purpose at the Treasury of the United States.

HOW IT WORKS.

Now, sir, to illustrate my idea of this proposition permit me to suppose a case. A is a Democrat of Mr. BLAND's school. B is a Greenbacker and a sensible man; he knows and understands what

is right and fair, and withal he is a stickler for honest money. A owes B \$80 on a note; it is due and he calls upon him to make payment. B inquires, "What kind of money have you, Mr. A?" He answers, "Treasury notes." But B inquires again, "What kind of Treasury notes?" "Why, sir, they are the Treasury notes proposed by the Bland substitute for the Crapo bill." B at once says, "Mr. A, I cannot take them; those notes are not money; I have no use for promissory notes. I want lawful money or none at all." "But," says A, "these notes are good; they are the notes of the Government, issued by the Secretary of the Treasury." B answers, "True, that all may be, Mr. A, but they are not money, and I cannot take them." Now, this frets A; he tenders his Bland Treasury notes and pleads for mercy, but all to no purpose; B is inflexible.

Now, what can A do? He returns home, calls upon his honored Representative, and says: "Mr. BLAND, I owe that Greenbacker, B, \$80; I have got the money; have tendered it to him, but he refuses to take it; he says it is not money; what am I to do?" Mr. BLAND, I imagine, here exhibits a little uneasiness, but inquires, "What is your money, Mr. A?" A replies, "Some of your Treasury notes!" "Ah," (coloring in the face,) Mr. BLAND says, "that is strange, but I tell you, send them to Washington and exchange them for legal-tender notes." A goes to the express office and sends his \$80 to the Secretary of the Treasury. In due course of mail he receives a letter from the Treasury Department advising him of the receipt of the \$80, for exchange for legal-tender notes, but further advising him that under the provisions of the Bland substitute no exchange can be made for a less sum than \$100.

Now, to be brief with this recital: A, after much trouble and an expense of \$3.50 or \$4, obtains the required amount of legal-tender notes, again calls upon B and takes up his note. After a few days A again calls upon his worthy Representative, Mr. BLAND, but is not in his usual good humor, and says, "BLAND, there must be something wrong about this Treasury-note business of yours; besides my time and the delay in paying that little note it cost me \$4 to get those legal-tender notes from Washington. Mr. BLAND, I don't believe I want any more of your Treasury notes." My colleague is evidently in another muddle. Out of compassion for him I will leave him to his reflections and pass on. Again, the substitute of my colleague provides:

And that said Treasury notes shall be redeemable at the pleasure of the United States, in legal-tender notes or coin, at the option of the Government.

ABSOLUTE MONEY. AN HONEST DOLLAR.

I submit, Mr. Chairman, I am again met with a very singular proposition. He, as is seen, proposes a Treasury note which is not a legal tender with which to redeem the national-bank notes; they are not money for any use of the people—to be redeemed at the pleasure of the United States in legal-tender notes—or coin, at the option of the Government. Now, I submit again to the gentleman, if it be true, as he asserts, that coin money is the only and true basis of a circulating medium for the country, will it ever be possible for the people with his Treasury notes ever to get any coin on them; first, for the reason that the Government may upon his proposition redeem in legal-tender notes; and, second, for the reason that from his declaration and argument the legal-tender notes will be held by the Supreme Court unconstitutional, and for that reason, on his theory, must all very soon be withdrawn from circulation, so that we will only have coin left for redemption, and that to be used only at the option of the Government.

I assert that a more cunningly devised scheme for the direct benefit of bankers and brokers could not possibly have been drafted. And, sir, upon the theory of his substitute it does not matter what the Supreme Court may decide as to the constitutionality or unconstitutionality of the greenback dollar. Still, the effect of his Treasury-note system means an opportunity for money and gold sharks to speculate upon the currency of the people.

On the other hand, the Treasury note proposed in my amendment is not only an honest dollar to pay the debts of the Government but it is also an honest dollar to pay any debt the people may owe. It is a legal tender, and to all intents and purposes for the uses of the people and the Government is absolute money, and will pay all debts, public and private, except such as by the terms of contract may be required to be paid in coin.

But the gentleman says it is irredeemable. I answer every payment of it is a redemption. Like gold and silver it passes from hand to hand, performing every office of money, to-day, to-morrow, and forever, or at least so long as the Government may continue to exist. It is a legal tender for all debts, public and private; it is what the people need for their accountings, and in their buying and selling of commodities it performs every office of coin money. Why, then, or for what reason, should it have a coin basis or a coin redemption? What farmer, what laborer, what manufacturer or producer, asks for or even thinks of a coin redemption of the greenback dollar? Why redeem? Do you receive coin? What more of value is it and how much more of commodity will it buy? The answer must be, not any. Then, again, I ask who wants coin redemption? I answer, sir, none other than the bondholders, the capitalists, and the gold ring.

In my amendment I asked for a Treasury note to take the place of national-bank circulation, and asked that it be a full legal tender for

all debts, public and private. If my proposition had become a law, there could be no pretense that it would change or alter subsisting contracts. And therefore I say to my colleague while we propose to be just to the bondholder, it is also our mission to be just and honest with the people; that while we would faithfully and honestly pay every dollar of the public debt, the National party demands of the Government an honest money with full debt-paying power to all the people alike. Barring special contracts and conceding the inviolability of all contracts, we know no reason why coin money should be made a legal tender for some purposes and not for all, and likewise we know of no reason why paper, stamped and coined by authority of law to perform the office of money, should not also be absolute money and a legal tender for payment of debts of the Government and all the people alike.

And, sir, I submit, if there shall be a discrimination as to choice of material out of which money for the Government and the people shall be made, let that discrimination be made in favor of paper money. First, for the reason that it costs the Government but little to produce it. Second, clothed with the fiat of the law, it performs all the functions of money in all the monetary departments of the Government, and performs every want, every necessity, and every beneficence required to be performed by money among the people. Third, it will be purely and absolutely an American institution, growing with our growth and strengthening with our strength; in all times it lives with the people, abides with the people in all their prosperity, their greatness, and their grandeur; abiding all our misfortunes, standing by the people and the Government, it boldly braves all danger, and, never doing or knowing dishonor, only falls when the nation in the evolution of the ages may sink to rise no more. Fourth, gold, on the other hand, is and always has been a sneaking, dastardly coward, shrinks from every calamity, unfaithful in every hour of national distress; a fawning sycophant in prosperity, but in every national adversity a tyrant and despot. And when danger threatens the life of the body-politic it hies to the fastnesses of dark caves and caverns, or flees to a foreign land—a veritable thief, bearing off our substance and robbing the people and the Government of the life-blood of national power, national preservation, and national existence.

In conclusion, sir, I for my people, for my country—and meaning, sir, all my language imports—demand an honest-money currency for the Government and the people.

ANALYSIS OF THE VOTES ON THE BILL TO EXTEND THE CORPORATE EXISTENCE OF NATIONAL BANKS.

Mr. Chairman, I now ask permission to print in the RECORD as part of my remarks the vote on the Crapo bill, to extend the charters of national banks, and the material substitutes and amendments offered thereto.

The bill had been reported by the Committee on Banking and Currency, and being upon the House Calendar so far down in the order of business that it could not possibly be reached or considered at this session, if by this Congress, except under a suspension of rules by a two-thirds vote, on Monday, the 1st day of May last, Mr. CRAPO, chairman of the Committee on Banking and Currency, submitted to the House the following resolution:

Resolved, That the bill (H. R. No. 4167) to enable national banking associations to extend their corporate existence be taken from the House Calendar and made the special order for the 9th day of May instant after the morning hour, and from day to day thereafter until disposed of, not to interfere with the consideration of general appropriation and revenue bills; said bill to be considered by the House as in Committee of the Whole, shall be open to amendment, including committee amendments and an amendment restricting the deposit of lawful money and withdrawal of bonds at pleasure; also an amendment in reference to the jurisdiction of State courts where a bank is situated in the trial of suits with citizens of that locality; also in reference to loans upon real-estate security; and such other amendments and restrictions as may be germane to the bill, or entire substitutes therefor.

Substantially the same resolution has been submitted to the House on two former occasions and was defeated by an ay and no vote. On this occasion the resolution was adopted, two-thirds of the members voting in the affirmative, and the following is the vote:

[NOTE.—Republicans, Roman letters; Democrats, italics; Greenbackers, small capitals.]

BRUMM.	Hewitt, Abram S.	Phister.	Tillman.
BURROWS, Jos. H.	Hewitt, G. W.	Pound.	Van Voorhis.
Carlisle.	Hoge.	Prescott.	Wadsworth.
Caswell.	Houk.	Ranney.	Wait.
Cornell.	Hubbell.	Reagan.	Ward.
Covington.	Jorgensen.	Rice, John B.	Washburn.
Crowley.	Knott.	Richardson, Jno. S.	West.
Davis, Lovendes H.	Leedom.	Ritchie.	Wheeler.
Dawes.	Le Fevre.	Robeson.	White.
Dibrell.	Marsh.	Robinson, Wm. E.	Willits.
Flower.	Martin.	Ryan.	Wood, Benjamin.
Frost.	McCook.	Shackelford.	Wood, Walter A.

Thus it is seen that 40 Democrats voted for the resolution, and 38 refused to vote at all; thereby, by the action and non-action of Democrats, the resolution was adopted by a two-thirds majority.

THE BLAND SUBSTITUTE.

Upon the Bland substitute for the Crapo bill the vote was as follows:

YEAS—71.

Aiken.	Colerick.	Hewitt, G. W.	Reagan.
Anderson.	Converse.	Hoge.	Scales.
Armfield.	Cook.	Holman.	Shackelford.
Atkins.	Cox, William R.	House.	Singleton, Jas. W.
Belford.	Cravens.	Jones, James K.	Singleton, Otho R.
Beltzhoover.	Culberson.	Kenna.	Sparks.
Berry.	Davis, Lovendes H.	Knott.	Stocklager.
Blackburn.	Dugro.	Leedom.	Tillman.
Blanchard.	Dunn.	Le Fevre.	Turner, Henry G.
Bland.	Finley.	Manning.	Turner, Oscar.
Buchanan.	Forney.	Matson.	Vance.

INTERNAL-REVENUE TAXATION.

Mr. Chairman, as to the bill now under consideration, I am opposed to it, and for, in my own judgment, manifest good and sufficient reasons, shall give it my negative vote.

It has been stated, repeated, and reiterated by the gentlemen who have advocated the passage of this measure, and as a reason for its becoming a law, first, that we have already an overflowing Treasury; and, second, that it is our duty as legislators to, so far as possible, relieve the onerous burdens resting upon the people. It is said that our internal-revenue system is a relic of the late war and that since the war has ended and the country has long since settled down to the even tenor of the good old ante-bellum times this tax may be dispensed with and ought to be removed from our statute-books.

It is true the war is ended, and that for a period of seventeen years the country has been measurably peaceful and quiet; but gentlemen must not forget that as an incident and bequest of that long and bloody struggle the debt still remains, an incubus upon the nation's prosperity, the interest on which is to-day sapping the life-blood and eating up the substance of the people.

In 1865, when the tread of hostile armies had ceased to reverberate through the land, when President Lincoln had issued his proclamation announcing to the world that at last the end had come, the Union saved, and that the authority of the Federal Government was again supreme, the aggregate unpaid war debt amounted to about \$2,600,000,000.

Large as our debt then was it is demonstrable that it was clearly within the power of the Government to have paid every dollar, principal and interest, within the period of the next succeeding ten years, and this, Mr. Chairman, I assert might have been accomplished without violating any contract with creditors or the imposition of any additional tax burden upon the people. At that period less than one-tenth of our aggregate debt was payable in coin; under the terms of the contract creating it, more than nine-tenths

was payable in lawful money of the United States, and every dollar of it was subject to option payment by the Government on or before the 1st of January, 1869.

The total revenue collected for 1865 was \$620,000,000, and the total expenditures were \$385,000,000, leaving a surplus of \$235,000,000. In 1866 the Government's current contingent expenses were \$206,000,000, and in 1867 \$229,000,000. Now, with an annual income of \$620,000,000 flowing into the Treasury, the annual surplus, averaging \$350,000,000, would have paid every dollar of the public debt, principal and interest, within the period I have named, and we would have still had a surplus to spare. In 1865, 1866, and 1867, money was plenty, liberal prices were paid for labor, and produce of all kinds found good markets and remunerative sales all over the land. The country from North to South, from East to West, was never more prosperous.

And sir, I assert that there has never been a period in our American history when the burden of taxation bore less heavily upon the people and the country than it did within the period I have named. Our revenue system, especially the laws relating to internal revenue, was more just to the people and more evenly distributed the burden of taxation among all the people than now. And it will be remembered that in those prosperous years it was easier to collect the \$620,000,000, and produced less distress to the country than to collect \$400,000,000 or even \$300,000,000 at any period since. This being true then, I appeal to gentlemen on the floor to answer, why has not the nation's war debt been paid? And why to-day, instead of these weeks and months consumption of our time and the nation's energies in devising plans to filch from the pittance income of labor and production to the exclusion of capital and moneyed rings, millions of dollars for interest money, are we not out of debt?

Mr. Chairman, the answer to my foregoing inquiries is obvious. The capitalists and bankers of the country, the moneyed Shylocks of America and Europe, profiting by their four years of profitable experience in manipulating our currency and bonds, and profiting, too, by the grand success of their English masters in plundering the people of England, through the instrumentality of a public debt, and as an inducement for their accomplishment, insidiously announced the damnable heresy that "a national debt is a public blessing." And to this they supplemented, with siren tone and patriotic eloquence:

We have just emerged from a great national struggle which cost us dearly in blood and treasure. We are weary and should have rest. This generation has performed its part well; it has furnished with a lavish hand the sinews of war in blood and treasure, and covered itself all over with glory in saving the Union. Now it is but just that we divide honors with those who come after us. Let the posterity of honored fathers pay this debt.

When in fact and in truth these sirens in the days of the people's rejoicing were but masked thieves, "wearing the livery of heaven" but to rob and plunder the national Treasury. Their real purpose was to fasten upon the neck of American industry and production an onerous interest-bearing and interest-producing irredeemable debt. Their purpose was to fund the debt into long-time bonds, and for the benefit of banks and those who had large capital for investment.

A DEBT A CURSE TO A NATION.

It is an axiom that a debt is a curse to a nation as it is to the individual. The funding into long-time coin bonds a lawful money contract debt, as was done in the years that followed 1865, when the Government and the people had the means at hand of a speedy liquidation, I regard as one of the most infamous acts of American legislation in our history. It was legislation favoring the rich and capital, the bankers and corporate monopolists, and the oppression of labor and production.

Under the revenue law as it stood in 1865 taxation rested measurably alike upon all the people. It reached with something of equitable fairness and drew in equal proportion from the income of the millionaire, the mechanic, and the humble farmer; it drew from the gains of the artisan and the manufacturer; it received aid from trades and professions, and from the merchant, the operators and owners of telegraphs and railroads; it reached the bonanza kings of the mines and the jobbers and speculators in bonds and mortgages on Wall street.

The debt had been created in the interest of the people, all the people; all were equally benefited, and therefore all morally and legally bound, in the ratio of their financial ability, to aid in its payment. Good financial policy demanded payment while the country was prosperous and had to hand abundance of means of payment; the war was ended, the nation's heart was proud, and the people were full of rejoicings; the nation's Treasury was overflowing, \$240,000,000 in 1865, and without the revenue reductions which were soon made, the decrease in fiscal expenditures, and the increase of trade and business, we may reasonably anticipate, would have largely increased this amount to, say, \$400,000,000 of annual surplus.

WHY IT WAS NOT PAID.

Why, then, was not the debt paid? Nine-tenths of it was a lawful money contract, and contracted upon the greenback basis of value, and the greenback was a legal tender for it in payment. I answer, Mr. Chairman, it was not paid because we could not pay, nor because we had not the means of payment; it was not paid because the masses of the people did not want it paid, not because

the masses of the people did not wish the Government to be free from debt; but it was not paid because about one-half of 1 per cent. of the American people demanded that it should not be paid. And, sir, this one-half of 1 per cent. were the representatives of the great consolidated capital of the country—the men who own railroads and telegraphs, the millionaires, the bonanza kings of our gold and silver mines, the bond gamblers and stock jobbers on Wall street, the same class of men who in 1862, by threats of violence to the success of the Union's cause, bullied and badgered Congress to adopt the two exceptions to the law creating the greenback dollar, and then afterward with thieving avarice and skillful knavery defamed its credit until it was only worth thirty-eight cents on the dollar. It was not paid because the capitalists of the country, who had discredited the greenback, the people's money, the money that paid the soldier in the field and the sailor at the mast, then with their gold bought it up at thirty-eight cents on the dollar and invested in the Government 5-20 bonds at par, demanded that the debt be funded. These were the men, the only men, who demanded that the debt should not be paid. And why did they do it? The reason is apparent. They demanded that the debt should be funded into long-time, non-taxable bonds, and their motive was, first, it afforded them a secure investment—I may say a lucrative investment—for their surplus thousands and millions; and second, funding of the debt meant a large reduction of internal-revenue income and their consequent release from all the burdens of taxation as then existed. To the class of persons to whom I have referred to pay the debt implied that they would be required to pay 10 per cent. upon all their incomes in excess of \$5,000 and 5 per cent. on all sums over \$600 and under \$5,000, while to fund this debt implied a release from all Federal taxation.

THE EFFECT OF NON-PAYMENT.

It is estimated that the annual income of William H. Vanderbilt is \$30,000,000. Under the law as it was in 1865 he would be required to pay into the national Treasury per annum \$3,000,000. And Jay Gould, Huntington, Belmont, and others from one to two millions.

I repeat, the funding of the war debt implied a release of all capital and incomes from internal-revenue taxation, and a transfer of the burden of the payment of the interest and principal of this debt from the shoulders of those most able, and for highest considerations of justice and fair dealing under the greater obligation to pay, to the shoulders of the delving and toiling masses.

But, sir, cowardly and selfish as was the appeal of capital, and servile and censurable as was our then sitting Congress, the demand was heeded, the debt funded, and an act passed to so amend our internal-revenue law as to release capital and Shylocks who had amassed their millions by "bearing" the people's money on the one hand, and taking every advantage of the Government's necessities on the other during the war, from all taxation in aid of paying a single dollar of the debt. So that to-day, sir, this debt, by virtue of the servile and I may say iniquitous legislation of the past, still rests an incubus upon the people, a very vampire upon the life of our struggling industries.

The disposition of past Congresses, including that of 1865 and 1866, has manifestly been opposed to the payment of the public debt; each and every reduction of the revenue is significant of such purpose.

The following table, compiled from official sources, shows the reductions of internal revenue commencing in July, 1866:

Act of July 13, 1866.....	\$65, 000, 000
Act of March 2, 1867.....	40, 000, 000
Act of February 3, 1868.....	23, 000, 000
Act of March 31, 1868, }.....	
Act of July 20, 1868, }.....	45, 000, 000
Act of July 14, 1870.....	55, 000, 000
Act of June 6, 1872.....	21, 131, 000
	249, 131, 000

To which may be added the reductions made in revenue from customs:

Act of July 14, 1870.....	\$30, 000, 000
Act of May 1, 1872, }.....	
Act of June 6, 1872, }.....	31, 215, 409

making a grand total of annual reduction of \$310,346,409.

A RETROSPECT.

In looking back over the past seventeen years of our national history I ask, can there be any doubt of the ability of the Government to have paid every dollar of the public debt, in good faith to all creditors, and without distressing the country or the people. And I submit, would it not have been far better to have done so. And I further submit, can it be conceived that any honest, philanthropic statesman, standing in the sunlight of the surroundings of 1865 and 1866, legislating as the people's financier, with full knowledge of the resources of the Government and the people, adopting as the true policy of Congress what under similar circumstances would have been his own policy as an individual, could have done otherwise or voted otherwise than for payment? Treating the cause of the country as his own, and her interests as his own, I unhesitatingly say he could not. The sequence then is inevitable. Congress servilely bowed to the demands of the moneyed princes, and bound the people in chains and slavery.

Mr. Chairman, I have made this brief review of our war debt and criticised the action of Congress in relation to it mainly for the purpose of showing to this House and the country how completely Congress ever has been and now is under the control of capital, and how servilely it has ever yielded to the demands of capital, to the prejudice of the rights and the oppressing of the masses of the people. I have done so to show that it has ever been the fixed determination and purpose of the controlling majority in Congress to not only procrastinate payment of the public debt, but virtually to place it beyond the reach of payment. This object has been accomplished by two different methods, but both equally effective in producing the same end. One method has been funding into long-time bonds. And the other is the gradual reduction of revenue income, so as to render payment impossible. I charge, sir, that there is a fixed determination to so manipulate the finances of the country as to make the payment of the public debt impossible.

HOW STANDS THE CASE TO-DAY?

On the 30th of May last, as shown by the report of the Secretary of the Treasury, there was due of the three-and-a-half bonds (extended) \$475,000,000. Now, sir, the best that can be hoped for, if the income remains unchanged and no material increase in expenditures for the fiscal year 1883 over 1882, is that we will be able to pay during the fiscal year of 1883, out of the combined sum of sinking fund and surplus, about \$120,000,000 of this debt; when, sir, the fact is appropriations already made by this Congress for pensions, for river and harbor improvements, and other purposes, are in excess of appropriations for 1882 by at least \$50,000,000, which upon a most careful calculation will leave very little in excess of the estimated \$65,000,000 sinking fund for payment on the public debt.

This bill proposes to reduce the revenue derived from internal taxation by about \$26,000,000; and, sir, we may anticipate, from the character of the numerous amendments proposed and the zeal with which they are urged, that the bill upon its final passage will bear upon its face a reduction of revenue amounting at least to \$35,000,000. I therefore denounce this bill as but another scheme of capital, in its relentless war upon industry, to procrastinate and so tie up the hands of the Government as to render it impossible to pay the public debt.

Mr. Chairman, gentlemen on this floor have denounced our internal-revenue system, in fact all internal-revenue taxation. And my colleague [Mr. BLAND] declared in his speech on yesterday that "this internal-revenue system is a system of espionage inconsistent with the liberty and freedom of the citizen." So long as the Government requires revenue I know of no way to obtain it only by some system of taxation. All revenue is derived directly or indirectly from the people. All customs duties are an indirect tax upon the consumers of imported goods, and to the extent the tariff protects our home manufactures the people are taxed upon their consumption of our home production, not, however, for revenue but for the benefit of the manufacturer. As to the right of the Government to levy taxes for all necessary revenue there can be no question.

And, sir, I conceive it makes but little difference how or under what system taxes are levied upon the people, only that the law shall so distribute the burden that it shall rest with equitable fairness upon all the people alike and in proportion to their ability to pay. The genius of our American system of government is equal protection to all her citizens, the rich, the poor, the high, and humble. It protects alike all trades, all arts, all professions, all industries, and all capital; hence the correlative obligation of the citizen to maintain and protect the Government in the ratio of his ability and means. None should be exempted, no one should be excused.

INJUSTICE OF THE PRESENT INTERNAL-REVENUE SYSTEM.

I am prepared to not only admit but to prove that our present internal-revenue system is not only unjust but damnable in principle, and this especially for the reason of its apparent designed iniquitous discriminations.

Under existing law it imposes its burdens upon a class of our people least able to bear it, while thousands of millions of producing wealth and billions of capital remuneratively employed neither directly nor indirectly pays a single dollar of the annual revenue collected for the maintenance of the Government. Over \$2,400,000,000 of capital invested in municipal, county, State, and Federal bonds is either by law exempted from all taxation, or protected by it in hiding from assessment, by the shrewd device of capitalists. And to this sum may be added \$600,000,000 more invested in individual notes, bonds, and mortgages. All this and more has come by the persistent effort of capital to bend the acts of government to sordid and selfish purposes. And while I cannot, on account of the real needs of government for revenue, advise a repeal of existing law, I do demand, in the name of justice and in the interest of the people, a revision. And I suggest in making such revision, as also the revision contemplated by the tariff, that it may be well to heed the noble sentiment uttered by General Jackson in his memorable veto message of the United States Bank, when he said:

It is to be regretted that the rich and powerful too often bend the acts of government to their selfish purposes. Distinctions in society will always exist under every just government; equality of talents, of education, and of wealth cannot be produced by human institutions.

In the full enjoyment of the gifts of Heaven, and the fruits of superior industry, economy, and virtue, every man is equally entitled to protection by law. But

when the laws undertake to add to these natural and just advantages artificial distinctions, to grant titles, gratuities, and exclusive privileges; to make the rich richer and the potent more powerful; the humble members of society, the farmers, mechanics, and laborers, who have neither the time nor the means of securing like favors to themselves, have a right to complain of the injustice of their government. There are no necessary evils in government. Its evils exist only in abuses. If it would confine itself to equal protection and as Heaven does its rains, shower its favors alike on the high and low, the rich and poor, it would be an unqualified blessing.

Nearly every change or reduction in the internal-revenue law since 1865 has been upon the demand of and in the interest of capital. And, sir, such is the fact and the rule as applied to this bill. This bill comes here in charge of the chairman of the Committee on Ways and Means, [Mr. KELLEY, of Pennsylvania,] and it is urged by him as a very wise, just, and philanthropic measure. Yes, he tells us the tax should be removed from matches and proprietary articles, such as medicines and cosmetics. The tax is 1 cent on a box of one hundred matches and 1 cent on a bottle of medicine worth twenty-five cents.

Now, sir, to remove this tax will be a loss to the revenue of about eight million dollars per annum, so immense with this insignificant tax is the quantity consumed each year. But who will be benefited? Mark my word, not the consumer—the masses who buy patent medicines and matches—for, I assert, the cost to the consumer will remain the same, and this little "one cent," instead of benefiting the people, will be absorbed as an additional profit by the manufacturer and dealer. And the same may be said as to the reduction of tax on cigars and cigarettes. But the banks have been clamoring at the door of the Ways and Means Committee room, and as usual they have obtained a hearing and moved the great big heart of the Ways and Means Committee to favorable action. There are to-day about twenty-two hundred national banks with an aggregate capital of \$364,000,000. They have, as shown by the latest official reports, a circulation of about \$320,000,000. This amount of notes is issued, then, charged simply with the cost of issue. These notes the banks under the law are privileged to use as money in their business for the period of twenty years. This use of the \$320,000,000 is a pure gratuity to the banks. Now, for this great privilege of being furnished by the Government with this enormous capital they are required by existing law to pay a pittance tax to the Government of one-twelfth of 1 per cent. per month upon their average circulation of these notes; also one-twenty-fourth of 1 per cent. per month upon their capital beyond the average amount invested in United States bonds.

These banks are permitted under their charters to receive deposits, about 60 per cent. of which they are allowed to use in their business of exchange and discount; and for this privilege they pay a tax of one twenty-fourth of 1 per cent. per month upon the average of said deposits. The banks complain that these taxes are a great hardship, and ask Congress to relieve them from all tax charge under the law except upon their circulation.

Mr. Chairman, I do not hesitate to say, "Oh, shame! where is thy blush?" So high a privilege, a favor so beneficent in opportunity is vouchsafed to no person or class of persons save a national banker, and yet these national banks are whining, begging sycophants at the door of Congress asking to be relieved from the payment of this pittance of tax. These same banks divided among themselves in the last year as net profit over \$60,000,000, and reports show that their average net income, that is, of all the national banks in the United States, was about 10 per cent. upon their aggregate capital. All the taxes paid by national and independent banks combined only amount to about \$13,000,000, while they possess and control aggregate resources amounting to \$2,250,000,000.

Now, I ask, in all reason and justice, why should these taxes be taken off? Has this Congress decided, are gentlemen on this floor prepared to say that the capital of this country shall bear none of the burdens of government? Is it true that capital has become the special pet, the foster-child of the Government; that it is to be favored with all privileges, all prerogatives, all protection, and in turn bear none of its burdens? The answer is potent. Such has been the unvarying tendency of legislation for the last seventeen years, and the act before us is but the consummation of the wrong and the outrage which had its beginning in 1866.

Do gentlemen tell us that we shall raise all needed revenue from the tariff as revised, and that it shall be made equitable and just so that the burden shall rest on all the people alike? I answer all such pretenses are a show and a fraud. The staple articles for which a tariff protection is demanded are iron, cotton, and woolen goods and sugar; and who does not know that all such taxes are at last paid by the consumer, and this not in proportion to his wealth or his ability to pay, but rather in the ratio of his necessity for the use of the article upon which the duty has been imposed? And, sir, the people who travel by rail and the western farmer who by railroad sends his wheat and corn to the Atlantic seaboard market pays in freights and tolls the \$28 per ton duty on steel rails, so that it is clear that a revenue by custom duties falls unequally upon the people and by far the heaviest upon the laboring and the producing classes.

THE PURPOSE OF THE PRESENT BILL.

No man in this House more clearly and thoroughly understands this question in all its bearings than the learned and very astute advocate of a protective tariff from Pennsylvania, the chairman of the

Committee on Ways and Means. And hence his zeal for the abolishment of internal-revenue taxes, for the twofold purpose (1) to make way for his incoming protective-tariff scheme, the great hobby of his life, and (2) the relief of banks and all capital from any and all responsibility in bearing the burdens incident to government, the accomplishment of both being the darling plot, the ideal scheme of consolidated capital.

This bill proposes to relieve bank checks from being stamped. What tax is paid by the people more easily than the stamp tax on checks? Or what tax paid by a class of people more able to pay it? Who demands that this tax be taken off? I have never heard the people complain. It is a well-known fact that bankers are asking it, and why? Because they, instead of their customers, pay about two-thirds of this tax, and well can they afford to do it with a large class of depositors for the privilege of the use and as an encouragement to deposits.

The number of depositors in the various banking institutions of the country amounts to about 8,000,000, and of this number the average deposit of each is about \$350, upon which is raised, by this two-cent stamp duty, about two and a quarter millions of dollars, two-thirds of which, as I have said, is paid by the bankers themselves. The bill proposes \$180,000 reduction of tax on rectifiers and wholesale dealers in whisky, and a slight relief to manufacturers of tobacco. What relief, I inquire of the honorable gentleman in charge of this bill, does this afford to the people? The capitalist who carries a large stock of distilled liquors and the manufacturer of tobacco and cigars may make a little larger profit, but to the consumers of these classes of goods the price will remain the same.

WHO NEED RELIEF.

Mr. Chairman, if there is any one class of persons who really need, I may say who really deserve, relief from the onerous burdens and exactions of our internal-revenue law they are the farmers of the country who grow and produce tobacco. Like the crop of corn and wheat, it is the product of the farm grown by their toil and labor. The law as it now stands prohibits the farmer from making any sale of his crop, under high penalty, to any one except a Government licensed dealer in leaf tobacco or a manufacturer. This bill proposes no material change, except, perhaps, lowers a little the license tax of the dealer and manufacturer, but so far as the farmer is concerned it affords him no relief whatever.

The result of this is, the poor farmer is obliged to haul his crop of three hundred or one thousand pounds, often a long distance, to one of these dealers, and when there he is subjected to the knavery of a man who is protected from all competition which is ever found in an open market, and compelled to take such price as he can get or not sell at all. Now, I ask why it is that gentlemen's philanthropy to, as they profess, relieve the people from some of the burdensome exactions of this law, they have given no thought to the delving, toiling farmer? His little crop of tobacco is the crop of his farm; it is his dependence, in many instances it is his only income. Now, why in all justice and reason may he not sell to whom he pleases in the open market as his neighbor is permitted to sell his corn and wheat?

WHO ARE RESPONSIBLE.

Mr. Chairman, I leave Republicans and Democrats who vote for this bill to answer to their constituents in the tobacco-growing districts of the country. In this bill you afford relief, when no relief is really needed, to the capitalistic dealer and manufacturer, and the dealer in distilled spirits, by reducing his tax, and thereby affording him an opportunity for increased profits, but the poor farmer you hold with tyrannical power under your iron heel of oppression. I characterize this act as I do the motive which has given it being, but another proof of the disposition of the ruling majority to aggrandize capital at the cost and expense of labor; to encourage monopoly to prey upon and enslave industry and production.

Mr. Chairman, I have no doubt, from the sentiment I hear expressed on this floor, that this bill or one of substantially like import will become a law; and now, sir, I am impressed that it will pass, not as a partisan measure, not as the foster-child of the Republican or the Democratic party, but as the pet scheme of the very large ruling majority of the Forty-seventh Congress. And, sir, I declare to this House and the country that from the events of concurrent history for the past seventeen years I believe it to be but the consummation of the grand purpose and scheme of capital and monopolistic wealth of the country, represented in all these years by a large ruling majority in Congress, to, first, render inevitable a postponement of the payment of the public debt; and, second, to release the mammoth and consolidated wealth of the country from bearing any portion of the taxation necessary for either the payment of that debt or any of the current contingent expenses of the Federal Government.

WHO BEAR THE BURDENS.

And, sir, I assert that the abolition of the internal-revenue system, as it existed at the close of the war, was and will be but the veritable accomplishment of this purpose and end. It is the transfer of all the financial burdens of the Government from the shoulders of capital, capitalists, land bonanza kings, to the shoulders of sweating and toiling production and labor. The moneyed financiers and Shylocks so understand it and to this end have they insidiously,

industriously, and earnestly labored, until the acme of their ambition has become an accomplished fact and the victory won.

One word more. We have been repeatedly told during this session "that we must not pay off the bonded debt too fast;" "that we have an overflowing Treasury;" "therefore income should be reduced." And we are further told "that too rapid a payment of the public debt would have a tendency to disturb the financial condition of the country," force banks into liquidation, &c. Now, sir, what does all this mean? I will tell you what it means, at least what I think it means. It means, sir, that it is the fixed purpose of the ruling majority in this House of both parties to so reduce the Government's income as to render it impossible to make more than nominal annual payments on the public debt, and to carry over for the benefit of bankers and capitalists the bulk of the \$475,000,000 of 34 per cent. bonds now due until 1891; and so on until 1907. And then, for want of funds to make payment of the whole debt, perpetuate it still by refunding.

CONCLUSION.

Now, sir, I know this is not what the people want. It is not such treatment as the toiling millions of the country deserve. On the other hand they want the nation's debt paid; and, sir, I predict, understanding their rights, they will demand that it shall be paid, and more than this, that the laws of the nation be so enacted that capital shall bear its fair proportion of all burdens of Federal taxation.

I am no alarmist; I have no part or lot with those who would excite or inflame the passions or prejudices of men; but with an earnest desire to serve my country I ask gentlemen to call a halt, to look well to this legislation and take no action that would tend to unsettle the already feverish relations existing between capital and labor, but rather by wise forethought so legislate as to protect the producer of wealth equally with the holder or consumer, and by just, generous action consolidate these two great agencies. Let us dare to do right, looking only for our reward in the unity, peace, plenty, and prosperity of all our people. No favored class, but a justly dealt with, harmonious whole.

Land Patents in the Virginia Military Land District of Ohio.

REMARKS

OF

HON. JAMES S. ROBINSON,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, August 1, 1882,

In support of House bill No. 6520 in relation to land patents in the Virginia military land district of Ohio.

Mr. ROBINSON said:

Mr. SPEAKER: A residence of thirty-five years in the Virginia military district of Ohio, and familiarity with the title to the bounty lands granted by acts of the Virginia Legislature running from 1778 to 1784, and during that time having often been an eye-witness to acts of hardship and injustice to the hardy pioneer, and with the view of confirming the title to these lands in the possession of these settlers I introduced House bill No. 5123 in the early part of the session. The bill now under consideration is a substitute for that bill.

Under the various laws passed by the Virginia Legislature above referred to, that State provided the following bounties for her officers and soldiers who had or should enlist and serve for a period of three years in the continental line:

	Acres.
To a major-general	15,000
To a brigadier-general	10,000
To a colonel	5,000
To a lieutenant-colonel	4,500
To a major	4,000
To a captain	3,000
To a subaltern	2,000
To a non-commissioned officer	400
To a private	200

The heirs of any officer or soldier who died in the service was entitled to the full bounties.

There are included in what is known as the Virginia military district of Ohio the counties of Adams, Brown, Clermont, Clinton, Highland, Fayette, Madison, and Union, and portions of Scioto, Pike, Ross, Pickaway, Franklin, Delaware, Marion, Hardin, Logan, Clark, Greene, Champaign, Warren, Butler, Hamilton, Montgomery, Miami, and Auglaize, twenty-six counties in all. It will be readily understood how important it is to the people residing in these counties that the question of ownership to these lands should be forever settled. It is one of the most fertile regions of the United States, embracing at least one-half of the productive valleys of the Scioto and Big Miami Rivers, with all of the valley of the Little Miami.

The controversies that have existed for nearly three-quarters of a century over the validity of the titles in this large reservation have done much to retard its growth. Long-continued vexatious litigation, commencing in our State courts and ending in the Supreme Court of the United States, have induced many people to shun this district.

The history of this reservation and the mode of acquiring titles have been thus briefly stated by another: During the revolutionary war the State of Virginia, then claiming to own the northwestern territory, provided by law that her officers and soldiers in the Virginia military line on continental establishment should be entitled to land-warrants to locate lands in compensation for services during the war. A land office was established at Richmond, Virginia, the officers of which, in pursuance of law, issued to the soldiers a vast number of warrants. The office is yet maintained and its records preserved at Richmond. These warrants were assignable, and the holder secured a title as follows:

When the State of Virginia ceded the northwestern territory to the United States a sufficiency of the land between the Little Miami and Scioto Rivers, in the State of Ohio, was reserved to satisfy these warrants. As the warrants could be located also on lands in Kentucky, an office was established without authority of law by a surveyor named Anderson, and known as "Anderson's office," in which entries were made and surveys recorded. This was by law subsequently recognized, transferred to, and established at Chillicothe, Ohio, where it has ever since remained.

The mode adopted of perfecting a title was for the holder of a warrant, or his agent, to make an entry in the proper book of entries in the office of the principal surveyor of the Virginia military district, at Chillicothe. Subsequently, at such time as the owner of the entry chose, he procured a survey to be made by said principal surveyor or his deputy, and to be returned to and recorded in the proper book of surveys in said office at Chillicothe. Subsequently, when the owner of the survey might deem proper, he filed the original warrant or a certified copy and the survey with the Commissioner of the General Land Office, when a patent issued.

Entries were sometimes made and many years would elapse before surveys were made, and in some cases very many years would still further elapse before the warrant and survey would be returned to the General Land Office to procure a patent.

As soon as the lands were entered they became taxable in Ohio, and were sold without regard to the issuing of a patent; judicial sales were made, they were sold by order of probate courts, sold for taxes, &c.

The supreme court of Ohio held that the statute of limitations did not run in favor of a party in possession of these lands until a patent was issued, and many years after the owner of an entry and survey had sold it, and especially when the evidence of the sale had been lost, some person claiming to be heir, or some lawyer fishing for old claims, would, in some cases, get out a patent to the heirs of deceased locators of surveys, and bring ejectment suits to turn out parties who had been long in possession. This was regarded as a great evil, and Congress consequently limited the time within which warrants and surveys were to be returned to the General Land Office to procure patents.

The act of March 3, 1853, was the last act until that of 1880 to authorize the return of warrants and surveys and the issue of patents. The act of 1853 "allowed a further time of two years to make and return surveys to the General Land Office." Its title declared that it was "an act allowing the further time of two years to those holding lands by entries in the Virginia military district of Ohio made prior to January 1, 1852, to have the same surveyed and patented." The effect of this act was that if surveys were not returned to the General Land Office by March 3, 1857, no patent could issue for lands even if the survey was afterwards returned, and the land reverted to and became the property of the United States, to be disposed of for the benefit of all the States. Some patents were issued, however, on surveys returned after that time; but on the 3d of April, 1880, the Commissioner of the General Land Office decided that there was no authority to issue patents unless the surveys and warrants were returned prior to March 3, 1857.

This decision, if not reversed by the Secretary of the Interior or the Supreme Court of the United States, will protect the present occupants in the possession of their homesteads. The passage of this act is urged in the interest of those who have owned, occupied, and improved their lands, unconscious that a defect in their title existed. The passage of this bill is most valuable and important to the people of the Virginia military district. A portion of the city of Columbus, the capital of my State, is built upon lands that have never been carried into patent by reason of the fact that the warrants were not returned to the General Land Office prior to the expiration of the provisions of the act of 1853. From the best information obtainable it is estimated that there are within the limits of the reservation 130,000 acres of land for which no patent has been issued. The value of this vast acreage in its present state of improvement and cultivation is fully equal to a thousand million dollars, or a sum equal to one-half our present national debt. I venture to say that these lands are to-day occupied by not less than two thousand families.

The lands in some cases have been covered by an entry; in others by entry and survey; and in most cases, it is presumed, the warrants have never been returned to the General Land Office; so that under the decision of that office, and as the law stood prior to the act of May 27, 1880, no patents can issue. If this decision can stand, and if its effect cannot be defeated under this last-mentioned act, it will be of great service to the owners of the 2,000 farms I have mentioned. Many of these, probably most of them, have been occupied for a period of from twenty-one to seventy-five years. In the early history of the State land-warrants were sold and passed from hand to hand at twenty-five cents an acre, as the warrants issued to the soldiers of the war of 1812 and the Mexican war were sold in open market; and men bought lands without looking to see if patents had been issued, and took written contracts of purchase and made payment in the course of years, but often died without obtaining deeds of conveyance. When deeds were made they were frequently not recorded. Judicial sales were made, but records have been lost or destroyed; tax sales were made, often imperfect, but parties bought and sold the lands through long periods of time. Men generally sup-

pose that if they find land has been occupied twenty-one years this gives a good title, and they buy on the faith of this without looking further. In all justice and by every rule of morality and public policy men who have claims to lands should assert them within twenty-one years, or forever leave in repose and security undisturbed those who have in good faith occupied them during that length of time in the honest belief that they had a good title.

To allow patents to be issued at this late day upon fraudulent proofs would unsettle titles and cause endless confusion and great loss to the innocent holders of these lands.

There is no reason why protection should not be given as well to parties in possession for twenty-one years under an entry and survey as in cases where patents have issued. The entry and survey vest in the party in whose favor they are made the full, perfect, equitable title. After they are made the United States holds the title as a mere trustee, with no beneficial interest in the lands. But the Supreme Court having decided that the statute of limitations does not begin to run until the patent issues, it consequently gives no protection to a possession for twenty-one years, nor forty, nor seventy-five years before it issues. Hence, it is of the utmost importance to parties in possession of these unpatented lands that no patent should issue to disturb them; and because of the injustice of allowing parties having made entries and surveys to obtain patents and turn out honest owners of lands occupied for a long period of time, Congress, by the act of March 3, 1853, provided in effect that all surveys should be returned to the General Land Office within two years, or no patent could issue thereon. Repeated efforts were made in Congress to give further time to return surveys, but it was always refused up to the act of May 27, 1880.

The necessity of approving the decision of the Commissioner of the Land Office by an act of Congress is apparent, in order to discourage lawyers from bringing suits on old claims in the hope of harassing occupants with years of expensive and ruinous litigation, with the view of effecting compromises. A half dozen suits of this character were recently compromised in Marion County, Ohio, one of the counties in my district, at a heavy cost to occupants, who had long lived in fancied security under warranty deeds from the late W. L. Sullivan, a former wealthy resident of Columbus, Ohio. All compromises of this character result in additional lawsuits. These suits are profitable to the lawyers, but very annoying to the unfortunate defendant.

I conclude with the statement that in my opinion this bill ought to pass. It is an act of justice to the parties in possession of these lands. Every civilized country has passed statutes of limitation as to title to real estate, indispensable to the security and repose of the people. Is it not time, after a lapse of seventy-five years, that this security should come to the people of the Virginia military land district?

Civil-Service Reform in the Forty-Seventh Congress, and Statesmen selected "by lot."

SPEECH

OF

HON. JOHN D. WHITE,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 7, 1882.

The Committee of the Whole on the state of the Union having under consideration the sundry civil appropriation bill—

Mr. WHITE said:

Mr. CHAIRMAN: It will be utterly impossible in the brief time allowed me to say what I had intended in reply to the gentleman from Pennsylvania [Mr. BAYNE] and my colleague [Mr. WILLIS] on the subject of civil-service reform; and I ask permission to incorporate in my remarks what I have not time to say on that subject. The gentleman from Pennsylvania [Mr. BAYNE] was pleased to refer yesterday to a conversation stated to have occurred between a Senator and a Cabinet officer. I quote his remarks, as follows:

"Well, how about the Buckner case?"

The Senator did not recall the Buckner case at once, having been absent from town when it was brought up. This was the case fully detailed in the Tribune, where Mr. Wilson, as internal-revenue collector, holding the highest grade in the service, was removed after being two years in office, to make room for a Grant man.

It is very unfortunate, Mr. Chairman, (and I regret it as much as any one,) that my friend from Pennsylvania should have alluded to a case about which he seems to have known so little.

If the gentleman had taken the pains which I have taken to examine the records of those two gentlemen, (Wilson and Buckner,) he would have found that the New York Tribune's article is simply a slander on the Administration. There were good and sufficient reasons for the removal of Mr. Wilson and for the appointment of

Captain Lewis Buckner, who was a gallant soldier and had served for years under his father, the former collector, and whose record as an officer stands second to none in this country.

But Mr. Wilson was totally unfit for so important a post, requiring rare executive ability. Doubtless the fault was not his, but congenital. No President of the United States looking to the good of the country alone would ever have made such a puerile appointment. I could name some of the bad influences which brought about his appointment, but do not care to discuss that now.

But, sir, this is not all. I would remind the gentleman from Pennsylvania that almost every one nominated by the President for appointment in Kentucky, and confirmed without delay by the Senate, has been either a woman or an inactive Republican who found influence outside of Kentucky, but who is considered as very little better, if any, than Bourbon Democrats by the rank and file of the Republican party throughout the State of Kentucky. I am sure that the independent Republicans of Pennsylvania could not have recommended more harmless appointments, and I am equally certain that the independent Democrats of Kentucky have no fault to find with them. But, sir, the very moment that the President sends in the name of a competent person who is not identified with sore-headed Republicans or recommended by Democrats he is met by the bitterest opposition from civil-service reformers, so called, both within and without the State.

My friend from Pennsylvania [Mr. BAYNE] seems to have a perfect dread of bosses, afraid that his party will have "subsidiary bosses and organs," and that these bosses, subsidiary bosses and organs, will proceed with method to nominate candidates, and that "they will tolerate no insubordination," going even to the extremity of "cashingier deserters." He sees in the President of the United States a great political machine boss who has no love for his country and is not even actuated by a desire to preserve the ascendancy of the Republican party. He says:

President Arthur has violated his promises and set at naught the principles of the Republican party. He has removed many faithful and competent officers without cause and while in commission, thus not only violating his promise, but, as I believe, the Constitution and laws as well.

Has the gentleman forgotten that the Constitution of the United States, article 2, section 2, declares that the President "shall nominate and, by and with the advice and consent of the Senate, shall appoint ambassadors, other public ministers, and consuls, judges of the Supreme Court, and all other officers of the United States whose appointments are not herein otherwise provided for and which shall be established by law?"

The gentleman from Pennsylvania, [Mr. BAYNE,] for some cause, seems not to like the President. It is not clear to my mind, after a careful study of his speech, that he would be willing to trust any President of the United States to perform the duties imposed upon him by the Constitution of the United States, for he says:

A mere caprice may actuate him to remove one, ten, or a thousand, and to appoint others in their places. Party zeal, personal pique, factional spirit, selfish ambition, the frenzy of intoxication, or the madness of passion, any motive may influence him to sweep out the entire civil list, with the exceptions I have named, and to appoint any persons he may choose to fill it up again.

Mr. Chairman, what is there to justify this morbid, unreasonable, and frenzied attack on the institutions of our country, on the Constitution and laws of the land, and on the President of the United States, legally elected, lawfully installed, and possessing the confidence and sympathy of the American people in the discharge of the most delicate and onerous duties ever imposed on any citizen of our great and growing country? After the facts and figures given a few moments ago by the gentleman from Ohio [Mr. BUTTERWORTH] the country will wait anxiously for the proof of the charges made by the gentleman from Pennsylvania [Mr. BAYNE] against the President in regard to the bloodthirstiness with which he has made removals from office and the reckless abandonment with which he has appointed incompetent men to fill the vacancies thus created. Think of it! Only five removals in the great State of Pennsylvania, and three of them made for cause. What a spectacle the independent movement in Pennsylvania presents if this be all that can be shown of its foundation principles! And for this amazing offense, Mr. Chairman, a member of the legislative branch of the Government has seen fit to rise in his place on this floor and arraign the Executive of this nation. I quote his exact language, as follows:

Mr. BAYNE. Who will say that these changes of internal-revenue collectors, and the numerous changes of postmasters, marshals, &c., are made with a view to improving the service? It will be noted that promotions are rarely made. The appointees as a rule are new and untried men. There must be a motive for making these changes, for even Mr. Arthur would hesitate, in view of his declarations and the protest of the masses of the people, if he were not impelled by some motive which imparts a considerable degree of hardness. There is a motive, and that motive is to establish and maintain a political machine. This administration very soon after its accession began to make appointments on a well-defined prescription for political opinions, and the wayfaring man cannot help but see that the object is to trench itself and its factional following in the official positions of the Government with a view to perpetuating its ascendancy and control. It is not the success of the Republican party that is sought, but the resurrection of a minority of that party by the systematic dispensation of patronage.

In a word, the Executive and those from whom he takes advice have undertaken the peculiar task of stalwartizing the Republican party, and that too when the very name of stalwart has become a reproach. The stalwarts compose not only a minority of the party but a very small minority. There is not a corporal's guard of stalwarts in any of the Western States except Illinois. In Ohio, Indiana, Michigan, Iowa, Minnesota, Kansas, and Nebraska there are no stalwarts

worth mentioning. Enough cannot be found to fill the offices. If there be I should be glad to have it stated by any of the Representatives from those States. Illinois has a few, but the independent Republicans outnumber the stalwarts ten to one, I am told, in that State. If I am in error, I would be glad to be corrected by any of the Representatives from that State.

Mr. THOMAS. The gentleman is mistaken as to that.

Mr. BAYNE. I may be. I am not so fully advised as to California, Oregon, Nevada, and Colorado, but I doubt not the stalwarts could be easily enumerated in those States.

Mr. STEELE. In Indiana we are neither independents nor stalwarts, as you are in Pennsylvania, but all Republicans.

I thank the gentleman from Indiana [Mr. STEELE] for having made so pertinent a reply. The gentleman from Pennsylvania [Mr. BAYNE] has made grave charges. They do not seem to be warranted by the facts. I do not believe they will meet with general credence.

"STALWARTS" IN 1880.

He talked about the machine of the "stalwarts." He tried to make it appear that the President of the United States was the head of a great political machine and had agents all over the country, and that he was trying to do this country some harm. What does the gentleman mean by the word "stalwart?" The first time I remember to have heard that word in connection with the politics of this country was by a bolter and a deserter from the ranks in the Chicago convention in 1880, where I was, as chairman of the Kentucky delegation, endeavoring to carry out the instructions given me, not only by that delegation but by the State convention of Kentucky, which had in the most formal manner instructed its delegates to act as a unit in the national convention in support of General Grant's nomination for the Presidency. There were four of those bolters, and they gloried, at that time, in the distinguishing title of "stalwarts." One of those "stalwarts" voted thirty-six times for Hon. James G. Blaine, and will be remembered as the author of the late famous letter in the Democratic Washington Post defaming General Garfield. The other three of the "Kentucky Big Four," as those bolters were called by the press at that time, likewise voted thirty-six times in utter disregard of the instructions they had accepted from the regularly constituted State convention of Kentucky.

For the benefit of the curious, and especially the gentleman from Pennsylvania, I read from the proceedings of the national convention, Chicago, 1880, page 32, of the volume supervised by Charles W. Clisbee, reading secretary of that convention, which shows that the word "stalwart" had then a different signification from that attached to it on yesterday by the gentleman, [Mr. BAYNE.] It is as follows:

On the call of the State of Kentucky:

Mr. WHITE, of Kentucky. Under instructions from the convention of the State of Kentucky, Kentucky casts 24 votes ay.

Mr. HAMILTON, of Kentucky. I protest against the vote given by the chairman of the delegation. There are four members of the delegation who desire to vote "no."

Mr. WHITE, of Kentucky. I wish to state—

Mr. HAMILTON, of Kentucky. You cannot deprive us of our votes.

Mr. HUBBARD, of Kentucky. Mr. President—

The PRESIDENT. The gentleman from Kentucky is out of order. Does the gentleman from Kentucky desire that his vote may be changed from the affirmative to the negative?

Mr. HUBBARD, of Kentucky. He does, sir—four of us. There are four "stalwarts" from Kentucky.

The PRESIDENT. The vote of the gentleman from Kentucky will be recorded in the negative.

Mr. HAMILTON. Mr. President—

Mr. HUBBARD. I have the floor.

The PRESIDENT. The gentleman from Kentucky has not the floor for any purpose except to declare his vote. If any other gentleman from Kentucky desires to claim the same privilege he will be recognized.

Mr. HAMILTON. Mr. President—

The PRESIDENT. The gentleman from Kentucky is out of order. No business is now in order except the calling of the roll. Any other questions may be settled by the convention as it pleases when the roll-call is over.

Mr. CONKLING. That is right.

The PRESIDENT. The Chair will permit no delegate to interrupt the roll-call, except when an individual delegate rises and claims that his vote has been improperly reported by the chairman of his delegation, and it will be recorded by the secretary. Does any other delegate from Kentucky rise for that purpose?

Mr. WHITE, of Kentucky. Kentucky votes—20 yea, 4 nay.

The PRESIDENT. The chairman of the Kentucky delegation now announces that there are four dissenting voters. They will be so recorded.

THE KENTUCKY BIG FOUR.

Those four gentlemen violated the instructions of a regular State convention. The Republican party of Kentucky had held its county meetings, sent its delegates to the State convention, and in that State convention passed a resolution that the Kentucky delegation should vote as a unit. But at Chicago four of that delegation rose up, formed a group, and embracing each other, proclaimed through their spokesman that they were "stalwarts." I will say to the gentleman from Pennsylvania [Mr. BAYNE] that if by the term "stalwart" he means a bolter, then I hope for the honor and dignity of our American form of government that this is not a "stalwart" administration.

MAJORITY RULE.

This much is certain, in this country the will of the majority must govern; and it is no less true of every political party that the will of the majority, as expressed in its county and State conventions, must prevail. Their meetings are free to everybody of the accepted faith, and all should feel and manifest a personal interest in conducting them properly. If the general public are too busy, or too indifferent, or too ignorant, to attend to the political duties devolving

upon them as a part of their heritage of American citizenship, it is exceedingly disingenuous in them to wrap the robe of virtue about them, keeping themselves "unspotted from the world," and to snivel at the management of public affairs for the defects of which, if any, they themselves are largely to blame, by reason of their failure to perform their full political duties.

Everybody is agreed about the general principles which should regulate the civil service of our country. All parties contend that the public offices should be filled by proper appointments, and that all appointees should be honest, capable, and faithful.

The trouble arises in the application of these principles to individual cases, where invidious comparisons are so frequently made. This is a free country, where there is no distinction between citizens recognized by law, and it is hard for the average office-seeker to realize that one citizen is not just as good as another, and in his individual case a little better.

LAUDABLE AMBITION.

Every one has a perfect right to put whatever estimate he chooses upon his own honesty, capacity, fidelity, and fitness for any duty or any position to which he may aspire in either private or public life. Progressive ideas are instilled into the minds of the youth of the land, and they are inspired with bright hopes of the future greatness of the Republic, when old fogies shall retire and superior talent shall control affairs. They naturally look forward to the time when they shall become "mighty men" and "men of renown." From infancy the youth is inspired with ambition, taught self-reliance, and he naturally becomes self-confident and aspires to be somebody and to do something worthy of the commendation of the best men and women of his acquaintance. He has a good opinion of himself, appreciates the esteem of his fellows, and in various ways seeks recognition and opportunity to give evidence of his worth. It rests with the people alone to decide his fitness.

BE SUBJECT UNTO "THE POWERS THAT BE."

I have never heard of any competitive examination being had prior to the nomination or the election of a constable or a magistrate whom the people saw fit to elect for either of those offices. There is no power "under heaven nor among men" that can prevent his being magistrate or constable so long as he is the officer elected by the people. If he is a bad officer it is the fault of the people themselves, and for all the blunders, either inadvertent or premeditated, which he may make, his constituency must assume the responsibility. If he be a gambler or a drunkard or ignorant or neglectful or discourteous or dishonest or in the least unfaithful or incompetent it is within the power of his constituents to supplant him with a better man at the next election. If the country is at the present time afflicted by any of these evils it is the fault of the people and not of the law.

Dishonesty can be dealt with by ceasing to trust the dishonest person. Negligence and incompetency and immorality can be dealt with as summarily.

EVILS REQUIRING HEROIC TREATMENT.

If the representatives of the American people have neither the wisdom nor the courage to devise a way and provide the means for regulating the manufacture and sale of all intoxicating liquors, and protecting their constituents from the degrading and destructive effects of alcoholism, it is a calamity for which their constituents are responsible. If this Congress fails to give aid to the common schools to educate the millions of illiterates within our country and thereby dispel the cloud of ignorance which surrounds the ballot-box, it rests with the people to say when, if ever, such unfortunates shall be helped to exercise aright the elective franchise.

If the fruits of labor shall ever be equitably adjusted among all classes and the wrongs of women ever righted it will not be by the flipping of a nickel or a dime, but by the voice of a majority of the legal votes cast throughout the Union. If ever the hundred thousand offices of our National Government shall all be filled with honest, faithful, and capable public officers it will be when the right of every part of our country to equal representation is duly considered and recognized in making appointments, when the principle adopted March 3, 1875, for the Treasury Department shall be applied to every branch of the Government. That law is as follows:

That the duties heretofore prescribed by law and performed by the chief clerks in the several bureaus named shall hereafter devolve upon and be performed by the several deputy comptrollers, deputy auditors, deputy register, and deputy commissioner herein named: *Provided*, That on and after January 1, 1876, the appointments of this Department shall be so arranged as to be equally distributed between the several States of the United States, Territories, and the District of Columbia according to population. Approved March 3, 1875.—*Statutes at Large*, volume 18, pages 398 and 399.

In accordance with section 2 of article 14 of the Constitution of the United States "Representatives are apportioned among the several States according to their respective numbers," and I would have all appointments to the civil service of the National Government apportioned in the same way. Then we should have what was intended by the fathers of the Republic—"a Government of the people, for the people, and by the people." It would be difficult to improve upon the tests prescribed by the President in his first message to Congress, as follows:

There are very many characteristics which go to make a model civil servant. Prominent among them are probity, industry, good sense, good habits, good ten-

per, patience, order, courtesy, tact, self-reliance, manly deference to superior officers, and manly consideration for inferiors. The absence of these traits is not supplied by wide knowledge of books or by promptitude in answering questions, or by any other quality likely to be brought to light by competitive examination. To make success in such a contest, therefore, an indispensable condition of public employment would very likely result in a practical exclusion of the older applicants, even though they might possess qualifications far superior to their younger and more brilliant competitors. These suggestions must not be regarded as evincing any spirit of opposition to the competitive plan, which has been to some extent successfully employed already, and which may hereafter vindicate the claims of its most earnest supporters; but it ought to be seriously considered whether the application of the same educational standard to persons of mature years, to young men fresh from school and college, would not be likely to exalt mere intellectual proficiency above other qualities of equal or greater importance. Another feature of the proposed system is the selection by promotion of all officers of the Government above the lowest grade, except such as would fairly be regarded as exponents of the policy of the Executive and the principles of the dominant party, to afford encouragement to faithful public servants by exciting in their minds the hope of promotion, if they are found to merit it, is much to be desired; but would it be wise to adopt a rule so rigid as to permit no other mode supplying the intermediate walks of the servants?

There are many persons who fill subordinate positions with great credit, but lack those qualities which are requisite for higher posts of duty, and besides the modes of thought and action of one whose service in a governmental bureau has been long continued are often so cramped by routine procedure as almost to disqualify him from instituting changes required by the public interests and infusion of new blood from time to time into the middle ranks of the service might be very beneficial in its results.

The subject under discussion is one of grave importance. The evils which are complained of cannot be eradicated at once. The work must be gradual. The present English system is a growth of years and was not created by a single stroke of executive or legislative action. Its beginnings are found in an order in council promulgated in 1855, and it was after patient and cautious scrutiny of its workings that fifteen years later it took its present shape.

Five years after the issuance of the order in council, and at a time when resort had been had to competitive examinations as an experiment much more extensively than has yet been the case in this country, a select committee of the House of Commons made a report to that House, which, declaring its approval of the competitive method, deprecated, nevertheless, any precipitancy in its general adoption as likely to endanger its ultimate success.

During the tentative period the result of the two methods of pass examination and competitive examination was closely watched and compared. It may be that before we confine ourselves upon this important question within the stringent bounds of statutory enactment, we may profitably await the result of further inquiry and experiment.

The submission of a portion of the nominations to a central board of examiners, selected solely for testing the qualifications of applicants, may perhaps, without resort to competitive test, put an end to the mischief which attends the present system of appointment, and it may be feasible to vest in such a board a wide discretion to ascertain the characteristics and attainments of candidates in these particulars which I have already referred to as being no less important than mere intellectual attainment.

If Congress should deem it advisable at the present session to establish competitive tests for admission to the service, no doubts, such as have been suggested, shall deter me from giving the measure my earnest support; and I urgently recommend, should there be a failure to pass any other act upon this subject, that an appropriation of \$25,000 a year may be made for the enforcement of section 1753 of the Revised Statutes. With the aid thus afforded me I shall strive to execute the provisions of that law according to its letter and spirit.

I am unwilling, in justice to the present civil servants of the Government, to dismiss this subject without declaring my dissent from the severe and almost indiscriminate censure with which they have been recently assailed. That they are as a class indolent, inefficient, and corrupt is a statement which has been often made and widely credited, but when the extent, variety, delicacy and importance of their duties are considered, the great majority of the employees of the Government are, in my judgment, deserving of high commendation.

HON. ALBERT S. WILLIS.

Now, Mr. Chairman, in regard to my colleague from the fifth district, [Mr. WILLIS,] I was surprised that he should appear here as the champion of civil-service reform. I invite his attention, if he is on the floor, to a statement in the *Courier-Journal* of the 29th of September, 1880, which is pertinent to this question of civil-service reform.

Mr. TOWNSHEND, of Illinois. Is the gentleman from Kentucky aware that his colleague [Mr. WILLIS] is not here?

Mr. WHITE. I do not know that he is not here. He usually is here, and I regret his absence, as this is my only chance, and that through the kindness of the gentleman from Pennsylvania, [Mr. MILLER,] to get the floor before general debate closes. I shall not go outside of the record. I read from the *Courier-Journal*, the leading Democratic paper in my State, and, I may say, in the Southwest, and published in the district of my colleague, [Mr. WILLIS,] It is as follows:

To the people:

The result of the contest between Messrs. Hoke and WILLIS is simply a public scandal. The struggle which preceded it was sufficiently disagreeable; but the finality is disgraceful. Judge Hoke has paid the penalty of his folly by his bad luck. Mr. WILLIS has nothing left him but to pay the penalty of his by promptly retiring from the field. Under no circumstances can he longer represent this district in Congress. No self-respecting Democrat can vote for him; and no self-respecting Democrat will.

There is nothing left Major Castleman but to call a convention to nominate a Democratic candidate whom the people may support without dishonor. It is not necessary to make an argument on this point, because there can be no two opinions about it.

Judge Hoke is off, and Mr. WILLIS, by his own act, has disqualified himself. The Democratic party owes it to itself to resent the assumption of these two audacious persons. If it fails to do so the people will.

Let the proper authorities at once call a convention, and let the convention give us a nominee whom we can vote for without a sacrifice either of our dignity or our honor.

I hope my time may be extended till I finish this line of argument. Mr. REED. I hope the time of the gentleman will be extended. As the Chair knows, there was a misunderstanding.

The CHAIRMAN. If the gentleman from Pennsylvania [Mr. MILLER] does not claim the time—

Mr. WHITE. He does not claim the floor. He yields his entire time to me.

The CHAIRMAN. The gentleman from Kentucky may proceed.

"BY LOT" AGAINST PRIMARIES AND "LOCAL COMMITTEES."

Mr. WHITE. Sir, what was the cause of this severe criticism on my colleague? And I allude to this matter of history in our State because my colleague [Mr. WILLIS] has appeared here as the champion of civil-service reform, and has by his sweeping attack on party organization invited debate. We all believe in civil-service reform. But as some one has well said, much depends on what is meant by the term "civil-service reform."

My colleague [Mr. WILLIS] says that our present system is "false," "inefficient," and "unrepublican," and that "streams of political corruption flow from the fountain-head," and, rising on tiptoe, cries aloud:

Civil-service reform is the great demand of the hour.

He tells us:

It is an issue of public virtue, an issue of peace and fraternity, an issue that rises far above party politics, as it involves the welfare and concerns the honor of our whole people. Upon that issue the public judgment is already made up. In every forum of opinion our civil service has been denounced as a national disgrace and a national danger. The press has spoken out boldly, patriotically, and sympathetically upon the subject.

Again he says:

Think of it, ponder it, my countrymen! Here is a question of the gravest and greatest importance, a question which comes home to the bosoms and business, which touches the interests of all our people, a question which has challenged the ripest scholarship and the profoundest statesmanship of England and of the world, a question now of the most vital and pressing concern in our own country, and which for successive years has been urged upon the American Congress—purification of the civil service—reform, reform inside and outside, reform from the highest to the lowest, reform at home and abroad, reform in the Chief Executive, reform in all the offices, reform in all the branches and departments and dependencies of the Government, judicial, legislative, executive, and ministerial; reform, not partial, not temporary, not incomplete and spasmodic, but full, ample, sincere, thorough, and immediate reform throughout all the length and breadth of our land. [Applause.] This is the great, the inexorable demand of the hour. This problem, affecting the destinies for good or evil of the American Republic, with its fifty million people, this issue so grand, so solemn, so tremendous, so full of inspiration, was submitted in this Congress to the Select Committee on Reform in the Civil Service.

Look on that picture and then look on this, as drawn by the organ of the independent, sore-headed clique of the Louisville Commercial, which is published at the home of my colleague, [Mr. WILLIS,] I read from the Louisville Commercial of September 27, 1880, as follows:

SETTLED—MR. WILLIS AND JUDGE HOKE BELIEVE THE DEMOCRACY OF A TROUBLESOME MATTER WITH THE AID OF A COIN—HEADS AND TAILS AS CONGRESSIONAL ASPIRANTS—TAILS TRIUMPH.

It has been stated heretofore that the Democratic mind just now was in a terrible state of excitement over the question as to who should run for Congress in this district.

Yesterday the members of the Congressional committee were nearly all consulted, and it was generally understood that the majority of them were in favor of having only one candidate.

Knowing that a convention, or some other agent, would be brought to bear, Mr. WILLIS called on Judge Hoke yesterday afternoon, at four o'clock, for the purpose of ascertaining whether the candidates might not fix up the matter without the expense or intervention of a convention.

The affable judge was willing to adopt any honorable and dignified method of settlement, and the valuable medium of two nickels and the ancient game of "heads you win and tails you lose" was proposed and immediately agreed upon.

It was a rare sight. There were two gentlemen, representing all the dignity and intelligence of the great Democratic party in this district, getting down to chuck-a-luck in order to show their disinterested devotion to that party.

The Commercial man did not see the game, but he was told that the grave judge placed his ambition on the head of the coin, while the astute Congressman murmured "tails" with suppressed breath, as he watched the tossing.

The coin was thrown into the air and as it descended on the table the scene may be better imagined than described. The shield was next to the table and the reverse side shone only for WILLIS.

The Democracy will now subside and the canvass proceed.

And then, on September 29, 1880, this same Louisville Commercial proceeds to comment on the conduct of the independent Democratic civil-service reformer of the fifth Kentucky district, my colleague, [Mr. WILLIS,] as follows:

OUR NICKEL STATESMAN—"TALL ACHES FROM LITTLE TOE-CORNS GROW."

Colonel Robert Baird has in his memory the information for a most entertaining lecture, showing how many times a single vote has had the most important influence on the destiny of this country.

In the early classical studies we learn that one philosopher was choked by a hair in a glass of milk; another by a grape-stone.

Within this week a single turn of a nickel has been allowed to decide a matter of national moment, whose far-reaching consequences no foresight can now reveal. This fateful nickel choked an ambitious political career to death in a cool, matter-of-fact way. True it was to the unfeeling world only a Democratic career, but that Democrat was human, had relatives and friends, and but a moment before the ill-omened nickel did its work he was basking in the genial glow of great expectations.

In the purely personal aspect, Messrs. Hoke and WILLIS could stake their fortunes or characters or political ambitions on their luck in matching nickels and have only their own sober second thought to reckon with in judging the prudence, the wisdom, the far-seeing common sense of staking their all on the turn of a coin. But from the public stand-point there are some considerations that seem not to have entered into the thoughts of these two gentlemen, who were just before offering themselves as representatives of a great district in some most important public matters. No thinking man would intrust any serious business to the sense, wisdom, or prudence of a lawyer who would stake \$10,000 (the salary of a term in Congress) upon the chance of his matching a nickel laid down by another man.

If a young man well launched in pursuit of an honorable ambition, garnering

diligently the golden sheaves of the esteem, respect, and confidence of his thousands of fellow-citizens, in the midst of a prosperous harvest of honors suddenly stops and risks every hope and noble aspiration upon the turning of a coin, upon a single chance of odd or even, he can not help losing the confidence of his constituency, for it is inexcusable folly to stake such things on a gambler's chance.

When one who has reached the prime of life, the age of sound manhood, who is developed and mature and past the time for the great risk that the days of youth may sooner take, who seeks a new honor in the noon of life to round out the tokens won in young manhood, who moves about among his neighbor men a man among men, a power in the State, asking the great trust of a law-maker for a great nation, stops short in his career and stakes his ambition and prospects upon a single throw of the dice of chance, public opinion will say that in losing the throw he lost less than in consenting to make it. When Messrs. WILLIS and Hoke staked their hopes and ambitions and \$10,000 salary on the turn of a nickel, they did a thing which no person with wisdom enough for a law-maker would consent to do. It was unwise, reckless, and frivolous. It would condemn them if they took such risks with what was their own money, their own hopes and prospects. But they were gambling for the wages of officers of the nation; they were staking upon the turn of a nickel the sacred trust of helping make laws for fifty million human beings.

Neither of them has any learning, any wisdom, any judgment, any idea which gave him a right to ask to be a law-maker, or was of value to his fellow-men, of importance to his country, or to this district, with its tens of thousands of people and great commercial interests, in staking what he did upon the turn of a coin he gambled with what was his constituents' property, not his. He staked perhaps the welfare of a nation, the hopes of humanity, the honor of his people, on a gambler's chance. A lawyer staking his client's fortune at faro, a priest staking a cathedral at dice, a banker staking the deposits trusted to him, are not more blamable. It matters not that these are not great men; they were seeking a great post, and smaller men have done great good or evil in great places. These men have by their conduct shown that they regard a great public trust as their personal property or plaything, to be gambled for, or bought, or sold like any other of their chattels, for they cannot comprehend, or, comprehending, have no respect for the dignity, honor, and high trust they ask at their people's hands.

Mr. Chairman, the above quotation is from a paper which arrogates to itself as much of virtue, independence, decency, and wisdom as the most ultra civil-service reformer on this floor; a paper which has reduced the science of office-seeking and office-holding to a fine point, and one of whose editors has contrived to hold on to an important Federal office from the stormy days of Andrew Johnson until the dead calm of the present hour; and I think it is safe to say that he would have held over with the greatest equanimity of temper had Hancock been elected President, or at least been willing to have tossed a nickel for it. I state these facts to show that a civil-service reformer is the author of the comments which I have quoted. But lest I should do my colleague [Mr. WILLIS] some injustice I submit his own letter and interview published with it in the Louisville Courier-Journal of September 30, as follows:

Major JOHN B. CASTLEMAN, Chairman, etc.:

DEAR SIR: We respectfully request that you convene the members of the city legislative committee to meet on Tuesday, October 5, 1880, to take such action as they may think necessary in the interest of the Democratic party of this district.

LOUISVILLE, September 26.

ALBERT S. WILLIS.

"My purpose in drawing up this note," continued Mr. WILLIS, "has already been announced and fully explained. I had signed it and proposed to get Judge Hoke to do so, and then the signature of all my friends on the committee. This either would have induced Major Castleman to call the committee together or would have shown the status of the committee, and I believe the result would have justified my declaration that I was always willing to carry out the agreement before the committee and that I had no motive to withdraw from it, because the majority of the committee was in my favor.

"I was absent from the city last Saturday, and on my return received a message from Judge Hoke that he would assent to the arrangement proposed in my note. With the view of obtaining this assent, I called Monday morning at the court room and made an engagement to meet him at his office at 11.30 a. m. We met at that hour in a private room and I told him what I came for. He remarked that had I met him Sunday he would have promptly united with me, but he now believed that he was tired of the committee and its action and presumed I was too. I told him I was, but hoped he would consent to make another effort amicable to adjust our canvass.

"He referred to the fact that our friends were mutual. We then discussed the present outlook for both in a perfectly frank and friendly manner, but were of the opinion that there was a strong probability at that time that a convention would be called, though neither desired it; that parties unfriendly to both were trying to create an impression that there was a muddle in the district; that there was bitter feeling between us, and that on this as a basis both be set aside. We fully agreed that a convention or primary election would create bitter dissensions in Democratic ranks, and aside from this fact that as ordinarily conducted they were a blur and a disgrace upon every party and should always be avoided unless a strong party necessity demand it. Both agreed that it was desirable to unite and harmonize the party and were both ready to sacrifice our individual ambition for that purpose.

"After considerable conversation to this effect Judge Hoke proposed to settle it by lot. He remarked: 'You think you have a majority of the people, and I think I have. Let us assume that we are equal before the people, and decide this controversy by lot.' To this I agreed, and we met at his office in the afternoon and the decision was made as agreed.

"Judge Hoke then wrote his card of withdrawal, which I never saw until it was in print. At the time the proposition of deciding by lot was made we discussed the propriety of that mode of settlement. Judge Hoke remarked that he considered it as good as any mode; that no matter how it was settled, somebody would complain. He called my attention to the fact that the statutes of Kentucky expressly provided for a settlement of this kind where parties received the same number of votes for an office.

"The words of the statute are that in such cases the right to the office shall be decided by lot. He referred to several cases which had come before him where the decision had been made in this way. The case presented by the statute is much stronger than the one between Judge Hoke and myself, because in that people have absolutely become a party to the contest by their votes, but in this case no votes have yet been cast. I have been all over the city to-day and among representative men of all classes and conditions. I find an almost unanimous sentiment in favor of this action of ours. Relieving the district as it does as far as we are concerned from further contest, and determining our candidacy by a method sanctioned by law, that has been resorted to hundreds of times in this and every State in the Union, that involves no sacrifice of principle or honor on either party, and relieve the people of the district of scenes of bribery, corruption, and political debauchery which are too common attendants of conventions and primaries. I have no fears, but that the people generally of Oldham, Jefferson, and the city of Louisville will cordially indorse this action of ours, nor have I any fears that either he or I will be believed to have violated any principle of personal or political honor. I leave

this, however, to the judgment of my constituents. As to the motives which are prompting efforts to keep this matter before the party I may speak more fully within a day or two."

I call attention to the fact that my colleague did not deny that his candidacy for Congress in the fifth Kentucky district was decided by the aid of a coin and without the aid of any convention, without any caucus, without the sanction of the proper committees, without a primary election, or in any way giving the people a chance to express their preference as to who should be the Democratic nominee for Congress to succeed their then sitting member, [Mr. WILLIS.] I would have the committee which has heard his speech on civil-service reform take note of the fact that so far from denying that his nomination for Congress was made "by lot," he proclaimed it and declared that it was satisfactory to himself and Judge Hoke, in accordance with the statutes of Kentucky, and met with favor in the eyes of his constituents. This is a bad showing for his constituents and for Kentucky statutes. Had the act to regulate voting at primary elections and prevent fraud therein for Harrison, Bourbon, Campbell, and Kenton Counties, which was passed by the General Assembly of the Commonwealth of Kentucky, and approved April 19, 1880, been made to apply to Jefferson County, Kentucky, I submit that section 7 of that act had been violated by Messrs. Hoke and WILLIS, of the fifth Congressional district of Kentucky, where they decided by lot who should be the nominee of the Democratic party. Section 7 of said act is as follows:

It shall be unlawful to bet or make a wager of money or property or other thing on the result of such an election; and any one so offending shall, on conviction, be punished in the mode now prescribed by law for betting on the results of a regular election.

Now I submit that when a gentleman is a candidate for Congress, "subject to the approval of the Democratic party," it is hardly fair to the voters residing in that district to have the question of superior fitness settled by the tossing of a coin in a corner in the hands of the ambitious statesman. It would be well for us to repeat often the following passages from the sacred Scriptures:

Be not overcome of evil, but overcome evil with good.—*Romans*, xii, 21.
Submit yourselves to every ordinance of man for the Lord's sake. * * *
Servants, be subject to your masters with all fear; not only to the good and gentle, but also to the froward.—*1 Peter*, iii, 13-18.

Let every soul be subject unto the higher powers. For there is no power but of God: the powers that be are ordained of God.

Whosoever, therefore, resisteth the power resisteth the ordinance of God; and they that resist shall receive to themselves damnation.—*Romans*, xiii, 1-2.

Lift not up your horn on high; speak not with a stiff neck.

For promotion cometh neither from the east, nor the west, nor from the south.

But God is the judge; he putteth down one and setteth up another.—*Psalm*, lxxv, 5-7.

The law against gaming in Kentucky is clear, but there is a looseness about its enforcement which is by no means creditable to the Democratic authorities which control the affairs of that State. Observe the law:

Any wager upon the result of an election, no matter in what form it is made, if the real effect intended is that one party may lose and the other gain money or property, according as the election may terminate for or against a particular candidate, is gaming in contemplation of the statute. (*Commonwealth vs. Shouse*, 16 B. M. 328; see, also, *Todd vs. Caplinger*, 4 Bush, 139.) Note on page 501, General Statutes of Kentucky.

The lottery business is not as popular in Kentucky as it was before the Louisville library lottery dazzled the eyes of the whole country by the brilliancy and success of its gigantic swindling operations. The statute is, that—

Whoever shall set up, draw, manage, or otherwise promote any lottery for money or other thing, or dispose of, or promote the disposing of, any money or thing of value by way of lottery, or aid in committing either of said offenses, shall be fined from five hundred to ten thousand dollars.

PRACTICE WITHOUT LICENSE.

But, Mr. Chairman, by the law of our State (General Statutes of Kentucky, article 23, section 2) artists may dispose of their pictures "by lot," and without going into the discussion of the merits of that statute, I cite it as a semi-vindication of the cheap method resorted to by Judge Hoke and my colleague [Mr. WILLIS] to avoid the expense of a primary election which the "legislative committee and its action" foreshadowed.

But I ask my colleague, who is a firm believer in the Bible, is that being obedient to "the powers that be?" How can he as a Democrat defy the primary and the Democratic machine politicians, where only the unadulterated Democracy exercising their assumed superiority can select their fittest representative to champion their cause before the people? On what principle of political ethics is he bound by a Democratic caucus of this House when he is unwilling to test the sense of his party in primary meetings at home. What becomes of the doctrine of "home rule?" What chance have the people for civil service reform?

NO LAW FOR SETTLING A FACT BY LOT.

When and where did a Kentucky jury ever decide by legal authority any question of fact "by lot?" What judge would think for one moment of deciding a question of law "by lot?" What person accused of crime would consent to be tried "by lot" rather than "enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witness against him; to have compulsory

process for obtaining witnesses in his favor, and to have the assistance of counsel for his defense," as is guaranteed by the Constitution of the United States?

If members of Congress may properly be nominated "by lot," why may they not be elected in the same way?

By statute of Kentucky, "where damages are uncertain a jury is necessary." By article 8 of the Constitution of the United States, "in suits at common law, where the value in controversy shall exceed \$20, the right of a trial by jury shall be preserved."

Would any self-respecting court sustain a verdict certified to by a jury as the result of casting lots, regardless of the law and the evidence?

Sir, what vast expenses have been incurred by lawsuits, to no purpose, if the flipping of a nickel is the proper method to settle questions of fact as to fitness and questions of principle as to party ascendancy in this nation.

Mr. Chairman, in the confession of record in the Louisville papers, made by my colleague [Mr. WILLIS] nearly two years ago, taken in connection with his eloquent lecture on civil-service reform delivered on yesterday, I find food for the most profound reflection.

If his speech on civil-service reform means anything it means a rebuke to the plans and methods of the Republican party to maintain ascendancy as a political power in this country. This being the case, I have not felt at liberty to withhold my protest, however feeble it might be, against the inconsistent course of my independent Democratic colleague from the city of Louisville.

SMALL COIN IN POLITICS.

If my colleague [Mr. WILLIS] and Judge Hoke can prevent "scenes of bribery, corruption, and political debauchery, which are too common attendants of conventions and primaries," by the tossing of a copper, then, sir, why may we not utilize this discovery in the selection of all officers from the Presidency down to the appointment of clerks in the various departments of the Government?

We are told that certain Congressional aspirants were afraid of a convention or a primary election lest the gentlemen most anxious to be nominated should "both be set aside." Mr. Chairman, this is the gist of the whole matter, a mortal fear of being set aside. The Army is afraid of a reduction lest somebody shall be set aside. The Navy opposes a reduction lest somebody shall be set aside. The army of tax-gatherers, spies, and informers are all opposed to a reduction of taxes and clerical force lest somebody shall be set aside. And here we have the amazing spectacle of a Congressman and his warm personal friend assuming, by the toss of a dime, to nominate a Congressman for the great metropolis of my State, lest they themselves "should be set aside" by the voice of the people. It may be true that in the city of Louisville, where there are 1,700 illiterate white voters, and where it is reported that many of the best men sit idly by and allow the great affairs of State and nation to be controlled by reckless politicians, many of whom seem to live solely for the spoils of office, the voice of the people is stifled because of "bribery, corruption, and political debauchery" practiced there. But I trust to God the time may never come when the people of this country shall be prohibited by "scenes of bribery, corruption, and political debauchery," or by the flipping of a penny, from giving a full, fair, and intelligent expression as to whom they shall vote for.

I need not remind my colleague [Mr. WILLIS] of the numerous attempts by the people of our State to enact laws which would abolish the legalized lotteries—stains upon our statute-books, which, according to his own showing, have blurred the vision and blunted the sensibilities of his own constituency. I would call his attention to the fact that the mariners "cast lots and the lot fell upon Jonah;" and that "they took up Jonah and cast him forth into the sea; and the sea ceased from her raging." But will any one undertake to justify the casting of Jonah overboard because "the sea ceased from her raging?" If so, I trust he may be able to explain why "the Lord spake unto the fish and it vomited out Jonah upon the dry land?" And I cannot help thinking that the good people of Louisville must regret that the Democratic bosses of the politics of that district have become so corrupt that there is no longer any chance for the moral and religious element of that community, aspiring to Congressional honors, to obtain the object of their laudable ambition without resorting to that practice adopted by the Roman soldiers, who, when they had crucified the blessed Jesus "parted his garments, casting lots upon them what every man should take." (St. Mark, xv., 24.)

Mr. Chairman, in view of the fact that my colleague [Mr. WILLIS] is one of the most liberal, conscientious, and independent Democrats of this body, and, as I believe, perfectly sincere in his notions about reform in the civil service, I have thought it not improper to present for his consideration and for those who are to be guided by his precepts some of the inconsistencies into which, as a reformer, he has drifted.

Moreover, in view of the fact that during the last year the immigration of foreigners to our country has exceeded half a million souls, destined to become citizens of the United States, and as there are about 12,000 foreign white and 6,000 illiterate colored voters residing within the district which my colleague [Mr. WILLIS] represents, I have conceived it to be my duty to contribute my mite to the discussion of an interesting subject which has been injected into this debate, but which has very little connection with the bill under consideration.

XIII—475

CONCLUSION.

In conclusion, Mr. Chairman, I beg to say that in all this matter I have spoken purely in a political light. I say frankly that in the case of my colleague [Mr. WILLIS] it fell to the lot of a creditable gentleman. And the same may be said had it fallen to his competitor. But what guarantee have we that selection "by lot" will be confined to such gentlemen as Messrs. Hoke and WILLIS in the future. Still let us take a hopeful view of the political situation, and trust to the virtue and intelligence of the people, by the aid of Divine Providence, to save the Republic.

Now, as to appointments in Kentucky made by the present Executive, they are such as were fit to be made by reason of the competency and good reputation of the appointees. They will stand the test of the severest criticisms. The President is to be commended for his rare good judgment in their selection.

I thank the gentleman from Pennsylvania [Mr. MILLER] for having given me his time.

Extravagance in Public Expenditures.

SPEECH

OF

HON. STROTHER M. STOCKSLAGER,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 14, 1882.

On the sundry civil bill.

Mr. STOCKSLAGER said:

Mr. SPEAKER: The great struggle of 1876, in which the Democracy received a popular majority for its candidate for President and Vice-President of a quarter of a million votes, was fought by that party under the banner of "economy and reform." All parties since that time, as well as before, have in all their platforms, State and national, demanded an economical administration of public affairs. And yet, Mr. Speaker, notwithstanding these pledges, we are making the most reckless and extravagant expenditures of the public money and in some cases keeping up, as I believe, a useless class of officials at the public expense.

It will accomplish no good to talk to a Republican Congress about reducing the number of officers or their salaries, except to call the attention of the country to the matter, as that party was never known to do anything of the kind unless driven to it by an irresistible public opinion. On the contrary, they go on increasing public expenditures at an enormous rate. The increase of the net ordinary expenditures for the present fiscal year, as appropriated by the present Congress, over the expenditures of the last year, appropriated by a Democratic Congress, will aggregate the enormous sum of \$45,000,000 to \$50,000,000.

But, Mr. Speaker, it is not my purpose to go into an extended discussion of the constant and rapid increase of public expenditures wherever the Republican party has power, but rather to point out a few useless offices in the Government service and direct attention to the reckless extravagance in their payment. I desire to call the attention of the House and the country to the following list of customs districts in the United States, with number of persons employed in each, their compensation, and amount of revenue collected in each district, as shown by the official report of the Register of the Treasury to the Secretary, made June 30, 1881; it is official:

Statement of the number of persons employed in each of the following districts of the United States for the collection of customs for the fiscal year ended June 30, 1881, with their occupation and compensation, together with amount of revenue collected in each district.

It will be seen from the above list of thirty-four customs districts that there are two hundred and forty-one men employed, costing many thousands of dollars, and yet at no one of the whole number is the amount of revenue collected equal to the cost of collection. Let us take a few of them and examine them and we can see the reckless extravagance of the expenditures.

Take Barnstable, Massachusetts. We find that there are twenty-four men employed in this district, costing the Government \$9,311.60. They collected the enormous sum of \$462. We see it costs over \$20 to collect \$1. The average amount collected by each man is \$19, and the amount received for this service about \$388.

Take Dunkirk, New York. There are two men employed, costing \$2,364.15, and they collected the enormous sum of \$20, or over \$118 for each dollar collected. Each man collected \$10, and received for his services \$1,182.07.

Take Beaufort, North Carolina. There are seven men employed, costing \$2,376.79, and they collected \$13.84, costing the Government \$170 for each dollar collected. Each man collected on an average \$1.98, and received from the people the sum of \$399.54 for his onerous services.

Saint Augustine, Florida. There were six men employed, costing the Government \$1,791.80, and they collected \$59.70; costing about \$30 for each dollar collected.

Teché, Louisiana. Seven men employed, costing \$7,063.69; they collected \$235.86, or about \$30 for each dollar collected. Each man collected on an average \$33.70, and received the sum of \$1,009 for his services.

Sandusky, Ohio. Nine men employed, costing \$5,052.50; they collected \$618.82, or about one-eighth as much as they received.

Michigan, Michigan. Nineteen men employed, costing \$8,455.41, and they collected \$2,831.53.

Burlington, Iowa. The cost of collections was \$524.28, and only \$30.32 collected.

These cases, scattered all over the country, show that there are certainly some glaring and outrageous cases where good Republicans—for those employed are all Republicans—are provided for at the public expense, who in return aid the Republican committee by the 2 per cent. of their salaries paid to HUBBELL, where there is great danger, to say the least, of its use in corrupting the ballot-box and debauching the electors.

But, Mr. Speaker, bad as the foregoing official statements are, I now propose to call attention to others which are based upon the same official authority, and which are much more outrageous than those to which I have already referred.

Below is a statement of the number of persons employed in each of the following districts of the United States for the collection of cus-

toms for the fiscal year ending June 30, 1881, with their occupations and compensation, at none of which any revenue was collected:

KENNEBUNK, MAINE.	
One collector	\$599 85
One deputy collector, &c	595 60

DELAWARE, DELAWARE.

One collector	\$2,035 76
One special deputy collector	1,600 00
One deputy collector	600 00
Two deputy collectors	1,000 00
One inspector	997 00
One inspector	994 50
Five boatmen	1,500 00

Here we find, Mr. Speaker, twenty-one districts kept up, in which eighty-eight men are employed at a cost of many thousands of dollars to the Government, at none of which is a single dollar of revenue collected. Why the necessity for keeping up these districts? There is no reason. There can be only one excuse for it, and that is that places may be made for Republicans to live at the expense of the public. It is sometimes contended that it is necessary to keep up these districts to prevent smuggling and other frauds upon the revenue. But, Mr. Speaker, even if that were true, it occurs to me that there would be no necessity for keeping from five to twenty men at a place. But there is nothing in this argument, especially as to many of the districts. In my own State, at Evansville, in the district represented by my colleague, Mr. HELLMAN, there are two men employed and not a dollar collected, and so far as I have been able to learn never was a dollar collected. Certainly no one will contend that there is any danger of smuggling there. So with Galesburgh, Illinois; Cairo, Illinois; Vicksburgh, Mississippi, and many other places. No, Mr. Speaker, it is not because it is necessary for the Government service to have this large number of men drawing pay from the Government and performing no services, but is to meet the exigencies of party necessity, as I believe.

It was very recently stated upon the floor of this House by the distinguished gentleman from Tennessee, the former chairman of the Committee on Appropriations, and one of the most careful and most accurate members of this House, that within a period of ten years, between 1870 and 1880, our list of civil officers in the employ of the General Government had nearly doubled; that in 1870 1.4 per cent. of the whole population held civil offices under the General Government; and in 1880 2.2 per cent. of the whole population were paid officers upon the civil list of the United States.

From this statement, of the accuracy of which I have no doubt, it will be seen that the number of officials is increasing enormously, and it certainly is a cause for alarm, and especially when they must be supported in idleness, as I have shown many of them are, upon the money rung from the tax-payers of the country. Let us weed out useless officials, abolish useless offices, and begin to enforce that economy and reform so much needed in the public service, and to which all parties are pledged.

Death of Hon. Thomas Allen.

SPEECH

OF

HON. WILLIAM H. HATCH,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 23, 1882.

The House having under consideration resolutions of respect for the memory and services of Hon. THOMAS ALLEN, deceased, late a Representative from the State of Missouri—

Mr. HATCH said:

Mr. SPEAKER: Hon. THOMAS ALLEN, a Representative from the State of Missouri, died in the city of Washington on the 8th day of April, 1882. On that day the announcement of his death was made to the House and a committee appointed consisting of seven members and three Senators to escort his remains to the city of Pittsfield, Massachusetts, for interment. Hon. J. R. Chalmers, of Mississippi, then a member of this House, was appointed by the Speaker as one of that committee. Having known him many years and being an admirer of Mr. ALLEN, he had prepared some remarks upon his life and character which he had expected to deliver upon this occasion. When it was decided by the House that he was not a member of this Congress he left his manuscript with me, as the chairman of that committee, with a personal request that I should read it as a part of my remarks upon this occasion, which I now proceed to do.

REMARKS PREPARED BY MR. CHALMERS.

Mr. SPEAKER: The committee selected by you under the order of this House to attend the funeral ceremonies of our deceased brother, Hon. THOMAS ALLEN, of Missouri, have performed that solemn duty. We escorted his remains to his native town, where they were temporarily deposited in his summer mansion built on the spot where once stood his grandfather's house in which he was born. The funeral services were performed in the Congregational church of which his grandfather, Thomas Allen, was the first pastor, and we buried him beside his forefathers, in the family lot, in the cemetery of

Pittsfield, Massachusetts. This is one of the most striking of the New England towns. Situated on the Berkshire hills, near the headwaters of the Housatonic River, it is 1,100 feet above the level of the sea, and its air is pure, bracing, and invigorating.

There are no rough and precipitous mountains around it suggestive of strong and uncultivated men, but the massive hills and Greylock Mountain, seen from a distance through the pure, clear atmosphere, are suggestive of calm, peaceful, and dignified manhood. There are no mountain torrents to break the silence of the surrounding hills, but there are beautiful and pellucid lakes and clear, bold running streams that set the wheels of machinery in motion and send up a mingled hum from the voices of nature and art. To one who saw it thirty-three years ago Pittsfield presents the appearance of great improvement, but to one who studies its possibilities for the future it seems but in its infancy, with vast undeveloped resources and power still in reserve. It is a historic town and filled with honorable names and memories.

The Allens, the Larneds, the Pomeroyes, and the Merrills were honored names in the days of the Revolution, and these names are preserved with honor by the present generation. We were shown the park beneath whose branching elms the citizen soldiers of Pittsfield assembled to march forth to battle in 1776, in 1812, and again in 1861. Here stood the old church from which Thomas Allen, the fighting parson, led his congregation to the battle of Bennington. The old frame building is gone, and in its place stands a massive structure of native granite with a memorial slab in commemoration of Thomas Allen, the grandfather of our colleague; and on the opposite side of the park stands the Berkshire Athenaeum, a princely donation to the town from our deceased friend, and a lasting monument to his culture, his taste, his liberality, and his ennobling devotion to the home of his childhood.

We reached Pittsfield on the day of its annual town meeting, and nothing could more clearly indicate the character of its inhabitants than their conduct on this occasion. No man could be more highly esteemed than THOMAS ALLEN was esteemed by them. They showed this in every gesture, word, and look. There was no violent demonstration of feeling and no ostentatious parade, but there was manifest appearance of deep and heartfelt manly grief; and yet the town meeting was not adjourned. It is a day of great political import in New England—a day on which the entire legislative business of the town is to be transacted for the next year, and with them duty comes first. Their ancestors, who followed Thomas Allen to the battle of Bennington, did not fire a gun until they had knelt on the battlefield and listened to a fervid prayer from their earnest leader, and their descendants move with the same precision and order to-day.

The town meeting is democracy in its simplest form, where the people assemble in the town hall and legislate for themselves without the intervention of representatives. The town hall has been called the cradle of liberty, and it was recently said on this floor by Mr. Tillman, of South Carolina, that if our liberties are ever overthrown the last struggle will be made at the door of a town hall in New England. It was amid such scenes and surrounded by such a people that THOMAS ALLEN, the late member of Congress from the second district of Missouri, was born and reared. If birth-place has any influence over the destiny of man, if the scenes of childhood mold the character or shape the course of maturer years, then the silent grandeur of the Berkshire hills impressed themselves upon the life and character of the modest, dignified, and intellectual man whose loss we now mourn.

THOMAS ALLEN was born in Pittsfield, Massachusetts, August 29, 1813, in the midst of our second war with Great Britain, in which his father was a captain, and he graduated at Union College in 1832. I leave to others the details of his remarkable and successful career, and shall only call attention to a few leading features of his history. With a good education and only \$25 in money, at the age of nineteen, friendless and alone, he began the struggle of life in the great metropolis of New York; at the age of sixty-nine he died, leaving an estate worth fifteen millions in money. After five years of hard labor and close economy in New York, at the age of twenty-three he appeared in Washington as the editor of the *Madisonian*, through the columns of which he soon wielded a powerful influence in political affairs. In a contest for Public Printer, then conferred only on leading political writers, he was elected over such distinguished men as Gales and Seaton, of the *National Intelligencer*, and Blair and Rives, of the *Globe*.

A few years later he was an acknowledged power in political circles, consulted about the formation of Mr. Tyler's Cabinet, and the editor of the Administration organ. Such rapid and brilliant success might have addled the brains of a less self-poised and clear-headed man. To a young man of talent, power, and ambition nothing is more fascinating and seductive than political life. To speak from the editorial tripod and watch the effect of his arguments upon eager and increasing readers, and see his sentiments quoted, commended, and followed by the multitude, gives pleasing and peculiar satisfaction.

To speak from the hustings and see the crowd swayed by his utterances, to hear the shouts of exultant partisans, to feel the inspiring influence of that mesmeric sympathy which binds the speaker to the hearts of his audience, and to know that he can arouse the feelings and play upon the passions and prejudices of his hearers as the

artist plays upon an instrument thoroughly in tune, produces a delirium of delight, which unites the orator for the more quiet work of business life. And the fame of Henry Clay, the old man eloquent, upon whose words listening Senates hung, has made a seat in Congress the day-dream of every ambitious youth in the land.

Mr. ALLEN tasted the intoxicating draught of political life, he received the plaudits of admiring friends, he heard the prophetic praise from Andrew Jackson, and obtained the entire confidence of a President in power, and yet the cup passed from him without injury and without regret. In 1842, when the administration of his friend, Mr. Tyler, was in full power, he retired from the political arena in Washington and removed to Saint Louis, Missouri, where he married a lovely and wealthy young lady and thoroughly identified himself with the growing interests of his adopted home. Like Prentiss and Quitman, who were so much honored and loved in Mississippi, he came of the best New England stock, which was broadened and liberalized by transplanting in Southern soil.

The sudden change from a bare competency to what was then great wealth, received with his bride, did not enervate the mind or slacken the energies of Mr. ALLEN, but he made it tributary to an active, useful, and successful business career. Tom Benton, the great Missouri Senator, pointing across the Rocky Mountains to the Pacific Ocean, said: "There is the East." TOM ALLEN, catching the inspiration, began the construction of the first of that system of Pacific railroads which has since become the great highway of commerce between the East and the West. Railroad after railroad and corporation after corporation grew and prospered under his successful management, until war came to check the prosperity of his adopted State.

When peace was restored he once more entered actively into every enterprise calculated to increase the prosperity of Saint Louis, and to him more than any other one man is due the liberal system of internal improvements adopted by the Legislature of Missouri, and the construction of the Iron Mountain Railroad, which opened up to the Saint Louis market the richest mineral region of the world. But in the midst of his arduous labors he found time for the intellectual enjoyment of literary and scientific studies and for the pleasing duties of social and domestic life. A cultured companion, a genial friend, an affectionate husband, and a devoted father, he was at the same time a sound lawyer, a strong political thinker, and wonderful in business success—not wonderful in the rapidity or amount of his accumulations, for there are many who have surpassed him in both, but wonderful for the honesty and integrity of his dealings and the gradual and uniform success of his operations. While others have amassed greater fortunes and with more rapidity, their pathway has been strewn with the wreck of thousands upon whose ruined fortunes they rose.

Mr. ALLEN was formed in a different mold. He was no stock-jobber, no speculator, and no corporation wrecker, but an honest, straightforward worker in the regular channels of business life. His fortune, though large, was the result of regular and legitimate profit in regular and legitimate trade. His moral character was as pure as the air of his childhood's home; his principles were as firm as the granite in his native hills; and his intellectual strength, like the water-power of his native town, seemed to rise equal to every demand upon it and to perform its work with an ease that indicated immense power still in reserve.

Whether we consider him toiling in New York as attorney's clerk on a salary of \$300 a year, or successfully conducting a leading political journal in Washington, or shaping the internal-improvement system of Missouri in the State senate, or presiding over great corporations and turning railroad lines to the Pacific and the Southwest, or dying by inches under a painful and incurable disease, we find him the same self-poised, unostentatious man, bearing himself with dignity, ability, and courage. He signalized his love of ancestry and his devotion to his birth-place by purchasing his grandfather's farm and erecting a princely mansion where the family homestead once stood. He left a granite monument to his cultured taste and his devotion to the cause of education in the Berkshire Athenaeum, erected in his native village at a cost of \$50,000.

He left a monument of his liberal views and progressive spirit in the new fire-proof Southern Hotel erected in his adopted city, Saint Louis, the most magnificent and best appointed hotel in the world. And in commemoration of his genius, perception, and business success he has left a name to be forever connected with the first of the great system of Pacific railroads and indissolubly linked with the wonderful Iron Mountain of Missouri. In politics he was, like his grandfather, a thoroughgoing Democrat, and a desire to do his whole duty to his party impelled him at great risk to be present at the organization of this House; and this perhaps hastened his final dissolution.

But the seeds of a fatal disease were clearly developed in his system long before his death, and he knew for many months that he must surely and shortly die. His heroic fortitude and Christian patience under his long and painful suffering and impending death were in perfect harmony with his whole character and life. A short time before his death, and when it was known that his end was near, my attention was attracted by the statue of the dying Napoleon in the Corcoran Art Gallery. The cold marble seemed almost to breathe the anguish of the dying hero. His body swollen with disease and

his face pinched and shrunken with pain, tells the story of a bursting heart which, like the imprisoned eagle, is beating itself to death against the wires of its cage. It pictured the end of an ambitious and dissatisfied soul; the end of a man who knew he must die, and yet his untamed and untamable spirit speaks in tones of remonstrance and resistance, and demands one more chance to live and be free.

While I gazed on it, I could but think of our patient, suffering colleague, who was dying but a few short steps away. He too knew that he must die, and he was meeting death with the same quiet Christian resignation that he had met the issues of life. He was not unwilling to die, and yet he expressed to his pastor the desire that he might have been spared a few years more to do something in Congress for the home of his adoption. He was full of honors, and yet his spirit felt that its full mission had not been filled. He was full of years, and yet older men than he bore his body to the grave. At the head of his coffin as it lay in the church was a column of sweet-scented flowers representing a broken shaft. The broken shaft is usually the emblem of a young life cut short in its career. This could not be said of THOMAS ALLEN, and yet in his dying moments he felt that he had left a portion of his work unaccomplished.

When he retired from the political arena in Washington in 1842, the hope and desire that he might some day return as a member of Congress might have filled his imagination as it did that of many ambitious young men before him. He had now gathered wealth to the fullness of his desire. He had retired from active business labor and prepared for cultivated enjoyment and political life, but like Moses on Mount Pisgah he was only permitted to behold the Canaan he had so long sought. The overtaxed physical system fell beneath the strain imposed on it by a too vigorous mind; the engine was too powerful for the frame that encased it, and the exhausted body perished while the spirit was yet strong. The broken shaft of sweet-scented flowers was a fitting emblem of a life which breathed only the fragrance of purity and a death that cut short a labor of usefulness and love.

In connection with the remarks that I had proposed to submit on this solemn occasion—solemn to every member of the Missouri delegation particularly, and to all who knew Mr. ALLEN in life—and without consuming the time of the House to read it at this time, I propose to print the able, carefully-prepared, and truthful tribute to the life and worth of THOMAS ALLEN, made at his own home upon the occasion of his burial by his pastor, Rev. J. L. Jenkins.

SERMON.

[1 Samuel, 25: 1.—Samuel died; and all the Israelites were gathered together, and lamented him, and buried him in his house at Ramah.]

Not since Moses, who died four hundred years before, had there been in Israel so great a man as Samuel. In troublesome times he preserved order, administered justice. He consolidated the nation, founded schools, served faithfully and wisely for thirty years in high positions. He died, and dying received the most generous appreciation and homage.

The means by which these were expressed are mentioned. I dwell for a moment upon each in order:

First. "All the Israelites were gathered together." Says Mr. Stanley: "We are told with a peculiar emphasis of expression that all the Israelites, not one portion or fragment only, as might have been expected in that time of division and confusion, but all were gathered together around him who had been the benefactor of all." A time had come when men of all sections and factions were constrained to recognize eminent services and eminent ability and eminent worth. They stopped their dissensions, forgot party allegiance, put by local prejudices, personal grievances. Men who forced Samuel from office, and men who would keep him in it, met at his grave and alike honored him. It was a generous tribute, this gathering of all the Israelites at the burial of Samuel. From the extremes of the kingdom, from its chief cities, men came to a quiet village that by their presence they might express their appreciation of the labors and worth of the man who had died.

Second. "They lamented him." Grief soon becomes conventional. There are prescribed ways for manifesting it, a period fixed during which signs of sorrow are exposed. When in Europe a member of a royal family dies, other courts go into mourning for a specified time. Among us, I believe, there are rules respecting the matter. Black is to be worn so long, displaced so gradually. We early find traces of such conventionalities. Aaron and Moses were mourned for thirty days. Of Samuel it is simply said, "They lamented him." The plain, unqualified statement testifies to the genuineness of the sorrow; a sorrow superior to ceremonies and demanding its own free, unrestricted indulgence! What heartier tribute was possible! "They lamented him."

Third. "They buried him in his house at Ramah." In his house means probably in the court or garden attached to his house. We have another account of Samuel's burial. "All Israel had lamented him and buried him in Ramah, even in his own city." Evidently the great, simple man's preferences were regarded. Sorrow for him was tender, as it was genuine and universal. They buried him in his own house at Ramah, his own city. There were more famous places; Gibeah, the royal residence, was one. Saul, who was fond of processions and display, might have arranged a splendid funeral pageant and brought crowds to his capital. Daring, impulsive as he was, he could not violate the intrinsic propriety which demanded the burial of the simple, stern prophet in the village where he was born and lived. So he was buried in Ramah, his own city.

This Ramah had the power of awakening strong local attachments. Its probable site was a hill-top, now easily seen from Jerusalem, looking to the northeast. It commanded fine views. Its people were intelligent and good, if Samuel's parents represent them. Here he was born and carefully nurtured by his wise and pious mother. Here he made his own home when a man; here he located a school of the prophets; "here," as Matthew Henry expresses it, "he enjoyed himself and his God in his advanced years;" and here, in the place he had served and made illustrious, he was buried.

The power of awakening strong local attachment long continued to Ramah. A thousand years after Samuel's death, the little village is made famous again by a worthy citizen who could not be tempted from it by all the splendors of a great city and capital. Joseph, the honorable counselor, who went in boldly to Pilate and begged the Lord's body and fitly buried it, was known as Joseph of Arimathea, another name for Ramah, a resident, if not a native of the place where Samuel was born and lived and was buried.

To be lamented as Samuel was by all his countrymen, to be mourned for a very great number of days, to be peacefully buried in his own quiet and loved village, were there not here ample compensations for years of industry and public service. Not till men are gone are they known. Under such condition do we live. Our lives here are such that what is best is seldom most conspicuous. Here influences that warp and distort judgments are many and strong. Here occasions for misunderstandings, for conflict, for alienations, are so frequent that perfect concord is impossible. Wise men do not expect it. What is possible, what may be reasonably expected, is that when a man dies, then his fellows will be quick to see and confess his worth and the worth of his services. If, under the great illumination which death diffuses, men remain blind and refuse to see the excellencies made apparent, we are forced to recognize the presence and power of inveterate prejudice or wicked hate. If, on the other hand, when men die and in their ascension lose the disfigurements and imperfections belonging to the earthly life, and they who are spectators exult in the new clear revelations of truth and beauty, and long to abide under them ever more, what worthier tribute to the dead can there be, and what conduct worthier of the living.

We often hear the homage paid the dead disparaged, undervalued. It is called cheap, and a poor substitute for the just treatment of the living. To me it seems very precious. Very precious, for the act embodies the best sentiments and wisest judgments of men. Men see clearly and feel rightly at the grave as nowhere else. Here clouds and mists rise and disappear, prejudices are carried off, all the spiritual forces are at liberty to act freely, without hindrance. Hence the real, substantial worth of the homage paid the dead. Men do nothing of finer quality. Estimates made at the grave partake of the clemency and justice of Heaven. It was not cheap and meaningless, this gathering of all the Israelites at Ramah, the mourning for Samuel for a very great number of days, and his quiet burial in his own city. The whole world held then nothing of greater value. Here were love, gratitude, veneration. No costlier offerings could be. There was almost infinite worth in them. So when any grave friends and acquaintances gather, when men come from afar to be present, when every available means is used for expressing affection, respect, the homage is not cheap and meaningless. It is precious and significant.

That burial in Ramah three thousand years ago, when friends and fellow-citizens gathered and lamented and buried a faithful, good man, has had innumerable repetitions, is being repeated now and here.

THOMAS ALLEN was born in this town August 29, 1813, in a house standing on the site where, in 1858, he built the one from which we have just brought his body. His father was Jonathan Allen. He was named for his grandfather, Thomas Allen, the first pastor of this church. His mother was Eunice Williams Larned, granddaughter of Colonel Israel Williams, of Hatfield. So that it has been said Mr. ALLEN "derived his descent on one side from one of the revolutionary whigs most noted for his uncompromising zeal, and on the other from one of the staunchest American adherents to the British Crown." His ancestry was not a weak one. The chances were there would be in him a double portion of strength. It is man's first and most lasting advantage to be well born; to inherit a good body, full of vitality, a sound mind, firm will, a controlling moral sense. There was once in New England a generation able to transmit these valuable legacies. It could not give children great riches, great honors; it could and did give what was of greater worth—health, intellect, determination, conscience. Into a large inheritance of these Mr. ALLEN was born. His education began formally in the schools of this town, in which he continued till he entered Union College in 1829.

His purposed destination was the law. In 1835 he was admitted to the New York bar. His career was not to be that of a lawyer. He began early to write; wrote so much that it was said of him at twenty-one that no young man in the country of his age had written so much. His vocation seemed found; he was to be an editor. It proved not to be his calling.

He betrayed early a taste for politics. His mind was suited to grave public questions; he had the power to influence by strong, persuasive speech. But his life-work was not to be that of the mere partisan politician. After various essays in different directions he was guided to his assigned task. Devout believers in God find marks of His wisdom in the orderly migrations of birds and beasts; devout students of history see God in emigrations, in colonizations, in the grand movements by which the world's population is transferred from one scene of effort to another. This large faith bears reduction and individualization. The steps of a man are ordered by God. There are always foreordinations requiring the birth to be in the proper Bethlehem, the preparatory life in Nazareth, the years of active service in busy, growing Capernaum. Men do not determine their own careers; they fulfill them. We are all God-led as truly as were the Israelites. What I am asserting was true of Mr. ALLEN. There were years of uncertainty, of attempts, of experiments. He was feeling after the track he was to pursue through the wilderness of this world; he was seeking after the work given him to do. His seeking was in time rewarded.

The workman and the work came together. The work was a great work. He all learn early the famous saying of Lord Bacon, to the effect that the most heroic of works is the founding of a colony. He is called to grand tasks who has to do with shaping the destiny of a great State. A first necessity is its enrichment by the discovery and use of its own resources by the easy introduction of needed supplies from without. Changes have come over the world. Forts, defenses, are not a primal need. Populations are not now to be kept out of given territories; they are to be tempted into them. It is high service those do who cast up highways in the wilderness; who redeem the fruitful earth from barrenness; who expose the treasures of its mines; who, in the biblical sense of the word, "subdue the earth." These are your true conquerors. They come up out of Edoms, their garments not rolled in blood but fragrant with the odors of field and vineyard; they mark their progress not by ruin and desolation but by the waste places they build. The psalm chanted over their conquests is without wail or sigh, is the merry shout of harvesters, the undisturbed laughter of children in village streets.

A new type of heroes is appearing. The old traditional type is becoming extinct. The man, sure of honor, is the explorer, the inventor, the discoverer, who enriches human life and adds to the well-being of mankind; who makes States strong not in fortresses but in the resources supporting great populations and in the means whereby great populations are made intelligent, virtuous, pious. He is called to a supreme work who has to do with shaping the destiny of a great commonwealth. That is a heroic work whose end is public enrichment and strengthening of a State. Men do not blunder upon such works. God guides men for them. It was so with Mr. ALLEN. He was raised up for a work and so found it. He was led from this native village, with many wanderings, half across the continent to a spot predestined to be the seat of empire, early christened with a most sovereign name. He saw possibilities others saw not, and so was a prophet. He had the voice of a prophet, and aroused the people. He had the compelling force of a prophet, and his bidding was more or less heeded. Thus, under a divine guidance and because of a divine endowment, did Mr. ALLEN find the great, grand work of his life. It might be that a man should be led to his assigned work and be unconscious of the leading. He might think the work a discovery of his own, or he might think nothing of it. Neither was possible to Mr. ALLEN. He had what men of his class commonly have, faith in God. It is not the unbeliever that, Abraham-like, leaves country and home and friends for an unknown land. Faith has wrought civilizations, and only faith. The world's best workers have been and must be believers. Mr. ALLEN was a believer in God. "I know not," he said, "how is it with other men, but I have been a man of prayer all my life. I have always before important decisions sought guidance from God." He believed the ordering of his steps was with God.

His aims were to make his labors promotive of divine ends. I am not claiming that he did not seek his own profit in what he did; I am not supposing that Mr. ALLEN was devoted to the special service of God as the early Jesuit preachers and missionaries were. I am, however, very certain that it was his aim to promote on the earth the kingdom of God. For this phrase is a large one; the devoted Jesuit did not understand it fully; perhaps not so well as the energetic, far-seeing man of business. That which is natural is first. A State must have a material basis; good society must have physical resources. It is a divine work to find and supply these. Manna no longer falls from heaven. Ravens no longer bring food. The kingdom of God may not be meat and drink, but it would soon, so far as the earth is concerned, come to an end without them. Mr. ALLEN did not confine his efforts to merely material results. By an early and always indulgent impulse he was a man of varied and pronounced scholarly tastes. He was, as has been said, an effective writer. It is possible to make a valuable volume of the papers prepared by him on different subjects. He was interested in and promoted the sciences. He was the wise patron of education. His wisdom, his insight, are conspicuous in his gift to his native town. He could do nothing better for it than encourage the habit of good reading among its people. The beautiful building whose doorway is fittingly draped in mourning to-day will not only perpetuate here the memory of his name but will be a testimony to his wisdom.

I have not intended any studied analysis of Mr. ALLEN's character. I think the hasty sketch given reveals him. He was well born; had found a work—a work that could be done only by a man rarely gifted. He did his work well. He did a great work well. There were once princes in Europe ruling a smaller territory than Mr. ALLEN managed, a smaller number of subjects than he had men under him, handling no such sums of money as he handled. This great work he did, and did well. And it is measure and indication of the rare powers in him. Besides these great executive abilities he had other rare gifts. Not every great worker is a scholar. Mr. ALLEN was. Not every great worker is a man of large heart. Mr. ALLEN was. He had two homes. He did the impossible; he served two masters. We know he loved Pittsfield. He came back when able and bought his birth-place, built here for himself a home, delighted to come to it. And here he was interested in our local affairs. Would have our burial place beautified. Among his last gifts was one toward the improvement of the interior of this church. He attended the meetings of the county historical society, prepared and read papers before it. Was president of the board of trustees of the Athenaeum. And here he is brought for burial that he might rest with his forefathers. Pittsfield did not engross all Mr. ALLEN's affection, interest. He loved the city which was his home, and whose prosperity he so wisely and successfully promoted. Here he was loved, respected. It did not seem to us a strange thing when his fellow-citizens elected him member of Congress. I think we all rejoiced in their act. Not only that it honored one of us but because it was an honor most worthily bestowed. Here, where he was known, where the discipline of his life was known; here, where his firm devotion to the Union was known, here it was felt that a new and strong man was putting his hand upon the National Government, and that therefore it would be the more stable. To his adopted home Mr. ALLEN was as loyal as to his birth-place. "I would like," he said in his last sickness, "to live a few years longer. There are some things I would like to do for Missouri." He died in her service. In her loss we share. Our hope for her is that other men, as able, as good, may be found to serve her, and lead her on to greater and greater prosperity.

There was in Mr. ALLEN a strong moral sense. He had that which has been in the past rather characteristic of New England. We have not always excelled in fine manners, in many elegancies, but we have had a robust sense of what was right and wrong. Hence reforms have so easily gotten and kept a foothold here. We are growing practical, are being practical in matters of expediency, and yet we believe wrong is wrong and right is right, that they are contrary one to the other, as far apart, as irreconcilable as light and darkness, heaven and hell. This New England conscientiousness was in Mr. ALLEN. He discriminated. He felt the imperative claim of the right. He revolted from the wrong. At the base of his character was this firm rock. Allied to his moral sensitiveness was Mr. ALLEN's faith in God. He had this, not as an inheritance, but as a conviction, and not as a useless conviction. God was an intelligent person to him, a being from whom direction could be received, to whom service was due. Mr. ALLEN believed in immortality. He may well have believed in it. He could not easily conclude that a force which had been what his personal will and energy had been should suddenly cease. He never supposed it would. In the long sickness which he suffered from his mind was naturally much engaged with the supreme problems of life and death. He was able to think calmly and protractedly. His thoughts were high. He had, he said, during his illness, revelations. Yes, revelations of God, and in many ways. Evidently God was in his thoughts much. So in those weeks, months, of pain, of confinement, as he was drawing nearer to God, God drew near to him. And at last he was not, for God had taken him.

Public Buildings.

SPEECH

OF

HON. W. S. SHALLENBERGER,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 5, 1882,

On the subject of public buildings.

Mr. SHALLENBERGER said:

Mr. SPEAKER: The Senate bill which has just passed the House without a dissenting voice, authorizing the construction of a public building for the accommodation of the United States courts, post-office, and other Government offices in the city of Fort Wayne, Indiana, is probably the last bill of this character which will pass Congress before adjournment.

In order to correct some misrepresentations in reference to the character and amount of the appropriations for public buildings made by the present Congress, and to satisfy very many members of the House who are continually seeking information on this subject, I desire, as chairman of the committee to which is referred all bills relating to the subject of public buildings and grounds, to submit a

statement in detail of all bills referred to the committee, the present condition of the same, the number which have finally passed, and the appropriations therefor. Also a list of all appropriations made by the present Congress in continuation of work upon buildings authorized by former Congresses, which, taken together, will show the aggregate appropriations made in the present Forty-seventh Congress for the public buildings and grounds of the United States. Thirty-three buildings in all have been authorized by the present Congress, as follows:

Public buildings authorized by the Forty-seventh Congress and appropriations therefor.

Name of place.	Ultimate cost.	Present appropriation.
Abingdon, Virginia	\$50,000	\$25,000
Brooklyn, New York	800,000	300,000
Columbus, Ohio	250,000	100,000
Concord, New Hampshire	200,000	100,000
Council Bluffs, Iowa	100,000	50,000
Dallas, Texas	75,000	37,500
Denver, Colorado	300,000	100,000
Detroit, Michigan	600,000	250,000
Erie, Pennsylvania	150,000	100,000
Fort Wayne, Indiana	100,000	50,000
Frankfort, Kentucky	100,000	100,000
Galveston, Texas	125,000	62,500
Greensborough, North Carolina	50,000	25,000
Hannibal, Missouri	75,000	37,500
Harrisonburgh, Virginia	50,000	25,000
Jackson, Tennessee	50,000	25,000
Leavenworth, Kansas	100,000	10,000
Louisville, Kentucky	500,000	200,000
Lynchburgh, Virginia	100,000	50,000
Marquette, Michigan	100,000	50,000
Minneapolis, Minnesota	175,000	60,000
Oxford, Mississippi	50,000	25,000
Pensacola, Florida	200,000	200,000
Peoria, Illinois	225,000	100,000
Poughkeepsie, New York	75,000	75,000
Quincy, Illinois	175,000	87,500
Rochester, New York	300,000	150,000
Saint Joseph, Missouri	75,000	37,500
Scranton, Pennsylvania	75,000	37,500
Shreveport, Louisiana	100,000	100,000
Syracuse, New York	200,000	100,000
Terre Haute, Indiana	150,000	75,000
Williamsport, Pennsylvania	100,000	50,000
Total	5,775,000	2,732,500

In addition to the above appropriations the following amounts have been appropriated for the continuation of work upon buildings authorized by former Congresses:

Appropriations Forty-seventh Congress for continuation of work on buildings authorized by former Congresses, the improvement of grounds connected therewith, &c.

Place.	Amount.	Place.	Amount.
Montgomery, Alabama	\$60,000	Buffalo, New York	\$87,500
Little Rock, Arkansas	3,000	Utica, New York	7,500
Washington, D. C.	15,000	Cleveland, Ohio	150,000
Washington, D. C.	25,000	Cincinnati, Ohio	350,000
Hartford, Connecticut	20,000	Cincinnati, Ohio	100,000
Key West, Florida	4,000	Toledo, Ohio	100,000
Cairo, Illinois	60,000	Pittsburgh, Pennsylvania	200,000
Chicago, Illinois	31,000	Philadelphia, Pennsylvania	400,000
Topeka, Kansas	40,000	Memphis, Tennessee	75,000
Paducah, Kentucky	25,000	Nashville, Tennessee	6,000
New Orleans, Louisiana	60,000	Danville, Virginia	30,000
New Orleans, Louisiana	100,000	Port Townsend, Washington Territory	18,000
Baltimore, Maryland	250,000	Charlestown, West Virginia	10,000
Baltimore, Maryland	100,000	Buildings under the War and Interior Departments	663,500
Boston, Massachusetts	175,000	Building under the control of the Treasury Department	140,000
Fall River, Massachusetts	15,000		
Kansas City, Missouri	75,000	Total	3,624,500
Saint Louis, Missouri	180,000		
Jersey City, New Jersey	4,000		
Albany, New York	25,000		
New York, New York	20,000		

From the above statement it will appear that the total appropriations for buildings authorized, as well as those in process of construction during the present Congress, aggregate \$6,357,000.

From a digest of appropriations prepared by the Treasury Department for each fiscal year it appears that the aggregate appropriation for public buildings and grounds during the Forty-fourth Congress was \$5,731,632.78, for the Forty-fifth Congress \$8,037,475.97, and for the Forty-sixth Congress \$8,252,047.17.

I have not had time to prepare a careful statement, as I should liked to have done, of the exact amount of appropriations made during each Congress since the war closed, but find in convenient form

Executive Document No. 12, Forty-third Congress, first session Senate, in response to a resolution of the Senate, a letter of the Secretary of the Treasury, which gives the aggregate amounts expended for public buildings and grounds in each State and Territory, also the District of Columbia, from June 30, 1865, to June 30, 1873, from which it appears that the total expenditures covering four Congresses were \$28,348,389.52; or an average expenditure during the Thirty-eighth, Thirty-ninth, Fortieth, and Forty-first Congresses of \$7,062,097.38.

The average, as will appear from the figures given, for the Forty-fourth, Forty-fifth, and Forty-sixth Congresses was \$7,340,384.64.

RECAPITULATION.

Average aggregate appropriations during the Thirty-eighth, Thirty-ninth, Fortieth, and Forty-first Congresses.....	\$7,062,097 38
Aggregate appropriations, Forty-fourth Congress.....	5,731,632 78
Aggregate appropriations, Forty-fifth Congress.....	8,037,475 97
Aggregate appropriations, Forty-sixth Congress.....	8,252,047 17
Aggregate appropriations, Forty-seventh Congress.....	6,357,000 00

The number of buildings authorized by the present Congress is larger than for many years, and yet the aggregate appropriation therefor is comparatively small. The buildings are distributed over the country, chiefly in the smaller cities.

The five cities of Boston, Philadelphia, Chicago, Cincinnati, and Saint Louis together absorbed nearly one-half of all appropriation made in the Forty-fourth, Forty-fifth, and Forty-sixth Congresses. They received \$3,216,000 in the Forty-fourth, \$3,675,000 in the Forty-fifth, and \$2,820,000 in the Forty-sixth Congress. These large and expensive structures will soon be completed, and I sincerely hope that in future our public buildings may be less expensive and more widely distributed. The House committee has in almost every instance reduced the ultimate cost of buildings, and in some instances greatly below the amount named in the bill as introduced.

It will also be observed that the House committee favors in many cases smaller amounts than the Senate. Indeed the House itself has not only sustained the committee by a large majority to the full extent it was willing to go in fixing the limit of cost but has in several instances, and at least once against my personal appeal as chairman, voted an increase over the House bill to meet in part the previous action of the Senate. Out of one hundred and twenty-nine bills for separate buildings introduced and referred to the committee during the present Congress only sixty-one have received favorable action and have been placed, under the rules, upon the Calendar of the House. The committee has not sought in any instance to secure the passage of a bill or defeat its passage by invoking partisan or sectional considerations.

Every bill was carefully scrutinized in committee, the phraseology made to correspond in its general provisions to a form adopted by the joint committee of the Senate and House, so that the Government might be fully protected by perfect title and ceded jurisdiction before any money should be expended on the site, and providing further that not less than forty feet and as much more as the Secretary of the Treasury may determine shall be open space around the building to afford light, ventilation, and protection from fire. Your committee believe that as a rule more ground should be purchased originally as a site for public buildings. Scarcely a city in this country can be named in which unimproved ground is not a good investment, and the increasing needs of the service can in that event be met by additions to the building.

The lot of ground should be ample and the present building only large enough to meet the wants of the near future. Plans can be drawn which provide for future extension. The number of buildings authorized by the Forty-seventh Congress, as I have said, is large, but the average cost when completed will be small. No particular effort was made to distribute them over the country, but it will be observed that they are very well scattered over seventeen States and one Territory—twelve go to the South at an average ultimate cost of \$120,833.33, thirteen to the West at an average cost of \$184,615.38, and eight to the Middle and Eastern States at an average cost of \$237,500.

The present appropriation for these thirty-three buildings is larger than is usually made the first year and the aggregate appropriation for the session are thereby increased, but it will result, I think, in a decided gain to the Government.

One great objection to the system under which public buildings have been constructed heretofore has been the tedious delays incident to dribbling appropriations over a series of years.

There is no sufficient reason why Government buildings should not be pushed rapidly to completion, the official force of superintendent, clerk, &c., discharged, the rentals paid by the Government stopped, and the capital invested made active.

I hope that radical changes can be made in this respect. I commend the whole subject to the Secretary of the Treasury, in the hope that he will give the committee at the opening of the next session the benefit of his experience and good judgment, to the end that methods as nearly akin as possible to those adopted by our best business men may be secured and enforced by amended legislation, if need be, in the construction of all public buildings.

EXTRAVAGANT RENTALS PAID.

The rentals paid by the Government aggregate an immense sum, and are necessarily extravagant in some cases. Buildings such as

are adapted to the use of the Government are few and held at high rates. No provision can be made until the necessity is upon the Department to have more room. Healthy competition is therefore difficult to find, yet I am satisfied rents might be considerably reduced by a vigorous exercise of proper authority in the heads of Departments.

I am surprised to find our Democratic friends resist almost unanimously every effort made to do away with high rents in this city by the purchase or erection of suitable buildings. In few instances are rented buildings either convenient or at all secure for records, the loss of which would cost the Government a large sum.

In the second session, Forty-sixth Congress, the Committee on Expenditures on the Public Buildings, through its chairman, Mr. DEUSTER, submitted a report, No. 1730, in which the following words occur:

Your committee, therefore, having investigated this subject as far as possible at this time, submit these views and figures. We add that, in the opinion of your committee, it is an unwise policy on the part of the Government to pay rents from year to year that are equivalent to 5, 6, 10, and even as high as 20 per cent. of the value of the property rented.

The total amount annually expended for rented premises in all the Departments exceeds one and a quarter millions of dollars; a sum equivalent to 4 per cent. interest on more than \$31,000,000. This amount, judiciously expended, would construct several hundred handsome public buildings; enough to supply the needs of the public service for half a century to come, and put one in every important city in the Union not already supplied.

Your committee would further suggest that the inconvenience, trouble, and expense that would follow frequent or sudden removals to some extent places the Government in the power of the owners of the rented premises and endangers the safety of the public records.

Your committee would also recommend that a resolution be adopted requiring the heads of Departments and disbursing officers of the Government to adopt some system of rules and regulations in regard to renting buildings and offices that will open the door to competition, and thus avoid the payment of exorbitant and unreasonable rates.

In the face of this report of a Democratic committee in a Democratic Congress every effort to secure proper buildings for the use of the Government by purchase or construction was defeated, and rentals were continually increased at extravagant rates.

Twenty thousand dollars a year was paid during three Democratic Congresses for a building occupied by the Department of Justice and Court of Claims. It stood on about one-third of the lot known as the Freedman's Bank property; and yet when our committee at the present session unanimously reported a bill to purchase the entire property, including the building named, for \$250,000, after private parties had offered \$225,000 cash for it, the proposition was met by the most violent opposition from the leaders on the Democratic side. The property was purchased, however, and even at 4 per cent. the whole property will cost annually \$10,000 hereafter, or one-half the annual amount Democratic economy paid in rent for the building. Again, in the city of Brooklyn an average of over \$20,000 per year has been paid in rentals for twenty years to accommodate United States courts, revenue office, and post-office, in the most inconvenient and insecure way, say, in all, \$400,000, and nothing to show for it.

The Secretary of the Treasury in the Forty-sixth Congress strongly urged the construction of a building, which he said could be built for \$800,000 complete, to accommodate all those offices, but which might have been secured twenty years ago for half the cost. The bill failed, although favorably reported from committee and earnestly pressed by several members. It passed finally in the present Congress.

In the city of New York the Government purchased a piece of property twenty years ago for use as a post-office, &c., costing \$200,000, and about \$64,000 were expended upon it since in the way of repairs. The Government had the use of it, thus saving rent until a few years ago, when the new buildings were ready.

The old property was no longer useful. Several Secretaries of the Treasury had urged its sale at public auction. The committees, House and Senate, had reported well-nigh unanimously a bill to sell it under conditions that would secure its full value, which was placed at over \$600,000, and might bring perhaps a million dollars. The Secretary of the Treasury, familiar with the city, had said that in no event would the Government either use the old building or build a new one on that lot; and yet Democratic economy opposed violently the sale of that property. The conclusion seemed to be that the Government must keep property of its own in New York when it is not needed and not likely to be needed; but it shall not own property in Brooklyn, where it is sorely needed and over \$20,000 in rent annually paid.

I could cite many other instances in which the effort to secure suitable buildings for the Government, inexpensive yet convenient and fire-proof, to be owned by the Government free of taxation and extortionate rentals, was met by an effective resistance from the Democratic side of the House, many of whom seem to think that a reduction of present expenditures is necessarily economy. They lose sight of the fact that this country is rapidly peopling; that business in all the Departments is increasing steadily, demanding additional accommodations; that cities all over the land are now in the position New York was twenty years ago, with eligible lots or squares of ground that the Government should own, and not wait until rents had eaten up the value and the property had appreciated beyond reach.

The farmer who finds his flocks increasing does not hesitate to in-

crease his expenditures for sheds and barns over previous years. It is economy to provide suitable accommodations. The man who denies himself a needed roof for his house or a fence for his farm, while abundantly able to have both, lest the simple rule of addition will show a larger expenditure in that year than in preceding years, is not a wise man. It is the part of wisdom to secure the very best accommodations and conveniences at the very lowest price for the transaction of either private or public business, and I will go to the extreme of holding administrative officers to a strict accountability for the disbursement of appropriations for public buildings, as well as of all other expenditures.

The question often arises, where shall the limit be in the erection of public buildings? No absolute rule can be fixed. Population alone will not guide us. Small towns may be the geographical center for twenty counties which can hold United States courts nowhere else so well, and can seldom rent proper accommodations in such a city. Large cities can furnish rented buildings to better advantage than small ones, and yet the large cities have almost completely absorbed the appropriations for public buildings in recent years. It is not right.

The people who pay taxes and travel great distances to post-offices and to court have equal claims upon the Government for suitable accommodations. No prudent business man of ample means desires

to rent his storeroom or banking-house. If he has a reasonably permanent business he desires to have a solid, convenient business house, and gains greatly more in the respect and confidence of the community than he can possibly lose by a little extra expense possibly involved. So it is with the government of the people, for the people. They incline to respect the dignity and authority of the government that comes to transact its business in their midst in its own permanent buildings.

In conclusion let me say that my feeble efforts shall be devoted to securing the largest number of really needed public buildings at a moderate average cost and a still better system of expending the money Congress may appropriate from time to time, so that no one may have reason to doubt the prudent disbursement of all appropriations. Members of Congress locally interested have been to blame perhaps in the past for encouraging a change of plans or an increase of the limit of cost until expenditures became grossly excessive.

An amount sufficiently large to complete the building should be named in the original law as the limit of cost, and then should not be exceeded. Liberal appropriations and prompt prosecution of the work will lessen the dangers I have named.

I now submit a detailed statement of the work of our committee. The bills introduced are arranged by States. Blank spaces indicate no action:

History of all bills introduced authorizing the construction of public buildings, first session Forty-seventh Congress.

Number.	House or Senate.	United States courts or not.	Name of city or town.	Population, 1880.	Amount asked.	Amount reported by House committee.	Amount reported by Senate committee.	Passed, ultimate cost, &c.	Present appropriation.
2153	House	Yes	Huntsville, Alabama	4,977	\$75,000				
983	Senate		do		125,000				
5582	House	No	Eureka Springs, Arkansas	3,984	50,000				
1023	Senate		do		50,000

Pay of Surgeons attending the late President.

SPEECH

OF

HON. WILLIAM M. SPRINGER,
OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 14, 1882.

The House, as in Committee of the Whole, having under consideration the Senate amendments to the bill (H. R. No. 6243) to supply certain deficiencies—

Mr. SPRINGER said:

Mr. SPEAKER: The Senate amendment to the deficiency bill, now under consideration, provides for the appointment of a board, consisting of the First and Second Comptrollers of the Treasury and the Treasurer of the United States, to audit the expenses attending the sickness, death, and burial of the late President Garfield. I will ask the Clerk to read section 6 of the bill, which is the Senate amendment under consideration.

The Clerk read as follows:

SEC. 6. That a board of audit, consisting of the First and Second Comptrollers of the Treasury and the Treasurer of the United States, is hereby constituted, to whom shall be referred all claims and the determination of all allowances to be made growing out of the illness and burial of the late President James A. Garfield; that the said board shall hear, and examine, and determine all questions arising out of said claims and proposed allowances, and shall make an award in each case for services rendered, or supplies furnished, which, when received, shall be taken in full compensation of all demand whatsoever; that said board of audit shall issue a certificate, signed by each member of said board, setting forth the amount awarded to each person, and on account of what services rendered or supplies furnished, and shall transmit said certificate to the Secretary of the Treasury, who shall cause to be paid to the several persons named therein, or their legal representatives, the amount so certified; and to enable the Secretary of the Treasury to pay said awards the sum of \$57,500, or so much thereof as may be necessary, is hereby appropriated; and of this amount not more than \$35,500 in all shall be certified and paid for medical services and attendance; and in making said awards

it shall be lawful for said board to make allowances to employes of the Government for extra services in amounts not exceeding three months of their current pay: *Provided*, That no claim shall be considered and no allowance shall be made by said board on or after January 1, 1883: *And provided further*, That the aggregate amount of awards made by said board shall not exceed the amount hereby appropriated: *And provided further*, That no claim shall be considered under this section unless the person filing the same shall file a release under seal of all claims against the representatives of the late President growing out of said illness and burial.

Mr. SPRINGER. I regret that I am limited to seven minutes in the discussion of a subject of this importance. I had hoped that by having this matter considered in the House as in Committee of the Whole ample time would be given for debate.

The honorable gentleman from Ohio, [Mr. TAYLOR,] the chairman of the special committee on this subject, stated that the provisions of the Senate amendment are not satisfactory to the surgeons themselves. This bill allows them not more in the aggregate than \$35,500 for their services, to be distributed among them under the provisions of this amendment by the board of audit, consisting of the First and Second Comptrollers of the Treasury and the Treasurer of the United States, as I have stated. These physicians, it seems from the statements of the honorable gentleman, are not satisfied with \$35,500 for their important services. A single one of these physicians, a gentleman who claims to have had charge of the case, has been allowed by the committee of which the gentleman from Ohio is chairman \$25,000 as his portion, leaving but \$10,500 for all the other physicians in the case. If we have seen an unseemly quarrel with regard to the autopsy upon the dead body of Guiteau, what will be the disturbance among the physicians when the attempt is made to divide this sum of \$35,500 equitably among them, with the aid of the First and Second Comptroller of the Treasury and the Treasurer of the United States?

But the gentleman from California [Mr. PAGE] says that these services are worth all that has been recommended. I take issue with him.

Mr. PAGE. I did not make any statement of what the services were worth.

Mr. SPRINGER. I understood the gentleman to say that he would have printed some papers to show the value of the services.

Mr. PAGE. I told the gentleman a few moments ago that I needed no such statement.

Mr. SPRINGER. I understood the gentleman to say that the papers he proposed to publish did not make that statement, but that in his opinion these services were worth this money. If I am mistaken I withdraw the remark. But the gentleman has said, by the report to which he has agreed, that the services of the physicians were worth \$85,000, more than twice what this amendment proposes to pay.

I shall ask to have printed as part of my remarks an extract from the report of the special committee of this House and the views of the minority of the special committee; and also, as there has been a claim of extra medical services in this case, I shall ask to print some other statements in regard to the treatment of the case.

The following is a schedule of claims passed and allowances made by a majority of the special committee:

Allowance to Mrs. Lucretia R. Garfield of one year's salary, less payments already made.

Dr. D. W. Bliss	\$25,000 00
Dr. D. H. Agnew	15,000 00
Dr. F. H. Hamilton	15,000 00
Dr. Robert Keyburn	10,000 00
Dr. S. A. Boynton	20,000 00
Dr. Susan Edson	10,000 00
William Crump	3,000 00
E. S. S. Jennings, expenses, \$724.08; use of property, \$275.92	1,000 00
Navy Department, expenses	2,225 40
Navy Department, expenses of Marine band	527 00
William R. Spear, undertaker	1,835 50

The foregoing allowances were not made with the concurrence of a majority of the special committee. A minority report was submitted, as follows:

VIEWS OF THE MINORITY.

The undersigned, members of the special committee authorized to audit certain expenses growing out of the sickness and burial of the late President Garfield, respectfully dissent from the report of the majority of the committee for the following reasons: We do not object to the payment by the General Government of the funeral expenses of the late President, who was stricken down in the performance of his duties and because of his occupying a public station. Our objection to the report of the committee grows out of the recommendation for payment for the services of the physicians and surgeons who attended the late President during his illness. The amounts recommended to be paid by the majority of the committee are as follows: to Dr. D. W. Bliss, \$25,000; to Drs. Hamilton and Agnew, \$15,000 each; to Drs. Keyburn and Boynton and to Mrs. Dr. Edson, \$10,000 each, making a total for professional services of \$85,000.

In addition to this the committee recommend the promotion of Drs. Barnes and Woodward with increased pay in accordance with their promoted rank. There was no evidence before the committee, *ex parte* or otherwise, tending to establish the character of the services rendered or the value of such services. The undersigned were perfectly willing to concede that liberal compensation should be allowed to the physicians and surgeons, a compensation in excess even of what it were possible for any of the medical attendants to have earned in ordinary practice during the time, but the sums recommended to be paid by the majority of the committee are deemed by the undersigned to be excessive and out of proportion to the services rendered.

No accounts or bills were presented by any physician or surgeon, with perhaps one exception. No witnesses were called, no evidence by affidavit or otherwise submitted upon which the committee could base its finding. The conclusion reached by the majority of the committee was therefore based upon such information as had been derived from reading the newspapers, and does not differ in the least from that which every gentleman possesses who pays any attention to the news of the day. The undersigned were of the opinion that there was no extraordinary medical skill exhibited in the treatment of the case, and nothing calling for an extraordinary allowance for professional services; but, while willing to be liberal, they could not consent to the manner of payment recommended, nor to extravagance and wanton lavishment of the public funds.

The undersigned also respectfully protest against that part of the report of the majority which recommends the promotion of Surgeon-General Barnes to a major-general's rank, and retirement thereunder, and to the recommendation for promotion of Dr. Woodward from a major to a lieutenant-colonel, with rank and pay of the latter office. The undersigned are of the opinion that this committee has no jurisdiction to make any recommendation with regard to the military establishment. The committee could only consider such matters as were referred to them by the resolution of the House. The resolution authorized us to audit certain expenses, and not to recommend promotions in the military service of the Government.

There is no precedent, so far as we have been able to learn, for Congress assuming to pay for the services of physicians attending upon persons in civil positions; but in view of the circumstances of the assault upon the late President, and of the great interest of the people in his recovery, the undersigned were willing that the Government should assume to pay such sums for professional services as might lawfully have been recovered from the estate of the late President, and were desirous of treating such claims as claims against the estate of the deceased rather than as properly cognizable by Congress. They were willing, therefore, to appropriate to the estate such portion of the unearned salary of the late President as would cover all such claims; but they cannot agree that sums shall

be appropriated for professional services far in excess of the value of such services, and which sums are bottomed upon claims not formally presented, and supported by no evidence as to the value of the services rendered. For these reasons the undersigned respectfully protest against the passage of the bill reported by the majority of the committee, and recommend the adoption of the following resolution:

Resolved, That the report of the majority of the committee, together with the bill accompanying said report, be recommitted with instructions to the committee to require all persons having claims cognizable by said committee to present accounts thereof, and to require claimants in all cases to furnish proof as to the value of services rendered or material furnished; and in the case of allowances for professional services as physicians or surgeons to make such allowances only as would be properly chargeable to and provable against the estate of the late President, and to provide in the bill when again reported such further appropriation of unearned salary as would cover the amounts audited for such professional services.

All of which is respectfully submitted.

JO. C. S. BLACKBURN.
WILLIAM M. SPRINGER.
BENJAMIN LE FEVRE.

As I signed these views of the minority of the special committee, I may say that they concisely state my opinion on the subject. I do not know that I could make myself better understood or enlighten the House by a further statement.

Mr. Speaker, I have seen no evidence that extraordinary medical skill was exhibited by the physicians. It was disclosed by the autopsy in the President's case that these physicians treated to the day of his death a pus cavity as a gunshot wound, and that pus cavity the result of malpractice in the case at the very beginning. It has also been charged in the public press, and I have seen no denial of it, that certain brokers in Wall street were advised from day to day by cipher telegrams of the true condition of the President, these statements differing from the statements of the official bulletins. In this connection I will ask to have printed as part of my remarks a telegram from Washington City, which was published in the Chicago Inter-Ocean of August 25, 1881, and also in the New York Herald of the same date, showing the condition of the stock market at the time the President was lingering in this city, and the nature of the bulletins that were being published at the time giving what purported to be a true account of his condition. The article is as follows:

[Dispatch published in the Chicago Inter-Ocean, and New York Herald, Thursday, August 25, 1881.]

WASHINGTON, D. C., August 24, 1881.

For some time it has been rumored that some one on Wall street had means of knowing the condition of the President and what was going on at the White House, that were denied to the public. This evening that this is true can be no longer contradicted, for it is positively known that before some members of the President's family were aware of the intention to summon Dr. Agnew here for a consultation as to the removal of the patient, some one in New York had the information. It is not certainly known when the physicians formed the determination themselves, but it could not have been very long since, because Dr. Agnew returned to Philadelphia only yesterday, where he was known to have been last night, an interview with him appearing in the local press this morning.

It is said that Dr. Bliss telegraphed for him at 9.40 this morning, but whether that is true or not only an inspection of the files at the telegraph office would prove. It is thought not unlikely, however, that this is the time at which the summons was sent, although it does not follow that consultation had not been had before with reference to the matter. At any rate, it is clear that by noon it was known, and variously interpreted on Wall street. That it was kept a profound secret here will be appreciated when it is known that Dr. Boynton, the President's cousin, and Mrs. Garfield's physician, and the most confidential friend of the family, was actually from 9.30 o'clock to 11.30 o'clock to-night at a newspaper office, revising an interview for publication in the morning, and he was not aware that Dr. Agnew was expected, or that the Cabinet had been told to wait until he came for his decision as to whether the President should be removed or not. He did not know that the Cabinet had not departed as usual an hour and a half before he left the newspaper office. Aside from the doctor's statement that he knew nothing about it until told near midnight, is the extreme improbability of his being absent from the White House when business of such grave moment was pending, a movement which might prove immediately fatal or might insure the recovery of a man whom he loves as a brother. Still, although Dr. Boynton was loitering in a newspaper office, unconscious of what was going on, Wall street had known of it at noon.

Another circumstance that adds a link of evidence to show that some one who had special means of knowledge as to the patient's condition is employed in furnishing the information to stock-jobbers, is the fact that three days ago a man appeared here and told several persons that he had come to make arrangements for a direct wire from the White House to a broker's office in Wall street, but he found that he had been forestalled. He offered to prove by files at the Western Union telegraph office that it was a fact that dispatches went directly from the White House to Corbin's place in New York, a banker broker's office. This gentleman said that he would give \$10,000 to know five minutes in advance that the President was dead.

If more convincing proof is needed it only remains to give the cipher by which it is believed communication is carried on between a person who has special facilities for knowing the patient's actual condition and certain other persons on Wall street. It is not asserted that the key given below embraces quite all of the code, but there is enough given to show that some one is trafficking upon the life or death of the nation's patient. The cipher is as follows, being literally transcribed so far as known at this hour:

1. Harry will mean that he is improving.
2. Mary will mean, he is improving nicely.
3. H. G. will mean he is failing.
4. Frank will mean he is failing rapidly.
5. New York will mean he is holding his own.
6. N. J. will mean he will probably die.
7. S. D. will mean he will surely die.
8. D. K. B. will mean he will undoubtedly recover.
9. John will mean he will surely recover.
10. Bates will mean he is gaining.
11. Sam will mean he is gaining strength.
12. Jersey City will mean do not credit reports.
13. Brooklyn will mean there is no danger.
14. Washington will mean he is out of danger.
15. It is not clear what is meant by No. 15.

There is reason to believe that No. 12 has been sent more frequently than any of the others.

That telegram appeared in two of the leading newspapers of the country at the date stated. I have seen no contradiction of the serious charges made in it, nor do I believe any has been made. The article was written by Mr. Byron Andrews, of the Inter-Ocean, one of the most honorable and reliable of Washington correspondents. These statements demand investigation. If any physician in the case is responsible directly or indirectly for the publication of false bulletins as to the President's condition while secret cipher information was sent to Wall street giving his true condition, instead of allowing compensation, we should instruct the district attorney to institute proceedings in the courts looking to punishment of the guilty parties.

I shall also ask to have printed as part of my remarks a paper signed by Dr. Boynton, who was in attendance upon the President, and approved by Mrs. Garfield; and in connection with this the testimony of Dr. Bliss in the Guiteau trial as to the manner in which he was brought into the case. The papers referred to are as follows:

[New York Tribune of April 26.]

MENTOR, OHIO, October 14, 1882.

This certifies that on or about August 8, 1881, the late President, James A. Garfield, made the following statement to me in presence of Mrs. Garfield, namely: That Dr. J. H. Baxter had been his physician for many years, and that he still considered him as his physician. He also stated that he had no knowledge of ever having placed himself under the professional care of Dr. D. W. Bliss, and he did not believe Dr. Bliss had ever spoken one word to him upon the subject.

Mrs. Garfield stated at the same time that she had never been consulted by Dr. Bliss upon the subject, and had no knowledge of the President having chosen Dr. Bliss as his attending surgeon.

S. A. BOYNTON, M. D.

Indorsed, as follows, by Mrs. Garfield:

MENTOR, OHIO, October 24, 1881.

I have read the statement of Dr. Boynton made to-day, and will say that it is entirely correct.

LUCRETIA R. GARFIELD.

DR. BLISS'S OWN STATEMENT.

[Testimony in the Guiteau trial, November 19, 1881. Dr. Bliss under cross-examination by Mr. Scoville.]

Question. Who called you to attend this case?

Answer. The Secretary of War sent for me.

Q. When?

A. At the time of the shooting; within a few minutes after it his carriage came for me.

Q. Did you find any physician there when you arrived?

A. Yes, sir; I did. There were two physicians.

Q. Who were they?

A. Dr. Tewshend and Dr. Purvis.

Q. After the President was removed to the White House who then requested you to stay or to take charge of the case, if any?

A. Do you mean the day of the shooting?

Q. Yes.

A. There was nothing said about it that day.

Q. When was there anything said about it?

A. The next morning.

Q. Who then made such a request?

A. The President.

Q. Any one else?

A. No one else. Mrs. Garfield and the President and myself were together.

Q. That was all?

A. That was all.

Commenting on the foregoing, a distinguished gentleman recently said:

I leave that testimony to be determined by the credibility of the gentleman who makes this claim, by the wife of General Garfield, and by the statement of his most intimate medical and personal friend, and I think I am authorized by these facts in stating that Dr. Bliss, the principal recipient of this bounty, was a volunteer in the case, and that he is entitled simply to payment on a *quantum meruit*, and upon that basis and that alone.

I had hoped I would be permitted to comment on each of these papers; but I cannot do so in the limited time allowed me. They show that the chief physician in this case was a volunteer, and continued in the case to the end without the consent of the President or of his family. That he kept the other physicians from knowing the true condition of the President was exposed on more than one occasion during the progress of the case. In many instances the official bulletins were known to be false; and if they were reread to-day, in the light of the autopsy and subsequent events, they would appear ridiculously false and unaccountably stupid.

The wife and family of the dying President were never informed of the danger approaching, nor was the unfortunate victim given any intimation of his approaching dissolution. Who can tell what advice, suggestion, or dying blessing he may not have desired to give his afflicted wife and disconsolate children? His pastor was not allowed to see him and administer the consolation of religion before he was ushered into the presence of his Maker. As he fell on the fatal day of his wounding, so he passed from this world into eternity. It is the universal prayer of his countrymen and civilized people throughout the world, that he may rest in peace. But no physician in attendance ever thought it worth while to give him the consolation of assurance in the hour and article of death that although he must die here he should live again in the great hereafter.

It is said that the public sentiment of the country demands that Congress should liberally compensate the President's physicians. I do not so understand it. The Saint Louis Globe-Democrat, one of the leading Republican papers of the country, in an editorial article

on the 21st of April last, in speaking of the recommendations of the special committee of the House, said:

The only reason that the sums recommended are as large as they are is that there prevails a tacit impression that the Government ought to pay more for what it gets than any one else. This is wrong in principle, and lies at the root of most of the public extravagance that exists.

The minority report of the committee assumes that the Government should pay whatever President Garfield's estate is liable for, placing a liberal construction upon the amount. In this view it will be supported by those who give the matter thought. Any other conclusion argues a careless regard for the public money. The fact that President Garfield was the patient and that he was assassinated does not take away the business character of the remuneration; it simply furnishes ground for the Government to assume the indebtedness and relieve the late President's estate from any claim against it on that account. It would be well for Congress simply to ask the creditors how much is due them, and, if there is no marked attempt at gouging, to order it paid. Probably Drs. Agnew, Hamilton, Bliss, and others can control their feelings sufficiently to comply with the request, with the understanding that the money will come from the national Treasury.

Gentlemen will find when they return to their constituents that the Globe-Democrat has correctly reflected public sentiment on this subject. And in this matter public sentiment is based upon a just and fair principle which should govern all legislative bodies. We are frequently appealed to to be liberal, and I too often see a disposition to be liberal—liberal in disposing of other people's money. What is required of us is to be just to all concerned, to the tax-payers and the tax-consumers. The sums proposed to be paid to the President's physicians are beyond all reason and far in excess of what would be paid if a private individual had been treated and paid his own bills. If extraordinary skill had been shown, and a life had been saved which the country could ill afford to lose at the time, I should favor appropriations commensurate therewith; but no such services have been shown in this case.

I have dealt as mildly with the subject as it is possible under the circumstances. If I have failed to properly characterize the conduct of the physicians and the incompetency evinced at every stage of the case, it is not from want of feeling or indifference to the treatment of the late President. I may say, however, in contemplating the dead body of Garfield, in view of "the deep damnation of his taking off," as was said by Mark Antony over the body of Caesar:

Pardon me, thou bleeding piece of earth,
That I am meek and gentle with these butchers.

Appropriations.

SPEECH

OF

HON. JOHN D. C. ATKINS,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, August 5, 1882.

The House having under consideration the bill (H. R. No. 6716) making appropriations for the sundry civil expenses of the Government for the fiscal year ending June 30, 1883, and for other purposes—

Mr. ATKINS said:

Mr. SPEAKER: The duty of providing ways and means for the support of the Government devolves upon Congress, and the Constitution especially invests the House of Representatives with the prerogative and duty of defining the limits of taxation, hence the practice of the origination of appropriation bills in that body. But the expenditure of the moneys thus appropriated is committed by the direction of Congress to the Executive Departments of the Government. Congress then appropriates and the Administration in power at the time expends the public moneys. Congress is responsible for the appropriations, but the Administration is responsible for their expenditure.

As this conference report is now under consideration, that the House may compare this sundry civil bill with other sundry civil bills, I will here give the amount of each of these bills for the last eleven years. In 1873 the sundry civil bill of that year amounted to \$20,148,413.90, in 1874 it amounted to \$32,186,139.09, in 1875 it was \$27,009,744.81, in 1876 it was \$26,644,350.09. This period the Republicans were in the majority in Congress. In 1877 the Democrats came into power, and for that year the sundry civil bill amounted to \$16,351,474.58, in 1878 it was \$17,133,750.06, in 1879 it was \$24,750,100—but it was the bill of that year that contained the fisheries award under the treaty of Washington of \$5,500,000. Subtracting that sum, which was unusual, and the sundry civil bill of 1879 would have been \$19,250,100. In 1880 it was \$17,634,868.56, in 1881 it was \$22,503,508.23, in 1882 it was \$22,092,194.12. These six years the Democrats were in the majority. And the present bill amounts to \$25,589,358.06. The study of these figures will show at a glance that those bills under Democratic rule were much less than under Republican majorities.

I now invite the attention of the House to a table which will exhibit in detail the fourteen appropriation bills, the last of which is now about to be passed. I also include in the table the amounts contained in the same bills for the last fiscal year ending June 30, 1882, and for the purpose of comparison I have extended the table so as to embrace, in addition, the appropriations from 1873 to 1881 inclusive. This table is carefully compiled from the official records of this House, and is reliable and accurate. In preparing this table I have had it made up so as to embrace the deficiencies that are passed at the same time the other appropriations are made; in other words,

instead of carrying back the deficiencies to each preceding year, I have counted them along with the other appropriations made at the same session, so as to show how much is appropriated in the grand aggregate at each session or during each term of Congress.

I invite your special scrutiny and study of this table, as it presents in a compact form the whole history of appropriations by Congress for the last eleven years, and presents in striking contrast the economy of the Democrats in comparison with that of the Republicans during the periods respectively that they had control of the House of Representatives.

TABLE A.—Appropriations made by Congress during the fiscal years 1873, 1874, 1875, 1876, 1877, 1878, 1879, 1880, 1881, 1882, and 1883.

RECAPITULATION OF TABLE A.

Average per annum appropriations, exclusive of pensions and deficiencies, from 1873 to 1876, inclusive.	\$146,692,333 44
Average per annum appropriations, exclusive of pensions and deficiencies, from 1877 to 1882, inclusive.	130,807,432 71
Average reduction per annum during years 1877 to 1882 over years 1873 to 1876, inclusive.	15,884,900 73
Average per annum appropriations, exclusive of pensions alone, from 1873 to 1876, inclusive.	153,533,010 79
Average per annum appropriations, exclusive of pensions alone, from 1877 to 1882, inclusive.	135,811,962 82
Average reduction per annum during years 1877 to 1882 over years 1873 to 1876, inclusive.	17,721,047 97
Increase of appropriations for 1883 over 1882.	78,554,565 61
Increase of appropriations for 1883, exclusive of pensions, over same for 1882.	30,836,872 29
Increase of appropriations for 1883, exclusive of pensions and deficiencies, over same for 1882.	29,136,478 33
Increase of appropriations for 1883, exclusive of pensions, over average for same during years 1877 to 1882, inclusive.	43,436,980 93
Increase of appropriations for 1883, exclusive of pensions and deficiencies, over average for same during years 1877 to 1882, inclusive.	35,194,314 08

It seems, Mr. Speaker, that the appropriations at the present session of Congress aggregate \$295,248,943.75, not including the Geneva award, which I believe was about \$11,000,000. However, that is an extraordinary and unusual appropriation, and should not, I will admit, be counted in the general aggregate of the appropriations for this session.

The sum I have named is much larger than the amount appropriated at the last session of the Forty-sixth Congress, which was \$216,694,378.53. I am now speaking simply of the appropriations for current expenditures, including pensions, deficiencies, and miscellaneous appropriations. I am aware that it is often contended that deficiency appropriations should be carried back to the account

of the preceding year. My remarks are being submitted upon the basis of each year's appropriations, embracing deficiencies and treating them as a part of the grand aggregate, and as though they belonged to the same fiscal year for which the other appropriations are made, and is the fairest method of treating them. Comparing the aggregate appropriations of this session with the aggregate appropriations of the last session of the Forty-sixth Congress, there is for this session an excess of \$78,554,565.61.

Mr. HOLMAN. Does that include miscellaneous appropriations?

Mr. ATKINS. It includes everything except the Geneva award of \$11,000,000. If we exclude pensions the appropriations at this session show an excess of \$30,836,872.29, and if we exclude both pensions and deficiencies the appropriations of this session exceed those of the last session of the Forty-sixth Congress \$29,136,478.33.

Mr. HOLMAN. That includes miscellaneous appropriations?

Mr. ATKINS. Of course it does. The miscellaneous appropriations of this session of Congress are much larger than at the last session. At this session they have amounted to \$5,420,385.29 including the appropriations made to-day, for instance, the appropriation made for the estate of Mr. Forney, former Secretary of the Senate, and the \$50,000 for the public building at Fort Wayne, Indiana.

In the very nature of things it is next to impossible for Congress to accurately anticipate the wants of the Government. The country is too large, its interests too many and too varied to admit of absolute exactness in estimating for its necessities; hence to a greater or less extent there will be deficiencies. But these deficiencies have become of late years quite a factor in the financial budget of this country. They depend greatly upon the fidelity and economy of the Administration or upon their unfaithfulness and extravagance.

Mr. HOLMAN. Were not many of the items in the deficiency bill this year merely appropriations for the current year, and not for previous years?

Mr. ATKINS. So far as that is concerned, to be very frank, some of the deficiency appropriations made this year should no doubt date

back to the last year. But in my judgment vastly the greater portion of deficiency appropriations of this year are justly chargeable to this year for the reason that in my opinion they are not legitimate deficiencies. A legitimate deficiency in my view is where there is a failure on the part of Congress to make a sufficient appropriation to meet the demands which the law of Congress requires. For instance, we have two hundred and ninety-three members of this House and eight Delegates. Their salaries are fixed by law. Their mileage and their allowance for stationery are fixed by law. If we appropriate too little money to pay our salaries, our mileage, and our stationery allowance, it is a legitimate deficiency because Congress has failed to make a sufficient appropriation to meet the demands required by law.

But if Congress fails to make an appropriation sufficient to meet the demands of the Executive Departments in the administration of their miscellaneous and contingent fund; for instance, by way of illustration, I hold it is not a legitimate deficiency, but it is a debt which is incurred by the unwarranted action of the officers of the Government. In that respect lies the difference between many of the deficiencies, some of which are legitimate, while others are not.

Mr. HOLMAN. Does not that also refer to some of the items for the Navy?

Mr. ATKINS. I think so. I believe the appropriation of \$300,000 for the repair of the flag-ships Lancaster and Brooklyn clearly come under the head of simple debts incurred by the Government in violation of the spirit and intention of Congress. In making provision for the Bureau of Construction and Repair Congress appropriated \$1,500,000 for that bureau, and it distinctly stated that \$300,000 of that amount should be used for the repair of those vessels; but instead of that the Bureau of Construction and Repair expended the whole \$1,500,000, and then \$300,000 more, and came back and asked Congress to supply that latter amount as a deficiency. I deny that it was in any sense a legitimate deficiency, and this statement, Mr. Speaker, illustrates millions of dollars of so-called deficiencies.

The whole deficiencies of this session amount to \$29,212,682.26, \$16,000,000 of which are for pensions and pension arrears.

I have not time to point out the numerous instances of such unlawful deficiencies annually incurred by wasteful and extravagant and it may be corrupt officials in charge of public revenues, in defiance of the plain-written statutes of Congress forbidding such practices. Their exposition would furnish ample material for a speech much longer than I design this to be—a speech at some proper time, I trust, some member will deliver upon this floor. There is no more inviting field. When it is done the Department or bureau of this Government which shall escape just condemnation for its open violation of law will receive, as it will be entitled to, the commendation if not the thanks of Congress.

Fixing, then, in your mind, Mr. Speaker, the nature of a lawful deficiency and in what respect it differs from a debt of the Government unlawfully incurred, it remains for me to say that Congress is responsible for the former and the Administration is responsible for the latter. And as the power is vested in Congress alone, with the approval of the President, to say how much money and for what purpose it shall be expended, it follows that any excess of expenditure incurred by the Administration unless in pursuance of laws enacted by Congress and the limitations thereof is not only unlawful but a gross usurpation.

It is fair to conclude that when Congress makes appropriations that it knows what it is about, and that it means what it says; that is, that the expenditures must be circumscribed by those expressed limits; otherwise Congress, which represents the people, lays and collects taxes and appropriates the revenues for the uses of the Government, is sovereign in these respects in theory only, but is in fact the mere puppet to do the bidding of a selfish, usurping, and extravagant bureaucracy, run by subaltern clerks.

Many of these deficiency bills are not regular deficiencies, but are expenditures incurred by Government officials without authority of law.

Section 3678, Revised Statutes, reads thus:

All sums appropriated for the various branches of expenditure in the public service shall be applied solely to the objects for which they are respectively made and for no others.

Now, will any one pretend to claim that moneys appropriated for miscellaneous and contingent funds of the various bureaus, for the maintenance of the Navy and of the Army, and for many other branches of service shall be or can be lawfully diverted to the employment and payment of clerks and other employés, as has been the common practice in some of the Departments, thereby necessitating an insufficiency of the appropriation for the purpose specified in the appropriating act; and I submit it is fair thus to act as some of the Departments and bureaus have done and then come before Congress asking for deficiencies brought about not by complying with but by violating the law? And is it the duty of Congress to encourage these violations of the statutes and the creation of deficiencies, whether lawful or unlawful, by a too ready yielding and granting their requests? Is not our readiness to give an incentive to them to ask? Thus many unlawful expenditures are incurred in violation of law, contracts are entered into in excess of appropria-

tions, and when the money gives out straightway great deficiency estimates are sent in for Congress to provide payment, whereas had the Departments observed the statute forbidding the contracting for any service or thing until an appropriation has first been made by Congress for that particular object, there would of course be no deficiencies.

That the country may not be confused by this talk about deficiencies and pensions—subjects, however, which ought to be closely and critically understood by Congress and the people—allow me to again refer to the above table. The appropriations for all purposes for 1881 are \$189,328,222.64, pensions \$41,644,000, leaving \$147,684,222.64 for net ordinary. Now, take deficiencies from that sum, which were \$6,118,085, and we have \$141,566,137.64, for 1881.

The whole sum appropriated for 1883 is \$295,248,943.75. Excluding pensions and pension deficiency, \$116,000,000, and other deficiencies, \$13,212,681.26, and we have for 1883, the appropriations being made at this session, \$166,000,749.79, for net ordinary expenditures, or \$24,434,612.15 in excess of the net ordinary appropriations for the fiscal year ending June 30, 1881, and \$29,136,478.33 in excess of the net ordinary appropriations for the year ending June 30, 1882, or \$34,214,102.68 in excess of the net ordinary appropriations of the fiscal year ending June 30, 1880, which were \$131,786,647.11 exclusive of pensions and deficiencies. At the same rate of appropriations for 1884, the Forty-seventh Congress, Republican, exclusive of pensions and deficiencies, will have appropriated in round numbers, \$58,000,000 more money to defray the net ordinary expenditures of the Government than was appropriated by the Forty-sixth Congress, which was Democratic.

Thus it will be seen that the Republican party in administering the Government, exclusive of pensions and deficiencies, appropriates about 20 per cent. more money than the Democrats have done for the same purposes; this, too, with the great advantage of being in accord with the Administration, for if the Democrats of the House, showing as they have their disposition and power to retrench expenditures, had the advantage of a Democratic administration intent upon retrenchment and reform, as it doubtless would have been, the facilities thereby afforded for curtailing public expenditures and lessening annual appropriations, cutting off useless service and unlawful deficiencies and otherwise reforming the civil service, would have largely reduced the annual budget, thereby adding to our surplus to be applied to the extinction of the national debt, or by that sum to have diminished the taxes of the people.

The natural growth of the Government is something I admit, but unfortunately for our Republican friends the Democrats practiced an economy in the Forty-fourth and Forty-fifth Congresses amounting to \$85,855,136.54, or \$21,463,783.13 average per annum—in the face of a Republican administration—less than the Republicans appropriated in the Forty-second and Forty-third Congresses, and the disadvantage of the growth of the Government was against the Democracy in this calculation. I excluded the fisheries award in 1877 of \$5,500,000 just as I have excluded the Geneva award at this session of \$11,000,000 as extraordinary and unusual. And again, taking the last session of the Forty-sixth and the first session of the Forty-seventh, the difference is \$29,136,476.33 in favor of the economy of the Democrats.

Why should it cost \$25,000,000 on an average annually more under a Republican than under a Democratic House of Representatives to administer the Government? As I have before intimated the Republicans are more prone to yield to the demands of a Republican administration in excusing violations of the laws and allowing larger and questionable deficiencies. As for instance the Democrats allowed in 1879 and 1880 each about \$5,500,000, and in 1881 between seven and eight millions, carrying back the deficiencies to each year respectively, not including pension deficiencies, while the Republicans, exclusive of pension deficiencies, have in 1882 allowed \$13,212,681.26.

That the public may not be misled or confused in their understanding as to the amounts of deficiencies appropriated for by Congress, I will give them for the last eleven years as shown by table A, which is taken from the laws of Congress and the records of the House itself: deficiencies allowed in 1873 were \$6,596,677.39; in 1874, \$12,978,418.60; in 1875, \$4,083,914.26; in 1876, \$4,703,699.18, and in 1883, \$13,248,193.96; aggregating \$41,609,904.39. During each of these years the Republicans had control of Congress. For the six years, between 1876 and 1883, exclusive, the Democrats had control of the House and a part of the time the control of the Senate. The deficiencies allowed in 1877 were \$2,908,177.09; in 1878, \$2,745,480.97; in 1879, \$11,962,013.02; in 1880, \$4,633,824.55; in 1881, \$6,118,085; and in 1882, \$5,124,046.65; aggregating \$33,391,627.28, or \$8,618,277.11 less in six years appropriated for deficiencies by the Democrats than were appropriated by the Republicans in five years.

Or, in other words, the Democrats appropriated for the six years they had control of the legislation on an average, per annum, the sum of \$5,565,271.21, while the Republicans appropriated on an average, per annum, the sum of \$8,321,980.88; no pension deficiencies are included in either of the periods.

Below I give a table showing the larger deficiencies allowed during this session, very few of which can be justly called a deficiency in the sense of the word as before explained; and the remaining six or seven millions allowed are in the main far less entitled to be

classed as legitimate deficiencies, as they, like many of these, were made in excess of authority and outside of law:

TABLE B.—*Deficiencies provided for on account of the fiscal year 1882.*

Compensation of postmasters.....	\$1,192,206 88
Transportation by railroads.....	1,120,000 00
Miscellaneous postal service.....	75,144 35
Naval service.....	425,407 04
Indian service.....	1,036,881 67
Pensions.....	16,000,000 00
Army.....	520,000 00
Public printing and binding.....	865,000 00
Fish and fisheries.....	82,001 45
Tenth census.....	620,000 00
Expenses of United States courts.....	253,056 78
Internal-revenue service.....	380,000 00
Mints and assay offices.....	53,418 00
Expenses of Congress.....	85,273 01
Pension Office.....	73,900 00
Patent Office.....	44,911 79
General Land Office.....	25,000 00
Total.....	22,852,200 97

After this showing it is very plain that deficiencies are much larger under Republican than under Democratic rule; and the only way to account for the excess must be from the fact that the Departments are less careful, more extravagant, and more confident of having their demands satisfied by a Republican than by a Democratic Congress.

But knowing that our Republican friends will seek to cover their extravagance behind the familiar and popular defense of pensions, and would have the public believe that the increase of expenditures under their administrations is to be attributed to the extraordinarily large sums paid for pensions, I propose to strip the issue of all expenditures for pensions in every form, and then to see how the account stands between the two parties. With this view I produce a table carefully prepared from the records of the Treasury Department, excluding pensions and interest:

TABLE C.—*Per capita net ordinary expenditures of the Government, exclusive of pensions and interest, for the fiscal years 1858 to 1861, 1873 to 1876, and 1879 to 1882.*

Years.	Estimated population.	Total net ordinary expenditures, exclusive of pensions.	Per capita expenditure.
1858.....	29,703,032	\$71,110,668 87	\$2 38
1859.....	30,618,176	65,133,727 36	2 12
1860.....	31,443,321	58,955,952 39	1 87
1861.....	32,064,000	61,581,456 05	1 95
1873.....	41,676,000	151,129,210 94	3 62
1874.....	42,795,000	165,080,570 34	3 83
1875.....	43,949,000	141,073,632 05	3 21
1876.....	45,135,000	136,600,417 67	3 02
1879.....	48,863,000	126,498,452 14	2 58
1880.....	50,155,783	113,312,887 81	2 26
1881.....	51,462,000	127,083,618 01	2 47
1882.....	52,799,000	125,559,038 83	2 37

Average per capita for the four years from 1858 to 1861, inclusive..... \$2 08
 Average per capita for the four years from 1873 to 1876, inclusive..... 3 42
 Average per capita for the four years from 1879 to 1882, inclusive..... 2 42

Thus it will be observed that the entire expenditures, excluding interest and pensions, as shown by this table, for the per capita expenditures under a Republican administration is from 20 to 25 per cent. greater than under a Democratic administration, whether before or since the war. The luxury of Republican rule costs that much more than under Democratic rule. Whether it be appropriations or expenditures, whether in the grand aggregate or in analytical detail, whether collectively or per capita, whether before or since the war, that fact is clearly established.

Another reason for Republican extravagance arises out of the constant and gradual increase of salaries and the creation of new offices and the grading-up of clerical positions.

That there may now and then be a just necessity for the increase of a salary I will not deny. There are some very laborious and over-worked positions, with inadequate salaries it may be, while there is a large percentage much too high-gauged by the labor performed; but to equalize them so as to affix to each just compensation would be a task of great difficulty, labor, and perplexity. The whole number of clerks carried in the legislative, executive, and judicial appropriation bill is 7,745. The net increase over last year is 1,590. Of that increase 1,210 are for pensions, the remainder (380) are for other Departments.

The force is increasing in a larger ratio than are the revenues. As the Post-Office Department is one of constant growth and ramifies itself into all of the political and social relations of the people, any statistics in reference to it are eagerly sought and appreciated.

The following table will show the percentage of increase in clerical force, the percentage of cost of such force, and the percentage of actual increase in revenues for 1882 over 1881, and the estimated increase of 1883 over 1882:

POST-OFFICE DEPARTMENT.

Increase in number of clerks and others in 1882 over 1881, 7½ per cent.
 Increase in cost of force for 1882 over 1881, 7½ per cent.
 Actual and estimated increase in revenues for 1882 over 1881, 13½ per cent.
 Increase in number of clerks and others for 1883 over 1882, 10½ per cent.
 Increase in cost of force for 1883 over 1882, 10½ per cent.
 Estimated increase of revenues for 1883 over 1882, 8 per cent.

It will be observed that the percentage of clerical force and cost of same for 1882 over 1881 is considerably less than the percentage of increase in revenues, being 7½ of force and 7½ in cost of force to 13½ per cent. of revenue, while the rate per cent. of number and cost of clerical force as provided by the current legislative, executive, and judicial appropriation bill for 1883 over 1882 is about 11 per cent. to 8 per cent. increase in the revenues. Now I leave these figures to point their own moral. It is the repetition of the same idea. It results from increase of force and increase of salaries above the ratio of the increase of revenues. In this connection I publish as a part of my remarks the following letter from Postmaster-General Howe:

OFFICE OF THE CHIEF CLERK TO THE POSTMASTER-GENERAL,
 Washington, D. C., July 20, 1882.

SIR: In reply to your dispatch to the Postmaster-General, he directs me to say that the postal receipts for the nine months ended March 1, 1882, amount to \$31,067,343.65. The receipts for the quarter ended June 30 are not ascertained, the accounts being in process of adjustment by the auditor. A careful estimate places the receipts for the entire fiscal year at \$41,772,000. This is an increase of 13.5 per cent. over receipts for the year ended June 30, 1881.

Very respectfully,

F. H. HOWE, Chief Clerk.

HON. J. D. C. ATKINS,

House of Representatives, Washington, D. C.

This table and these figures show that somehow or other expenditures under a Republican House exceed those under a Democratic House, no matter in whatever branch of public service we look.

In analyzing expenditures in different branches of the public service it is curious to see how the expenditures under a Democratic House of Representatives fall below those under a Republican House, as the following table, compiled from tables of revenue and expenditures, furnished me by the Treasury Department, and therefore official, shows:

Civil and miscellaneous:	
1873-'74-'75-'76, (Republican).....	\$280,998,779 84
1877-'78-'79-'80, (Democratic).....	229,884,855 42
Difference in favor of Democrats.....	51,113,924 42
War Department:	
1873-'74-'75-'76, (Republican).....	167,828,000 15
1877-'78-'79-'80, (Democratic).....	147,779,460 70
Difference in favor of Democrats.....	20,048,539 45
Navy Department:	
1873-'74-'75-'76, (Republican).....	94,019,780 30
1877-'78-'79-'80, (Democratic).....	60,987,248 31
Difference in favor of Democrats.....	33,032,531 99
Indians:	
1873-'74-'75-'76, (Republican).....	28,995,381 96
1877-'78-'79-'80, (Democratic).....	21,055,852 67
Difference in favor of Democrats.....	7,939,529 29

In 1857-'58-'59-'60 the total customs amounted to \$208,418,862.26. We had no internal revenue then.

Thus it will be observed that in four years the Republicans expended in civil and miscellaneous expenditures \$51,000,000, in the War Department \$20,000,000, \$33,000,000 in the Navy, and in the Indian Bureau \$8,000,000 more than was expended when the Democrats had control of the House of Representatives. That the growth of the country is a justifiable answer for these increased appropriations under Republican rule, and that this apology to cover their extravagance is fallacious, I quote from a speech I delivered in this House on the 15th of June, 1880, commenting upon a table prepared from the finance report of 1879 and from the records of the Treasury Department relating solely to expenditures and published in the CONGRESSIONAL RECORD of that date. I then commented as follows:

Thus it will be seen that, tried by the per capita cost of administration, the three years preceding the war the average per capita expenditure per annum was \$2.17, while for the years 1874, 1875, and 1876 it was \$4.01, and for 1877, 1878, and 1879 it was reduced to \$3.03. The last year of Mr. Buchanan's administration the expenditures fell to \$1.91 per capita per annum.

The table included expenditures for the payment of pensions. At that time there was no interest, or practically none.

Now, the estimates found in the Book of Estimates for the fiscal year ending June 30, 1883, amount to \$255,219,190.83, being less than the amount appropriated by the enormous sum of \$41,162,149.50. It may be remarked that the appropriations exceed the estimates for the first time in many years. In order that the country may arrive at a correct idea of the appropriations made by the Republicans and

Democrats respectively, I will show the amounts appropriated for all purposes, exclusive of pensions, for the four years preceding the advent of the Democrats to the control of the House of Representatives in 1877, and the four years they held the majority in that body, including deficiencies and carrying them back to each preceding year. In 1873 the appropriations were \$151,202,274.94; in 1874 they were \$158,545,793.04; in 1875 they were \$154,324,787.08, and in 1876 they were \$147,370,687.81, or for the four years indicated the grand aggregate was reached of \$611,443,542.87. Now take the next four years, and we find appropriated for 1877, \$124,857,443.53; 1878, \$125,075,671.28; 1879, \$134,034,919.27, and for 1880, \$135,833,000, aggregating \$519,806,034.08, being \$91,637,507.79 less to run the Government for four years under the Democrats than for the four preceding years by the Republicans. In 1879, too, it will be remembered that Congress appropriated out of the Treasury \$5,500,000, under the treaty of Washington, to pay the fisheries award to Great Britain, which was peculiarly extraordinary. Subtracting that from the last aggregate of \$519,806,034.08 leaves the sum of \$514,306,034, or \$97,137,507.79 less appropriated during the Forty-fourth and Forty-fifth Congresses by the Democracy than for the corresponding period of the Forty-second and Forty-third Congresses under the Republicans. In this calculation the deficiencies are carried back to the preceding year. In both periods pensions are excluded. In the table marked A the deficiencies are credited to the same years that the other appropriations are made for; in this calculation they are, as just stated, carried back to the preceding years, which will account for the difference in the two statements.

I exclude the fish award of \$5,500,000 on the same ground that I exclude from the appropriations made at this session of Congress the \$11,000,000 for the Geneva award. Counting in that sum, and the grand aggregate of appropriations at this session would amount to \$306,248,943.75. But I exclude both the fish award and the Geneva award as extraordinary and unusual appropriations.

The Secretary of the Treasury, in his annual report to Congress of December last, estimates the total ordinary receipts at \$400,000,000. The estimated ordinary expenditures, including interest on the public debt, sinking fund, collection of customs, and all other expenditures under permanent appropriations, he puts at \$340,462,507.65. In his estimates of total receipts the Secretary only allows \$20,077.95 as the actual appropriation from the Treasury for postal expenditures, and does not include \$41,000,000 of postal revenues. Add that sum to the estimated expenditures, and we have about \$380,000,000, the estimated expenditures for 1883. Add the postal revenues of \$41,000,000 to the \$400,000,000 of estimated receipts, and we have \$441,000,000 of total receipts for 1883.

The appropriations made at this session of Congress are \$295,248,943.75 exclusive of the \$11,000,000 for the Geneva award, which makes \$306,248,943.75. The total estimated expenditures under permanent appropriations amount to \$126,202,939.22, which added makes the grand aggregate of \$432,451,882.97 of appropriations for the fiscal year ending June 30, 1883. In that deficiencies appropriated at this session are included, for it is fair to presume that the deficiencies will be as great next year as they are this under the management of our Republican friends; besides each Congress must be held responsible for what it appropriates.

At this rate of public expenditure, there will soon be no great surplus in the Treasury to vex us.

If this rate of expenditure continues, as it now from present appearances bids fair to do, instead of reducing taxes I rather fear they will be more likely increased. It is true there is at this time a cash balance available in the Treasury of \$139,000,000, but it is rapidly melting under the calcium-light of Republican statesmanship and will soon be gone. Nevertheless I favor a reform in our tariff laws which will bear more equally upon the people; in fact, reduce their burdens and at the same time increase the revenue. By adopting the revenue basis of taxation that desirable result can be doubtless attained, as the history of taxation in every country has demonstrated, notably in England and in this country.

But assuming that the total receipts, including revenues, will be \$440,000,000, and that the total expenditure will be \$380,000,000, including postal expenditure, there will be only \$60,000,000 surplus, which with another amendment to the pension laws or the adoption of a grand isthmian scheme may be swept from the vaults of the Treasury. But the appropriations made by this Congress as the estimated expenditures under permanent appropriations amount to \$432,000,000, including Geneva award, thus equaling, or nearly so, the estimated receipts, and leaving no surplus, or practically none, for the fiscal year of 1883.

More recent calculations by statisticians in the Treasury Department put the annual interest at \$57,000,000, while the Secretary in his annual report of December last puts the annual interest at \$65,000,000. The following table, compiled in the Treasury Department, is a full exhibit of the expenditures under permanent appropriations. This was for the past fiscal year of 1882. In a note from the very able and efficient chief of the warrant division, Mr. McClellan, bearing date 31st of July past, I am informed that there will be a reduction below these figures both in the interest and sinking fund account of \$15,000,000 each, making \$30,000,000, which would reduce the expenditures under the permanent and indefinite appropriations to \$116,849,000.

Expenditures under permanent and indefinite appropriations during fiscal year ending June 30, 1882.

Interest on the public debt.....	\$71,077,206 79
Salaries and expenses steamboat inspection service.....	228,371 46
One month's pay to certain employes of the House.....	19,960 03
International bimetallic commission.....	19,664 40
Contingent expenses national currency, reimbursable.....	38,329 64
Coinage of standard silver dollar.....	136,058 67

	60,079,150 00
Total.....	146,849,307 09

THE TREASURY DEPARTMENT,
Warrant Division, July 31, 1882.

I could pursue these analyses and comparisons further, exhibiting like results favorable to the Democrats, but it only adds demonstration to facts too well attested and universally admitted by all fair men. I have spoken from the record. These tables are compiled in every instance from the official records of the Government. I have endeavored to be fair, and I think I have been accurate.

The steady increase of expenditures, the creation of new bureaus, the extension of the paternal care of the Federal Government over almost every conceivable interest of the people, interests which used to be considered as purely domestic, and therefore under the charge of the State Governments exclusively, are rapidly familiarizing the public mind with the enlarged powers of the national Government, whether constitutional or assumed, so that we may expect and prepare ourselves in the future for larger appropriations and expenditures than were borne in the past. But with all that, there is still the greater need for watchfulness and a jealous guarding of the public interests by the Representatives of the people who supply the revenues against the cunning devices of what is now a well-known organization designed to exploit the Treasury.

The countless millions which have been thus exploited through unjust and discriminating laws, in almost every way, would be a frightful picture for the American people to gaze upon. But for their indomitable energy and for the amazing wealth of their unbounded natural resources the people would read in this picture of maladministration of their public affairs the bankruptcy of their nation and of themselves. But so young, vigorous, recuperative, and giant-like is the Republic, we may confidently hope with a frugal husbanding of our resources to find ourselves at the close of this century practically clear of debt and possessed of a wealth and comfort that far exceeds that of any other nation that has ever existed. But to attain that desirable end the laws of taxation should be equal and just, the protection to monopolies, whether in their individual or corporate capacity, should cease, and the public moneys should be judiciously appropriated according to law, and faithfully expended under the strict limitations of the same. Guided by any other rule there is no safety for the Government.

One other thought occurs to me. No party in power should be allowed to collect assessments for election purposes from officials and employes, as the larger the salaries are the larger are the assessments. The motive for the increase of salaries becomes one of the preservation of political power, which may become so great and powerful as to control elections and perpetuate the party in power indefinitely. This no political party or administration should be allowed to do. The Democrats in the Forty-fourth Congress thought they had effectually prevented this evil when they passed the following as a

part of the legislative, executive, and judicial appropriation bill for the year ending June 30, 1877. Section 6 reads thus:

That all executive officers or employes of the United States not appointed by the President, with the advice and consent of the Senate, are prohibited from requesting, giving to, or receiving from any other officer or employe of the Government any money or property or other thing of value for political purposes; and any such officer or employe who shall offend against the provision of this section shall be at once discharged from the service of the United States; and he shall also be deemed guilty of a misdemeanor, and on conviction thereof shall be fined in a sum not exceeding \$500.

This came from the Committee on Appropriations at the first session of the Forty-fourth Congress, at that time so ably presided over by the distinguished gentleman from Pennsylvania, [Mr. RANDALL.] We scarcely thought that it would be evaded by our Republican friends by a technicality. We did not believe that any one would seek to place disabilities in the suppression of an admitted evil upon officers and employes of the Government, and yet allow Senators and Representatives in Congress to perpetrate deeds made unlawful for others to commit.

And yet it is true. To-day a member of Congress is allowed to assess a Government clerk or employe or laborer for political purposes, when such assessment and payment would send other persons to prison unless they paid a fine of \$500. This unlawful practice a Democratic House attempted to abate, but the spirit and intention of the law is violated by a technical dodge, by handing over to a Congressional committee the entire body of Government officials and employes, to be exploited out of 2 per cent. to help continue and perpetuate that party in power; whereas plain, common people would be punished for doing the same thing.

But outside of the wrong and general indefensibility of those assessments it is a blow at the independence of the citizen who happens at the time to be a Government employe; but it also tends to induce the party in power to create new and unnecessary offices, to provide larger salaries, and to indulge extravagance in public expenditures. In that a wrong is done to the whole people. The good of the public ceases to be the rule and guide in the civil service, and only what is best calculated to perpetuate indefinitely the ruling party in power becomes the rule of action. The statement of this proposition carries to every patriot's mind and heart its own condemnation. The people will see to it that the law of 1877 is not evaded, but enforced, and if need be, enlarged, so as to let members of Congress understand that they possess no exclusive privileges, and are as amenable to the laws as are the private citizens of our common country.

Support of Common Schools.

SPEECH

OF

HON. CLEMENT DOWD,

OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 27, 1882,

On the bill (H. R. No. 6158) to aid in the support of common schools.

Mr. DOWD said:

Mr. SPEAKER: This bill in many respects the most important one which has engaged the attention of the present Congress; not on account of any grave constitutional or political question that is involved, nor because of the magnitude of the appropriation, but it affects the vital principles upon which our free institutions and the peace and order of society must forever rest.

We have appropriated more than twenty millions to support our Navy and improve our commerce upon the seas. We have appropriated about twenty millions for our inland navigation and to improve our rivers and harbors, while this bill proposes to apply only ten millions per annum for five years to improve the facilities of educating the illiterate and helpless masses of white and colored children in all parts of the country. The bill, as reported unanimously from the committee of which I have the honor to be a member, is as follows:

A bill to aid in the support of common schools.

Whereas it appears from the tenth census that one-eighth of the people of the United States are totally illiterate, and it seems that those States in which illiteracy exists to the greatest extent are not at present able to provide by local and State taxation for the adequate support of common schools to meet the emergency; and

Whereas the general welfare and perpetuity of our whole country depend upon the intelligence of all its citizens, and it is deemed to be the duty of the General Government to aid temporarily in the support of common schools: Therefore,

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That for five years next after the passage of this act there shall be annually appropriated, out of any money in the Treasury not otherwise appropriated, the sum of \$10,000,000 to aid in the support of free common schools, which amount shall be known as the common-school fund.

SEC. 2. That the Secretary of the Treasury shall annually apportion to the several States and Territories the said sum of \$10,000,000, according to the number of their respective populations of ten years and upward who cannot read and write, as shown by the Tenth Census of the United States, which report shall be submitted to the Commissioner of Education.

SEC. 3. That before any State or Territory shall be entitled to receive its share of said fund it shall have provided by law for the free common-school education of

all its children of school age, without distinction of color, for at least three months in each year, from the funds provided for schools under the laws of said State or Territory; and in no case shall any State or Territory be allowed out of said fund a greater sum than such State or Territory shall have expended during the previous year for the common-school education of the children of such State or Territory, exclusive of the amount received from the United States and exclusive of the sums paid for grounds, school buildings, or repairs on the same: *Provided*, That separate schools for white and colored children shall not be considered a distinction of color.

SEC. 4. That an amount not exceeding 5 per cent. of the sum apportioned to each State and Territory may be used by them for the education of teachers in normal schools, teachers' institutes, or otherwise.

SEC. 5. That it is hereby further provided that before any State or Territory shall be entitled to receive its share of said fund it shall have complied with the following conditions:

First. That it shall have applied all moneys by it previously received under the provisions of this act in accordance therewith.

Second. That it shall have caused to be made such reports to the Commissioner of Education concerning the condition of the schools in the same, on or before the 1st day of August in each year, as said Commissioner of Education, under the direction of the Secretary of the Interior, shall deem desirable; and shall especially report for each county as follows: The number of public schools of every grade; the whole number of days actually taught in each during the year preceding; the total amount received from State taxes and from local taxes and the total amount expended for educational purposes in the preceding year; the total amount expended for white and colored schools separately; the number of public-school buildings owned and hired, and the character, condition, and value of the same; the number of children, white and colored, male and female, in attendance on the public schools, and the length of attendance; the number of male and female teachers, white and colored, employed at the same time and at different times in the same year, with particulars as to qualifications of same; the number of school libraries, and the number of volumes therein; the branches taught and the textbooks used; the total amount of wages paid to teachers, male and female, white and colored.

SEC. 6. That the Commissioner of Education shall prepare forms of such blanks as shall facilitate the making of the reports herein provided for and transmit the same to the State and Territorial authorities.

SEC. 7. That in such States or Territories as shall maintain separate schools for white and colored children the money so apportioned shall be divided according to the respective number of such white and colored children in such State or Territory.

SEC. 8. That no part of the money so received from the United States shall be expended in the purchase of real estate, the construction or repair of school buildings, or in paying the salary of any public officer not engaged in teaching.

SEC. 9. That in case any State or Territory shall misapply or misappropriate the money, or any part thereof, received under this act, or shall fail to comply with the conditions thereof, or to report as herein prescribed, such State or Territory shall forfeit its right to any subsequent apportionment by virtue hereof until the amount so misapplied or misappropriated shall have been replaced by such State or Territory and applied as herein required; and until such report shall have been made all money so retained and not paid to such State or Territory shall be kept separate in the Treasury of the United States.

SEC. 10. That on or before the 1st day of September of each year the Commissioner of Education, under the direction of the Secretary of the Interior, shall certify to the governor of each State and Territory whether it is entitled to receive its apportionment under this act, and, if so entitled, the amount of such apportionment, and it thereupon shall be entitled to receive the same; but such certificate shall not be issued until all the requirements of this act referring to the duties of the officers of such State or Territory shall have been complied with.

SEC. 11. That the amount apportioned to any State or Territory, and certified as herein provided, shall be paid on or before October 1 of each year, upon the warrant of the Commissioner of Education, countersigned by the Secretary of the Interior, out of the Treasury of the United States, to such officer as shall be by the laws of such State or Territory entitled to receive the same.

SEC. 12. That the Commissioner of Education shall annually report to Congress the information received by him from the reports of the school officers of the several States and Territories provided for herein, together with such recommendations as will in the judgment of the Commissioner subserve the purposes of this act.

SEC. 13. That there is hereby appropriated the sum of \$10,000,000 for the year commencing September 1, 1882, which shall be apportioned as directed herein; and those States and Territories which have provided by law for the free common-school education of their children of school age, without distinction of color, shall be entitled to their apportionment of said sum, all other requirements precedent to the right to receive such apportionment being hereby waived for the year 1882.

SEC. 14. That any State signifying its desire that the amount allotted to it under the provisions of this act shall be appropriated in any other way for the promotion of common-school education in its own borders or elsewhere, its allotment shall be paid to such State to be thus appropriated: *Provided*, That its Legislature shall have first considered the question of its appropriation to the general fund for use under the provisions of this act in States and Territories where the proportion of illiterate persons is more than 5 per cent. of the whole population.

It will be seen that the proportion of the fund due each State, the basis being illiteracy, is to be turned over to and distributed by the State authorities exclusively, so that there can be no sort of friction between the State and Federal governments as to the conduct and management of the schools or of the fund. It cannot be alleged therefore that there is any politics in the bill. It recognizes no distinction of race, caste, section, or color. It provides for all sections, all classes, all races, colors, and nationalities, strictly and solely upon the basis of illiteracy. In other words it is a national charity, bestowed equally and impartially according to the wants and necessities of its recipients and beneficiaries.

While no one doubts the necessity for some such endowment from some source there are those, even upon this floor, who do call in question the power and perhaps the expediency of such a measure on the part of the General Government. I shall not discuss the question of power. It is too late now to deny the constitutional power of the General Government to make donations or appropriations in some form for educational purposes. The question has long ago been practically settled by precedent at least.

I care not whether you say the power is derived from that clause in our Constitution which says Congress shall provide for the general welfare, or whether you take the higher ground that Macaulay assumed before the British Parliament in 1847, that the doctrine of self-preservation applies to nations as well as individuals; that "it is the sacred duty of every government to take effectual measures for securing the persons and property of the community;" that the education of the common people is the most effectual means

of protecting persons and property, and that as the gross ignorance of the multitude produces danger to life and property, it is inconceivable how, even on the very lowest view of the duties of Government, it can be contended that education is not the province of government."

And even if we go back to Adam Smith, we find that while he was unfriendly to State interference, especially for educating the higher classes, and was in favor always of restricting the functions of government, he distinctly admits there is a difference as respects the poorer people, and that the State is deeply concerned in the education of the masses. "For that ignorance," says he, "spread through the lower classes, neglected by the State, is like unto a leprosy or some other fearful disease, and where this duty is neglected there is danger of riot, disorder, and dissolution."

But I have said there are too many precedents already established to leave room for debate as to the question of power in this country and under our Constitution. As early as 1642 the Protestant Non-conformists, the founders of the Commonwealth of Massachusetts, men of such high spirit and firm convictions that they preferred life in a wilderness with the privilege of worshiping according to the dictates of their own consciences rather than in a land of prosperity where they could not enjoy these blessings, "though their love of freedom was unbounded and indestructible, they could see nothing servile or degrading in the principle that the State should take upon itself the charge of educating the people." In their first legislative enactment on this subject they distinctly affirm the principle that "education is a matter of the deepest possible importance and the greatest possible interest to all nations and all communities, and that as such it was in an eminent degree deserving of the peculiar attention of the State."

"Educate the people" was the first admonition addressed by Penn to the Commonwealth he founded. "Educate the people" was the last legacy of Washington to the Republic of the United States. "Educate the people" was the unceasing exhortation of Jefferson. Washington in his Farewell Address said:

Promote, then, as an object of primary importance, institutions for the general diffusion of knowledge. In proportion as the structure of a government gives force to public opinion, it is essential that public opinion should be enlightened.

The writings of John Adams show that he placed the highest estimate upon popular education as a necessary safeguard of free institutions. Thomas Jefferson, after retiring from the Presidential office, devoted the remainder of his life to the cause of education in his native State. His system embraced elementary schools, colleges, and a university. In a letter to a friend dated January 6, 1816, he says:

If a nation expects to be ignorant and free in a state of civilization, it expects what never will be. The functionaries of every government have propensities to command at will the liberty and property of their constituents. There is no safe deposit for them but with the people themselves; nor can they be safe with them without information. Where the press is free and every man able to read all is safe.

And as a testimony to all men of the estimate he placed upon education, he wrote this epitaph to be inscribed upon his tomb: "Author of the Declaration of Independence, of the Virginia bill for religious freedom, and father of the University of Virginia."

Mr. Madison said:

A popular government without popular information, or the means of acquiring

it, is but a prologue to a farce or tragedy, or perhaps both. Knowledge will forever govern ignorance, and a people who mean to be their own governors must arm themselves with the power which knowledge gives. * * * The best service that can be rendered to a country next to that of giving it liberty is in diffusing the mental improvement essential to the preservation and enjoyment of that blessing. * * * It is only when the people become ignorant and corrupt that they become incapable of exercising sovereignty. Then usurpation is of easy attainment and an usurper will soon be found.

But I need not multiply extracts from the speeches and writings of the eminent men of this country from the foundation of the Government in support of the proposition that our free institutions rest upon the intelligence of the people, and cannot be expected to withstand the corruption, insubordination, and violence which are so generally the offspring of ignorance. The Government of the United States, Congress itself, is committed not only to the expediency and necessity for governmental aid for educational purposes but also to the constitutional power of Congress to grant such aid.

The following table will show the number of acres of public lands that have been granted from time to time by Congress for the benefit of common schools in certain States and Territories. It will be seen that some of the States, to wit, the original thirteen, and Maine, Vermont, and Kentucky, have received no part of these large donations. But this is of course due to fortuitous circumstances, and does not weaken the force of the self-evident proposition that the General Government has the same power to make a donation to one State as to another, and the same power to donate money that it has to donate land or anything else of value. Even as late as July, 1862, Congress granted to each State, old and new, 30,000 acres of the public domain for each Senator and Representative in Congress, to endow a college of agriculture and the mechanic arts in each State, and nobody has been heard to raise the cry that that act was unconstitutional or an unwarranted interference with the local affairs of the States.

The table of land grants by the General Government for educational purposes is as follows:

	Acres.		Acres.
Alabama	902,774	Michigan	1,067,397
Arizona	4,050,350	Minnesota	2,989,996
Arkansas	880,460	Mississippi	637,584
California	6,719,324	Missouri	1,199,139
Colorado	3,715,555	Nebraska	2,702,044
Dakota	8,554,560	Nevada	3,985,430
Florida	908,503	New Mexico	4,309,368
Idaho	3,233,137	Ohio	704,488
Illinois	985,066	Oregon	3,329,706
Indiana	650,317	Tennessee	100,000
Iowa	905,144	Utah	3,130,869
Kansas	2,891,306	Washington	2,488,675
Louisiana	786,044	Wisconsin	958,649

I beg leave also to present in this connection the memorial of the National Educational Association to the joint committee of the two Houses, which contains a table of valuable statistical information, to wit:

A MEMORIAL TO CONGRESS.

The undersigned earnestly call the attention of Senators and Representatives to the following facts and suggestions with reference to governmental aid to common schools, on the basis of illiteracy.

The following table is based upon the estimates of the Bureau of Education. In the sums raised by the States interest on the invested funds is not included, except in a few States. The table is not exhaustive, but only illustrative:

State.	Total population, 1880.	Total illiterates, ten years and over, who cannot write, 1879.	Colored illiterates, ten years and over, who cannot write, 1879.	Total of State and local taxes for common schools, 1879.	What this gives for an average school of 50 pupils per annum.	Total sum that a fund of \$3 per capita for illiterates would give the State.	How much this because of colored illiteracy.	How much of it to white illiteracy.
Alabama	1,262,505	433,447	321,680	\$250,000	\$17	\$1,300,341	\$965,040	\$335,301
Iowa	1,621,615	46,609		4,227,300		139,827		139,827
North Carolina	1,399,750	463,975	271,943	314,719	20	1,391,925	815,829	576,096
Wisconsin	1,315,097	55,558		2,223,581		166,674		166,674
Kentucky	1,648,090	348,392	133,895	947,392	76	1,045,176	401,685	643,491
Michigan	1,636,937	63,723		2,453,831		191,169		191,169
Arkansas	802,525	202,015	103,473	189,080	28	606,045	310,419	295,626
Connecticut	622,700	28,424		1,276,667		85,272		85,272
Louisiana	919,946	318,380	259,429	450,000	42	955,140	778,287	176,853
Kansas	966,096	39,476		1,276,786		118,428		118,428
Georgia	1,542,180	520,416	391,482	471,089	27	1,561,248	1,174,446	381,862
Massachusetts	1,788,085	92,980		4,372,286		278,940		278,940
South Carolina	995,577	369,848	300,071	440,110	16	1,109,544	930,213	179,331

We respectfully suggest:

1. The help should be so given that it will stimulate rather than supersede the necessity of State effort.

2. It should be help for the common schools; temporary aid in the training of teachers perhaps, but chiefly in giving them opportunity to teach.

"The safety of the Republic is the supreme law of the land." This is the maxim which not only justifies but demands action on the part of the General Government; and it should also suggest the limitations under which the action should be taken.

3. The help should be immediate and not remote. The fortunes of war and the necessities of legislative action have made citizens of a large mass of ignorant men, whose votes are to shape, for weal or woe, the character of our laws. Education alone can convert this mass of ignorance and element of danger into one of enlightened strength and safety.

Largely more than one-half of a fund for the education of the illiterate would go to the South for negro illiteracy; less than one-fourth because of white illiteracy. If Congress should create a fund which would give \$3 per annum per capita for the education of this class alone it will require an aggregate annual sum of \$18,719,958. Of this Mississippi, *e. g.*, would receive \$1,119,603, but of this \$959,529 would be for colored illiterates and \$160,344 for white illiterates.

Representing an educational work in the South chiefly for the negro race, in which have been expended about \$10,000,000, and speaking with a wide knowledge of facts, we emphatically assert the impossibility of accomplishing this great work unless the General Government shall come to the assistance of those States in which this illiteracy is chiefly found.

Every dollar we have expended expresses the conscientious and earnest desire of the donor that this work shall be done, and is an emphatic vote for the action for which we ask.

In the name of the millions of Christian citizens whom we represent, we earnestly urge Congress to help qualify the ignorant voters, who are intrusted largely by Congressional action with the ballot, for the duties with which they are charged, believing the power to do this is co-ordinate with the power that enfranchised them.

S. C. ARMSTRONG,

Hampton Institute, Virginia.

WASHINGTON, D. C., March, 1882.

A number of bills were introduced and referred to our committee, differing in many respects but all agreeing in one essential particular, and that is that the fund should be distributed upon the basis of illiteracy. This will of course give the greater portion to the South. Not that the South was deficient in educational facilities before the war, for by the census of 1860 it appears that the white population of the North was about 19,000,000 and of the South about 8,000,000. The North at that time had 205 colleges, 1,407 professors, and 29,044 students, while the South had 262 colleges, 1,488 professors, and 27,055 students. For these institutions the North expended \$1,514,688 and on academic institutions \$4,663,749. For similar institutions the South expended respectively \$1,662,419 and \$4,328,127.

While the slaves were freed by the results of the war and the right of suffrage conferred upon 800,000 or more of voters who could not read the ballots they cast, the people of the States in which these new rights were conferred were stripped of their property and rendered bankrupt by the results of the same conflict. "The assessed valuation for taxation of property, real and personal, in North Carolina, South Carolina, Florida, Georgia, Alabama, Mississippi, Louisiana, and Texas, in 1860, was \$3,244,239,406; in 1870, \$1,830,863,180—a shrinkage in ten years of 43½ per cent." In North Carolina the assessed valuation of real and personal property in 1860 was \$292,297,602, while in 1870 it was only \$130,378,622, and in 1880, \$156,100,202. It is absolutely impossible, therefore, to say nothing of the equity and justice of the case, for the South to educate the 4,000,000 of liberated people within her borders; and yet they must be educated, for we have the testimony of the fathers and the history and experience of the world that free institutions cannot stand nor the peace and order of society be preserved where there is such a large percentage of ignorance among the masses and at the polls. Hopeless as the task would seem to be, the Southern people have set themselves courageously and energetically to work. Dr. Currie, agent for the Peabody fund, who has traveled all over the South and knows whereof he speaks, says:

Notwithstanding the drawbacks and obstacles, the South has made cheering progress in the work of universal education. In the lapse of a few years every Southern State has incorporated into organic law and put upon the statute book a system of free public instruction. Every State has a superintendent of schools. Communities are supplementing by local taxation the State revenues. Educational journals are published in seven States and normal schools are rapidly growing into favor.

From the address before our committee of Hon. J. H. Smart, of Indiana, who presided at the National Teachers' Association which met in Atlanta some two years ago, and who understands well what the people of the South have done and are willing to do, I quote, as follows:

Now, I want to express the opinion that the Southern people are willing to do all they can to cure this great evil and remove this great wrong, and, so far as I have observed, the work that has been done, under existing circumstances, has been a marvelous work. The Southern people have made a heroic effort, certainly in three or four States that I have visited, to do the best that could be done for these colored people. I want to say that throughout the length and breadth of the Southern States, without one exception, the colored people are given the same advantages that the white people are given. No distinction whatever is made; and, so far as I was able to find out, there is an almost unanimous, certainly an

overwhelming sentiment in favor of educating the colored children equally with the white children. And I believe, from what I saw, that we are able to trust the existing State organizations, represented by these gentlemen; we are able to trust them with whatever means we can appropriate, and I speak after some investigation and after deliberation.

There is a pressing need, and these gentlemen have told you about it; there is no necessity for me to talk about it, but I want to express the feeling that I think exists in my own section of the country; that this appropriation ought to be made—not only for the protection of the people of the South but for the protection of the people of the North; that while we do not need it for our own illiterates, for we ought to be able to take care of them ourselves, we need it because we suffer from an ignorant ballot, and we see danger in it, so that we join our brethren from the South in asking Congress to make an adequate and a speedy appropriation in order that this great evil may be rooted out.

From the speech of Hon. M. A. Newell, State superintendent of schools, Maryland, delivered before the joint committee of the two Houses, I quote as follows:

We look upon ignorance not as a local but as a national question, and we consider it as much, or nearly as much, of an evil to have ignorance in Florida or Georgia as it would be to have it in Maryland or Pennsylvania. Yet I think, though you and the gentlemen of this committee have studied this question long and deeply, you are hardly aware, even now, of the immense mass of ignorance that is pressing upon us not only in the South but in the Middle States and in the North.

I am old-fashioned enough to think still that the State ought to do nothing that the private individual can do as well; and I am willing to carry it further, and to say that the National Government should do nothing that the State government can do as well; but all history and all experience prove to us that the individual is not able to educate his children. He has never done it in the history of the world; the State must come in and aid him in the work; and I think we have proved abundantly that in our Southern States at all events the State is not able to do the work of education. Therefore I say it is the duty and the privilege of the National Government to come in and help the States to do that which they are willing but are not able to do.

Also, the following from the speech of Hon. D. F. De Wolfe, State superintendent of schools, Ohio, delivered on the same occasion:

There is one point that I should like to speak of for the State of Ohio, and I think for the Central and Western States. I have mingled with these people for forty years; was with them during the great struggle that resulted in the reconstruction, so called, of the Southern States. Those States were a party to the doctrines that were embodied in that reconstruction when they united in imposing on the Southern States a large body of voters. They took the responsibility of imposing upon that section of the country and upon the United States a large body of voters. I do not know but that they did wisely, and I do not know but that they think they did wisely, but they think they assumed very great responsibilities, and I think they are ready now to consider those responsibilities, and to take what action may be necessary to meet those responsibilities.

The State of Ohio is a wealthy State, but she feels that she has about all that she can do to support her own system of schools, of which she feels proud. She sympathizes with Georgia and South Carolina and the other States of the South in the great labor that has been imposed upon them in this imposition of so many millions of people as citizens who are not educated. I think that whole section will be hearty in its accord with the notion of doing at once all that the United States Government feels that it can do at once for the assistance of those States in this matter.

I beg indulgence for one other quotation at this point. It is from the excellent address of Rev. Dr. Mayo, a Northern gentleman who has spent the last two years in visiting and addressing the teachers and pupils of the Southern schools, and who seems to be not only well acquainted with the educational condition of our people but in earnest sympathy with them as well as deeply interested in his work:

Rev. Dr. Mayo. Gentlemen of the committee, I suppose my brethren have asked me to say a word to you because for the last two years I have spent my whole time during the school year in visiting the schools of twelve of the Southern States, from Virginia to Texas inclusive. During this time I have had the most ample opportunities afforded me by the State authorities, by teachers, by citizens, by pupils, by people of every class, to ascertain the condition of educational affairs in that portion of the country, and I feel that I am in a condition to form intelligent opinions in regard to the several matters that will come before you in this consultation. Of course time will not permit me to give the data or the reasons for conclusions which I may express to you, but ever since I began this work—and I would say that previous to that I had no personal knowledge of affairs in the South, and never went through the South until two years ago—several conclusions have forced themselves constantly upon my attention.

In the first place, I am fully prepared to indorse that emphatic declaration of Dr. Curry, who perhaps better than any Southern man understands the educational condition of the South, when he says that the illiteracy of the Southern States is absolutely appalling. By this I do not wish to say that the leading classes of the Southern States are an ignorant people. I find them there a very cultivated people; I find a people equal to any people in the world; I find as a class the white people of the South are fully up to the people of any State in the Union in natural capacity and force; but the condition of illiteracy which exists seems to me absolutely appalling. And one little point I wish to call your attention to here: not only is this illiteracy confined to the colored people and to the poor white people but there is great danger, unless something can be done soon, that great numbers of the children of the better classes of white people in the South will be plunged into illiteracy.

No class in the South suffered so much from the effects of the war as the respectable leading class of white people in the South, and to-day there are hundreds of thousands of boys and girls growing up through all the Southern States, the sons and daughters of the leading people of those States, who, unless something can be done very soon, will be doomed to grow up in ignorance. Perhaps the most pitiful thing that can happen to any State is that it should lose what it has gained. While the blacks and the poorer whites are really better off in educational affairs than ever before, the children of the better classes of people are absolutely worse off than they ever were before.

Now, to meet this condition of illiteracy, it seems to me utterly idle to speak of anything but a system of thorough elementary education afforded by the State. No church system of schools, no private system of schools can meet the exigency. There must be a system of elementary education, which includes the training of teachers, proper school-houses, and everything of this kind, in order to meet this great want.

Another matter has forced itself very constantly on my attention which has been alluded to before, which is this: I am pretty well acquainted with the condition of education in our country and in other countries, and I have no hesitation in announcing to you, gentlemen, my conviction that never within ten years in the history of the world has an effort so great, so persistent, and so absolutely heroic

been made by any people for the education of the children as by the leading class of the people in our Southern States.

Practically, within ten years every one of these Southern States has put on its statute-book a system of public schools; practically, within this time every district of country in the South has received something that can be called a school. This school public, as we may call it, consisting of State officials, of school officers, of superior teachers, of thoughtful people all over the South, is to my mind the most forcible, the most persistent, the most devoted school public now in any part of the world. There is no body of superior teachers doing so much work for so little pay and under such great disadvantages as in the South to-day. There is no minority of people working so hard to overcome this terrible calamity of illiteracy anywhere in the world to-day as in the South. I give this as the deliberate result of two years of observation in twelve States.

Once more, gentlemen, it seems to me that in building up this system of elementary education our Southern people have come almost to a halt. For the last ten years the school public has been working in every conceivable way to bring the attention of the people to this matter, and I believe to-day that the practicable limit of taxation is about reached. We may say ideally and abstractly that the Southern people can give more than they do for education; but practically, looking at them as we look at every other people in the world, I believe the limit is reached.

We must remember, gentlemen, that nine men out of ten in the South never saw what we call a good public elementary school. The thing that is necessary is to put for one year, for two years, for three years in every district through that country a school that will be a fair representative of a public school, that the people can see it; and once having seen it and enjoyed its benefits, they never will give it up again. Now, it is utterly impossible for the average school authority to get the money to put such a school on the ground.

Give to that man another \$500, another \$1,000, and at once, without wearing himself out with importunity, he can put on the ground the school that the people need; a school that, instead of being a school that satisfies nobody, is a school that satisfies everybody; and once having seen that school for one year, for two years, for five years, for ten years, that people will be stimulated to great exertions, and will never give it up. * * * What is to be done should be done at once to meet the great demand of the present. * * * I am acquainted with the State superintendent of instruction, I believe, in every Southern State. I am acquainted with the State school board, I think, of every Southern State but two or three. I have studied with great care in the records of all those offices their methods of distribution of money. I believe there is no set of men in this country who are handling a moderate amount of money with greater economy, with greater fidelity, than these gentlemen. I believe if there is any set of men in this country that can be trusted to administer a fund of \$10,000,000 or \$15,000,000 in thirteen or fourteen States with fidelity, it is the school authorities of those States, and therefore it seems to me that this money should go directly to the children through the accustomed channels, of course being guarded by all proper safeguards in the central power.

These extracts I have given from the speeches and writings of eminent philanthropists and educators from the North who have given the whole subject careful consideration, and who understand the sentiments and feelings of the people North and South upon this great question. They present a picture much stronger and more vivid than I could hope to do of the appalling mass of ignorance existing, especially in the late slave States, and of the heroic, gigantic, but almost desperate and hopeless efforts the people of those States are making to grapple with it and overcome it. The people of the South, philanthropists and good men all over the country, are deeply concerned in this matter. We appeal to our fellow-citizens in all the more favored sections of the country to aid us in this terrible conflict.

I appeal to the members of this House who represent wealthy and prosperous States and communities in the North, East, and West to aid us at least to the extent of voting for this bill. If your people do not need the little portion of the fund they would get they can so much the better afford to pay what will be so little to them and so much to us. You are interested as well as we, your people as well as ours. If free government proves a failure at the South because of ignorance and its attendant evils, no part of the country, however enlightened within itself, can escape the consequences. If disorder and violence and anarchy prevail at the South, prosperity at least will be retarded at the North.

I hope it will not be offensive to say that the people of the South were not alone responsible for the institution of slavery and the illiteracy that was inseparable from it. If we cherished that institution the people in all parts of the country sanctioned it and acquiesced in it, and the statesmen of all parts of the country are on record in favor not only of its legality and constitutionality but also of its protection. Let me say further, it was not abolished because it was illegal or immoral or unconstitutional, but only as a war measure. The proclamation of emancipation contained a provision that if the rebels would lay down their arms and return to their allegiance to the Union the slaves of the South might still continue in bondage.

But I would not revive sectionalism in any sense or any form. I abhor it as the evil genius of a once happy and united people, as a monster that has disturbed the peace, happiness, and prosperity of this country for more than half a century. Away with it forever. Let it be buried, embalmed, if you choose, in the ruins and sufferings of the past. Let us henceforth "know no North, no South, no East, no West, but one common country." If we cannot therefore appeal to your sense of justice to help us with this herculean task, we will not stand upon words; we appeal to your humanity, your self-interest, your love of country.

I have no toleration for that spirit which objects that this is a new departure, an unauthorized interference with the local affairs of the States. Such a sentiment is not only at war with the spirit of the American people, as I believe, but wholly unworthy of the momentous issues involved. Will any professing to be statesmen stand upon such flimsy and idealistic technicalities, and with folded arms suffer those to become cancers upon the body-politic who might have been its power and its strength? Does any one believe that the functions of government are only those of a great hangman; that it can do nothing for the repression of crime except to build prisons and gibbets and barracks, or parade bayonets and muskets?

Can it do nothing to improve the understanding, enlighten the minds, cultivate the morals, and discipline the passions of the people? Must it wait till the incendiary fires are blazing, till riots and murder take place, and then begin its work, which can only be to shoot, to imprison, and hang? I believe in no such doctrine as that. The like of it was never dreamed of, even in the old philosophy of the wildest and extremest of State-rights advocates. The objection to the bill does not rest, I am sure, upon any such grounds. It does not come from the people or the States that believed in these extreme doctrines. I was pained and alarmed to see a distinguished gentleman from the wealthy and enlightened State of New York the first to object, and then another from Pennsylvania, and another from Indiana, and another and another and another, all from the North, East, and West. No man from the South objected, or could object and then go back and hold up his head among his constituents.

Let me remind the distinguished gentlemen who interposed these objections and thus defeated the present consideration of this bill that they and the people they represent were chiefly instrumental in liberating and placing the ballot in the hands of the illiterate masses we are now trying to educate, and, in conclusion, quote for their benefit the almost prophetic words of one of England's greatest statesmen and authors:

He is a very short-sighted friend of the common people who is eager to bestow upon them vast franchises, and yet makes no effort to give them that education without which such franchises cannot be beneficial either to themselves or the State.

The following table shows the number of voters in the late slaveholding States that cannot read or write:

States.	Total males of 21 years of age and upward.	Number of males 21 years of age and upward who cannot write.		
		White.	Colored.	Total.
Alabama.....	259,884	24,450	96,408	120,858
Arkansas.....	182,977	21,349	24,390	55,649
Delaware.....	38,298	2,955	3,787	6,742
Florida.....	61,699	4,706	19,110	23,816
Georgia.....	321,438	28,571	116,516	145,087
Kentucky.....	376,221	54,956	43,177	98,133
Louisiana.....	216,787	16,377	86,555	102,932
Maryland.....	232,106	15,152	30,873	46,025
Mississippi.....	238,532	12,473	99,068	111,541
Missouri.....	541,207	40,655	19,028	59,683
North Carolina.....	294,740	44,420	80,282	124,702
South Carolina.....	205,789	13,924	93,010	106,934
Tennessee.....	330,305	46,948	58,601	105,549
Texas.....	380,476	32,085	59,669	91,754
Virginia.....	334,505	31,474	100,210	131,684
West Virginia.....	139,161	19,055	3,830	22,885
Total.....	4,154,125	410,550	944,424	1,354,974

The ability to write is considered by statisticians the true test of illiteracy, as many persons through shame will not admit they cannot read, but are not so likely to claim that they can write. Besides, a person who can read and not write is essentially an illiterate.

The following statement, showing the ratio of illiterate males of twenty-one years of age and upward to the whole number of males of the same ages in the States named, is derived by the committee from the preceding table. There being but few foreigners in those States, nearly all of those persons are citizens of the United States and voters:

Ratio of illiterate males twenty-one years of age and upward.	
Alabama.....	46.7
Arkansas.....	30.4
Delaware.....	17.6
Florida.....	38.6
Georgia.....	45.1
Kentucky.....	26.0
Louisiana.....	47.4
Maryland.....	19.4
Mississippi.....	46.7
North Carolina.....	42.3
South Carolina.....	51.9
Tennessee.....	31.9
Virginia.....	39.9
West Virginia.....	16.4
Missouri.....	11.0
Texas.....	24.3

The average ratio of illiterate males of the ages named in the above States is 32.3.

Of the above illiterates 69.7 per cent. are colored, and 30.3 per cent. are whites.

Total expenditure for public schools, as shown by last census, for the year 1880.

Alabama.....	\$465,724	Matana.....	\$70,374
Arizona.....	61,172	Nebraska.....	1,047,907
Arkansas.....	179,464	Nevada.....	144,244
California.....	2,912,579	New Hampshire.....	568,087
Colorado.....	423,527	New Jersey.....	1,798,547
Connecticut.....	1,381,052	New Mexico.....	18,891
Dakota.....	95,807	New York.....	9,952,653
Delaware.....	169,303	North Carolina.....	960,985
District of Columbia.....	438,567	Ohio.....	7,529,859
Florida.....	120,690	Oregon.....	311,752
Georgia.....	642,090	Pennsylvania.....	7,243,967
Idaho.....	38,348	Rhode Island.....	530,825
Illinois.....	7,467,660	South Carolina.....	353,442
Indiana.....	4,491,850	Tennessee.....	736,660
Iowa.....	4,914,689	Texas.....	726,496
Kansas.....	1,819,385	Utah.....	170,883
Kentucky.....	824,797	Vermont.....	446,216
Louisiana.....	529,065	Virginia.....	863,407
Maine.....	995,983	Washington.....	108,771
Maryland.....	1,291,741	West Virginia.....	656,024
Massachusetts.....	4,841,338	Wisconsin.....	2,228,660
Michigan.....	2,661,541	Wyoming.....	28,594
Minnesota.....	1,564,194		
Mississippi.....	691,080	United States.....	75,574,048
Missouri.....	655,158		

TABLE NO. 4.—*Illiteracy in the United States, (census of 1880.)*

States and Territories.	Total population.	Total population who cannot read, ten years of age and over.	Percentage of total population who cannot read.	Total population who cannot write, ten years of age and over.	Percentage of total population who cannot write.	Total white population.	Total white population who cannot write, ten years of age and over.	Percentage of total white population who cannot write.	Total colored population.	Total colored population who cannot write, ten years of age and over.	Percentage of total colored population who cannot write.

Support of Common Schools.

SPEECH

OF

HON. HORATIO BISBEE,

OF FLORIDA.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 27, 1882,

On the bill (H. R. No. 6158) to aid in the support of common schools.

Mr. BISBEE said:

Mr. SPEAKER: In determining the questions of national economy that serve to build up the power and strengthen the national security, it is firmly established that education and its results, a high order of intelligence of the people, are essential to the prosperity and greatness of a State.

The general education of the people is, indeed, a wise national economy, as the small expenditure of national resources necessary to educate the people in the higher scale of individual efficiency is slight indeed compared to the returns therefrom and the larger gains to all conditions of society. The education of a nation is the distinguishing mark between a stagnant and a progressive people. To determine the best system of national education, in fact to determine what is a national education, has long exercised the minds of philosophers and deep-thinking men. It can never be a mere industrial education, relating to the science of agriculture and the economy of labor in all other industrial pursuits. It presents a broader and deeper signification, and embraces a wider field of human exertion. The ancients sought a solution of this difficult problem and the student is instructed and entertained by a review of the systems of the ancient republics. Greece presented two methods of national education in strong contrast with each other. In one the martial spirit of the people was trained by a stern Spartan system of military discipline and restraint. It was an all-pervading submission to all-constraining law which demanded a surrender of individual ideas. The historian informs us that the fall of Leonidas with his three hundred braves at Thermopylae, in obedience to the laws, was the "crown and the flower of the life" of the city, which contained no men renowned for intellectual achievements. On the other hand, the Athenian method was the full and free development of the intellectual idea, and more than in any other land or period we behold the results of such intellectual culture operating upon the minds of the whole free population of a State.

These two systems, although directly opposite to each other, are capable of being united from the very nature of man, because of his higher intellectual nature, which education awakens into life and vigor, and of his lower impulses and desires, which must be governed and controlled and brought under subjection.

The Greeks transmitted to the Romans their system of education, yet the Romans never excelled as did the Greeks in the higher order of intellectual attainments as a class.

It is true the Roman education was made a branch of the civil service, and colleges and schools of learning were founded for the education of the higher classes of Roman society, but the learning thus obtained held no relation to the practical life of the nation. Rhetoric and oratory bloomed for awhile, but disappeared with the loss of free popular conventions, and nothing but the rude clangor of armed legions, born of Roman discipline and rule, is heard along the aisles of succeeding centuries, as military empire rose and fell upon the tide of time.

Through the dark ages succeeding the fall of the Roman Empire nearly all learning was confined to the monks, who treasured up within the cells of their monasteries the rich products of former ages of intellectual splendor and renown. The monastic schools at Fulda, Aachen, St. Gall, and other cities laid the foundation for the larger intellectual growth of succeeding ages. It is also true that from the court schools founded by Karl the Great at Paris, which became the nursery of the royal court of France, sprang the University of Paris, the progenitor of all other European universities except Bologna and Oxford. But these institutions did not reach the people in their beneficial results. They were class institutions, founded in the interest of the higher classes of society, and were not the means of popular education, and yet they were wonderfully patronized. The historian relates that at one time the University of Oxford was attended by forty thousand students. The history of education in England is full of interest to the student. During the middle ages the monastic schools were the only means of educating the children, the larger institutions being entirely devoted to the education of men who had obtained their majority.

Those schools were, however, limited in their number and branches of learning. The art of grammar, music, and arithmetic, and a slight sprinkling of Latin literature comprised them, and this status was maintained without change or improvement long after the revival of learning and the comprehensive study of the classics began. The Reformation marks an important era in popular education. This greatest of religious upheavals gave a mighty impetus toward the education of the people. Martin Luther demanded that the Bible should become the people's book, and that the new literature

embraced in its new translation should be spread among the people. He also strongly advocated a general diffusion of knowledge among all classes of society. His appeals to the German cities for the establishment of schools for the general study of letters, and for the formation of libraries in the cities of all kinds of works as an adjunct to the school system, were among the most powerful of that great reformer. He held that the brightest gems and costliest jewels that a city could possess were its refined and cultured citizens.

The Reformation thus begun under John Calvin, in England, pushed its way through Switzerland, Germany, Holland, and France, and completely dominated Scotland to its ideas. It held that every community should be able to read and understand the Bible when placed within its hands. The natural results that flowed from this agitation were largely in the interest of popular education. Knox followed with his persistent advocacy for the establishment of English and Latin schools, and the advancement of the universities. Yet it was not until the present century that the question was seriously entertained in England of founding a permanent system of popular education, whereby the masses of the people might be reached and provided with the means of education, as well as the higher and middle classes.

In the year 1847 the British Parliament appropriated \$500,000 for the foundation of a public-school system. This was the first money appropriation ever made in that interest, and it was the initiation of the present public-school system of Great Britain, which of late years only has been so established as to meet the wants of the whole people.

The system of American education, which of late years has attained such marvelous growth and power, was begun by the churches, and to the ecclesiastical element of American society belongs the honor of founding the highest order of its educational institutions. There are of course exceptions to this rule, and the University of Pennsylvania, founded through the influence of Benjamin Franklin, and the colleges and academies of the New England States fashioned after Harvard and Yale, are almost entirely independent of ecclesiastical control. Those, however, of the Western and Middle States are fostered and in a great measure supported by the church. The same may be said of the institutions of learning in the South, with a few notable exceptions, where the State has provided the charters and assumed control by legislative enactment. Generally speaking, however, it is an undisputed fact, that until a recent period of our history institutions of learning have been founded and controlled by ecclesiastical bodies, and not endowed by the State government.

With regard to popular education in the United States it may be said that the system dates far back in the beginning of our history. Among the colonies elementary schools were numerous established, imparting to all within their reach an elementary English education.

State education originated in New England, and gradually extended to other parts of the Union. Recently its progress has been swift, especially in the Southern States since the close of the late civil war. Nevertheless the system of national education in America is in its infancy, and may be said to be thus far but experimental. While the experiment has demonstrated the supreme importance of education to the happiness and prosperity of a free people, the nation itself has not accorded to the system that support which its importance demands. The first duty of a government toward its people is to secure their happiness, and when it fails to thus promote this primal good it departs from the object of its creation. As intelligence is the basis of true happiness for both the individual in his personal relations and the citizen in his political relations, it behooves the Government to exercise its fostering care in promoting the means of universal intelligence by a diffusion of knowledge among its people. This can only be attained by the establishment of schools for the nation's education. The question may be asked, What is a nation's education? It is not merely an acquaintance with books and forms; it is a system of education that develops the intellectual power of a man, that he may know and understand the ideas and relations that exist among men, and that prepares his mind to act with the mental freedom his own race has attained; that creates within him that spirit which is primarily essential in the proper exercise of whatever political power the Constitution of his country intrusts to his care and maintenance as a patriot and a friend of liberty; that confers upon him such instructions and special preparations for the vigorous and successful pursuit of any profession, calling, trade, or industry that falls to his lot in life. And where can the offspring of the poorer classes derive this knowledge save in the public schools established either by the State or National Government?

Mr. Speaker, I declare myself to be in favor of a broad and liberal system of education by the National Government where the States have failed to provide the means for this all-important condition of society. I believe that the Government of the United States possesses the power under the Constitution to appropriate and expend liberal sums of money in aid of this great system of national prosperity and security, for I believe that the preservation of this Government depends in a great measure upon the intelligence and enlightenment of its people.

When we consider the large immigration that is yearly pouring into our country and spreading over our vast domain from all parts of the Old World, and reflect that their offspring must be made acquainted with our institutions to fit them for the duties of American citizenship, how forcibly indeed does the necessity appear for the establishment of schools for national education.

I do not hold that the States should be released from any obligations that rest upon them to aid in the education of the people. Rather do I look upon it as one of the most sacred obligations ever imposed upon the sovereignty of a State to establish the means whereby the intelligence and culture of its people may be promoted. And I look with pride and admiration upon those great States of our Union which have provided the means for the liberal education of their citizens, made compulsory education a part of their institutions, and declared a certain amount of education to be essential to full citizenship. But no State should make educational qualifications for the exercise of the elective franchise until it has for some years furnished to its citizens the means for acquiring the requisite education.

I consider this question of education of the people to be of such overwhelming importance to both the citizen and the nation that I am prepared to advocate the doctrine that the General Government should educate the people wherever from ulterior causes they have been deprived of this inestimable privilege.

And when we come to consider the form of our Government, the character of its institutions, the enlarged liberty to the individual citizen, the absence of a great standing army to preserve the peace and aid in the execution of the laws; when we consider the fact that the laws themselves are made by the people and not by a monarch, and that to the intelligence, integrity, and love of country of the individual citizen is submitted, under our republican form of government, the maintenance of the laws of a State or community, how essential is it that the people should fully understand and appreciate the blessings of a free government which it is their highest duty to preserve and perpetuate. The execution by the citizen of a sovereign's will, expressed by his law or proclamation, requires but a low order of intelligence, but under our republican form of government a higher order of intelligence is required, as the law itself emanates from the people primarily.

This point has been well stated and elaborated in a speech delivered in the United States Senate by Senator BLAIR, of New Hampshire, upon the bill to aid in the establishment and temporary support of public schools:

There is no truth better established or more generally admitted than that the republican form of government cannot exist unless the people are competent to govern themselves. The contrary doctrine would be an absurdity, a contradiction of terms. What is the republican form of government of the people by the people? But how can the people govern. How exercise sovereignty, except they have the knowledge requisite to that end? Sovereignty requires as much intelligence when exercised by the people as a whole as when exercised by a single individual; it requires more. The monarch governs according to his will, not necessarily with that broad intelligence demanded by the public good. Government for the people by the people implies that degree of popular intelligence which will enable the masses of men to comprehend the principles and to direct the administration of government in such a way as to promote the general welfare. Republican government therefore requires a higher degree of intelligence on the part of the sovereign than any other form. That sovereign is the whole body of the people. How, then, can the republican form of government exist and continue to exist unless from generation to generation the citizen sovereigns are educated?

I hold, Mr. Speaker, that the General Government, under the power granted by the Constitution of the United States, possesses the right of judiciously expending a part of its revenue collected from the people in the great interest of educating the people.

There may be those upon this floor who will declare in favor of State sovereignty in this particular, as they have in some others of vital importance.

While I am willing to accord to the States all the rights which the Constitution guarantees to their sovereignty as independent States, I am unwilling to draw the line between the national and the State jurisdictions in this vital matter, as I have been in others of political moment.

While I disclaim any intention of advocating a centralized form of government, which sooner or later would absorb the powers of the States, I do claim for the National Government all the powers and rights guaranteed by the Constitution, either express or implied, and which have been either settled by the decisions of the highest courts of the land or by the arbitrament of the sword. Among these delegated rights is that of self-preservation, and as ignorance is the father of crime and education and intelligence is the mother of virtue and order, it is clearly the right and duty of the Government to instruct the ignorant, to prevent crime and maintain its own existence. No greater crime was ever committed than that which struck the parrioidal blow at the life of the nation and left the South blackened and wasted by the fires of war and her soil red with fraternal blood, and the whole land, like Rachel, mourning its dead.

I have often said, and I now here declare it to be my belief, that had the Southern population been as well educated at that time as at no distant day it will be, had the colleges, seminaries, and free schools that existed in other portions of our country existed in that section, there would have been no rebellion, no war, no revolution. The educated masses would have known and understood too well the power of the Government and the sentiment of mankind to have entered so rashly and unsuccessfully as they did into a bloody internecine strife for the perpetuation of an institution which had been doomed to early and irreparable destruction. Upon the question of self-defense Senator BLAIR very clearly states the proposition:

The right of self-defense, which is the right of self-preservation, is the right to live and to be. The right of the people to be at all implies and includes the right to constitute and maintain the state—that is to say, government—and to prescribe its form, for human existence is impossible without government. The governing power must know how to govern or it cannot govern. Can a man do that which he knows not how to do? The people have distributed the functions

of government between the national and the sectional or the State authorities, and have retained in themselves the initial exercise of all power through the ballot. The ballot is the republican form of government, both in the nation and in the State.

Intelligence is necessary in the individual, who is the sovereign in the one as well as in the other. The right and duty of the national portion of the Government to preserve itself, and of the individual to preserve it and to exert his sovereignty through its forms perpetually, are absolute. It is the right and duty of the whole to preserve the whole, and the right and duty of the whole to preserve the whole implies the preservation of all the parts by that whole, to the existence of which all the parts are necessary.

But the right to educate the child throughout the nation is the right to preserve the Government and the nation. That right cannot be curtailed. It is geographically coextensive with the jurisdiction of the Government itself, and self-preservation compels its exercise by the National Government whenever there is failure for any reason on the part of the parent and the State.

The bill now before the House, Mr. Speaker, as reported by the Committee on Education and Labor, proposes that for five years next after the passage of the act there shall be annually appropriated the sum of \$10,000,000 to aid in the support of free common schools, which sum shall be known as the common-school fund; that the Secretary of the Treasury shall annually apportion this sum among the various States and Territories according to the number of their population of ten years of age and upward who cannot read and write, as determined by the Tenth Census of the United States. The bill further provides that before any State or Territory shall be entitled to receive its share of said fund it shall have provided by law for the free common-school education of all its children of schoolage, without distinction of color, for at least three months in each year, and the sum to be received by the said State or Territory shall be graduated according to the sum expended therein the previous year for common-school purposes. It also provides for the education of teachers in normal schools and teachers' institutes. It has also guarded against the misappropriation of the funds by any State or Territory as follows, to wit:

First. That it shall have applied all moneys by it previously received under the provisions of this act in accordance therewith.

Second. That it shall have caused to be made such reports to the Commissioner of Education concerning the condition of the schools in the same, on or before the 1st day of August in each year, as said Commissioner of Education, under the direction of the Secretary of the Interior, shall deem desirable; and shall especially report for each county as follows: The number of public schools of every grade; the whole number of days actually taught in each during the year preceding; the total amount received from State taxes and from local taxes and the total amount expended for educational purposes in the preceding year; the total amount expended for white and colored schools separately; the number of public-school buildings owned and hired, and the character, condition, and value of the same; the number of children, white and colored, male and female, in attendance on the public schools, and the length of attendance; the number of male and female teachers, white and colored, employed at the same time and at different times in the same year, with particulars as to qualifications of same; the number of school libraries and the number of volumes therein; the branches taught and the text-books used; the total amount of wages paid to teachers, male and female, white and colored.

Sec. 6. That the Commissioner of Education shall prepare forms of such blanks as shall facilitate the making of the reports herein provided for, and transmit the same to the State and Territorial authorities.

Sec. 7. That in such States or Territories as shall maintain separate schools for white and colored children the money so apportioned shall be divided according to the respective number of such white and colored children in such State or Territory.

Sec. 8. That no part of the money so received from the United States shall be expended in the purchase of real estate, the construction or repair of school buildings, or in paying the salary of any public officer not engaged in teaching.

Sec. 9. That in case any State or Territory shall misapply or misappropriate the money, or any part thereof, received under this act, or shall fail to comply with the conditions thereof or to report as herein prescribed, such State or Territory shall forfeit its right to any subsequent apportionment by virtue hereof until the amount so misapplied or misappropriated shall have been replaced by such State or Territory and applied as herein required; and until such report shall have been made all money so retained and not paid to such State or Territory shall be kept separate in the Treasury until disposed of by Congress.

Sec. 10. That on or before the 1st day of September of each year the Commissioner of Education, under the direction of the Secretary of the Interior, shall certify to the governor of each State and Territory whether it is entitled to receive its apportionment under this act, and, if so entitled, the amount of such apportionment, and it thereupon shall be entitled to receive the same; but such certificate shall not be issued until all the requirements of this act referring to the duties of the officers of such State or Territory shall have been complied with.

Sec. 11. That the amount apportioned to any State or Territory and certified as herein provided shall be paid on or before October 1 of each year, upon the warrant of the Commissioner of Education, countersigned by the Secretary of the Interior, out of the Treasury of the United States, to such officers as shall be by the laws of such State or Territory entitled to receive the same.

Sec. 12. That the Commissioner of Education shall annually report to Congress the information received by him from the reports of the school officers of the several States and Territories provided for herein, together with such recommendations as will in the judgment of the Commissioner subserve the purposes of this act.

Sec. 13. That there is hereby appropriated the sum of \$10,000,000 for the year commencing September 1, 1882, which shall be apportioned as directed herein; and those States and Territories which have provided by law for the free common-school education of their children of school age, without distinction of color, shall be entitled to their apportionment of said sum, all other requirements precedent to the right to receive such apportionment being hereby waived for the year 1882.

Sec. 14. That any State signifying its desire that the amount allotted to it under the provisions of this act shall be appropriated in any other way for the promotion of common-school education, in its own borders or elsewhere, its allotment shall be paid to such State to be thus appropriated: *Provided*, That its Legislature shall have first considered the question of its appropriation to the general fund for use under the provisions of this act in States and Territories where the proportion of illiterate persons is more than 5 per cent. of the whole population.

It will be observed that the provisions of the foregoing bill are ample and complete to secure the faithful expenditure of the money appropriated by it. How necessary this appropriation is, in accordance with the terms and spirit of the bill, may be determined by the last census reports. That census shows there are 6,239,958 people of this country above the age of ten years who cannot write, nearly one-eighth of the entire population of the United States. It is fur-

ther shown that 4,715,395, or 75 per cent. of the entire amount, are in the recent slave States, which contain but 36.8 per cent. of the population of the country. In six of these States more than one-third of the population above the age of ten years are illiterate, while in the Territory of New Mexico one-half of them cannot write.

Of the white population of the country only 6.96 per cent. cannot write, while 47.7 per cent. of the colored population are in that condition. And yet the colored race has made wonderful strides in educational progress since the close of the war. Considering their abject state of ignorance during the days of slavery, their progress toward the acquirement of an education has been remarkable, as the figures of the census returns exhibit. It will be seen that since the close of the war 53.3 per cent. of the colored people have acquired an education sufficient to enable them to read and write.

With regard to the voters of the late slave-holding States, the following table furnished the committee by the Superintendent of the Census exhibits the extent of illiteracy:

States.	Total males of 21 years of age and upward.	Number of males 21 years and upward who cannot write.		
		White.	Colored.	Total.
Alabama	259,884	24,450	96,408	120,858
Arkansas	182,977	21,349	84,300	55,649
Delaware	38,298	2,955	3,787	6,742
Florida	61,699	4,706	19,110	23,816
Georgia	321,438	28,571	116,516	145,087
Kentucky	376,221	54,956	43,177	98,133
Louisiana	216,787	16,377	86,555	102,932
Maryland	232,106	15,152	30,873	46,025
Mississippi	238,532	12,473	99,068	111,541
Missouri	541,207	40,655	19,028	59,683
North Carolina	294,740	44,420	80,282	124,702
South Carolina	205,789	13,924	93,010	106,934
Tennessee	330,305	46,948	58,601	105,549
Texas	380,476	33,085	59,669	92,754
Virginia	334,505	31,474	100,210	131,684
West Virginia	139,161	19,055	3,830	22,885
Total	4,134,125	410,550	944,424	1,354,974

The following statement derived from the foregoing table shows the ratio of illiterate males of the age of twenty-one years and upward in the States named. There being but few foreigners in these States, nearly all of these persons are citizens of the United States, and voters. This statement was prepared by the Committee on Education and Labor of the House of Representatives:

Ratio of illiterate males twenty-one years of age and upward.

Alabama	46.7	Mississippi	46.7
Arkansas	30.4	North Carolina	42.3
Delaware	17.6	South Carolina	51.9
Florida	38.6	Tennessee	31.9
Georgia	45.1	Virginia	39.3
Kentucky	26.0	West Virginia	16.4
Louisiana	47.4	Missouri	11.0
Maryland	19.4	Texas	24.3

The average ratio of illiterate males of the ages named in the above States is 32.3. Of the above illiterates 69.7 per cent. are colored, and 30.3 per cent. are whites. In ten of the above-named States more than 30 per cent. of the voters are illiterate. In six of them the illiterates are about 50 per cent.

In South Carolina 52 per cent. are illiterate. The State of Alabama has 120,858 illiterate voters. Its popular vote in 1880 was 151,507.

The State of Georgia has 145,087 illiterate voters. Its popular vote in 1880 was 155,651.

The State of Mississippi has 111,541 illiterate voters. Its popular vote in 1880 was 117,078.

The State of Louisiana has 102,932 illiterate voters. Its popular vote in 1880 was 97,201.

While it is true that in many of the States not one-half of those entitled to vote actually did so, yet the wonderful nearness of the number of illiterates to the number of those who exercised the right of suffrage is startling.

The truism that no government which rests upon universal suffrage can long continue unless the suffragists are intelligent, in the light of the above facts presses itself upon our attention with renewed force. The words of James Madison, uttered in 1826, are a present warning: "A popular government without popular information or the means of acquiring it is but a prologue to a farce or tragedy, or both." Nearly half a million of the white and almost a million of the colored voters in the South cannot read the ballots which they cast. But thirteen years have elapsed since the latter class was given the ballot. At that time all of them were grossly ignorant not only of letters but also absolutely devoid of all knowledge of the rights and obligations of citizenship. During the last ten years the number of illiterates in the country has increased about four hundred thousand, though the percentage of illiteracy to the whole population has decreased nearly 2 per cent. It would, however, take forty years to dispel this illiteracy at this rate of diminution.

The Committee on Education and Labor, in their report to the House accompanying the bill in aid of common schools, state that the total amount raised by taxation and expended for the support of schools in all the States and Territories was \$75,574,048. Of this amount only \$9,266,126 was raised in the late slave-holding States. The amount per capita raised in the States and Territories was \$2.09. If the South raised this year the same amount as in 1880 and to that there be added the amount they would receive from the bill before the House, they would still be compelled to raise more than two and one-third times as much as both these amounts in order to bring their per capita up to that of the Northern States.

Owing to the great mass of illiteracy in the South they need to expend much more than in the North, and yet there is a great bar-

rier in the South in the way of educational progress from the great want of funds to support and maintain schools. In many sections the people are poor and entirely unable to support common schools for any adequate period of time. Such are entitled to the sympathy of all more favored people.

The wastes of war were such that a portion of the wealth of the South was swept away, and while her people are struggling to advance the cause of education their progress is impeded and in many cases their efforts rendered futile from the want of funds to push forward the great work. In most of these States they have been compelled to begin at the foundation to build up a proper school system, and they have found the work arduous and difficult from the causes indicated. They are also at greater expense from the fact that the school system is separated into schools for white and colored, and there is also a great want of trained and competent teachers. The report of the Committee on Education and Labor upon this point, as well as upon others, is wise and should command the attention of the House irrespective of party, as it will certainly command the attention of the country, inasmuch as this question, as I have already shown, underlies the very fabric of our free institutions. I desire to call the attention of the House to the following portion of that report:

The committee believe that the state of facts detailed shows an emergency with which the people where illiteracy so greatly exists cannot at this time successfully cope; that it is a matter of the greatest concern to the whole nation; that its effects are by no means confined to the limits within which illiteracy is so vast, but that it is a serious menace to the prosperity and safety of the Government itself. Your committee believe that the present state of things invites to social and political disorder, and in times of business depression might lead to infinite mischief and lasting disaster to property. General intelligence will avert such dangers, but general intelligence cannot be expected without sufficient schools, and they cannot be maintained at the present time without assistance from the General Government.

Your committee agree that that system of schools is best which leaves the raising and expenditure of funds for school purposes nearest to the districts or towns which are to expend them, subject to general laws and to a superior supervision, and that funds raised from sources outside and independent of those who expend them are not so well or judiciously expended as those arising from local taxation. But the present situation is abnormal. The needs are urgent and beyond the power of local or State authority to adequately deal with. Citizenship has been bestowed by national enactment, and the nation, in order to promote the general welfare of all, should aid to citizenship the gift of instruction.

Having made 4,000,000 (now increased to 6,750,000) against lately enslaved people, a potent force in our political life, it is not only an imperative duty which the nation owes to itself but an act of justice to those of whom we require the duties of citizenship, that the means of education shall be placed within their reach. But in doing so local effort should be supplemented and not supplanted. We therefore do not recommend a national system of schools or of education. We propose to aid and encourage efforts already being made to assist those who are helping themselves, and we do that solely upon the ground that the local and State authorities are not at present able to properly deal with the subject. The committee thinks that as soon as the States have become able to support sufficient schools that all national aid should be withdrawn. It also believes that in five years such a change may have been wrought that no further need will exist for national aid.

In 1870 Congress passed a resolution to inquire into the state of education in the South. But not until the census of that year was published was the true condition of the Southern States and the country revealed. The House of Representatives, at the second session of the Forty-second Congress, passed a bill to create an educational fund from the proceeds of the sale of the public lands and to expend the interest upon the same for the education of the people. The bill did not pass the Senate. At the last session of the Forty-sixth Congress a similar bill passed the Senate but failed to be reached in the House. Opposition to the first bill was based upon a fear that in appropriating the proceeds of the public lands the interests of future settlers upon them might be injured, and also upon a belief by some that the bill was an interference by the General Government with the local concerns of the States.

The bill now reported has the unanimous support of the committee. It does not appropriate money from any special source; it does not make a perpetual fund; it is for temporary support only. It directs that \$10,000,000 per annum shall be appropriated directly from the Treasury for five years and shall then cease. It is to be distributed to each State in that proportion which the illiteracy of each State and Territory bears to the total illiteracy of the country, as shown by the last census. (The amount due to each State is shown by a table hereto annexed.) It is to be paid to the proper officer of each State and to be expended by State officials under State laws. It is all to be used for support of common schools except 5 per cent. thereof, which may be used for the instruction of teachers in normal schools or otherwise. It must be divided proportionally between white and colored schools and pupils. None of the fund shall be used to build or repair school-houses or to purchase sites or pay the salary of any officials except teachers.

The conditions preceding the right of a State to receive its proportion are that it shall have provided by law a system of public schools.

That it shall have supported schools for at least three months during each preceding year, and shall have expended at least as great a sum of money as it receives.

That it shall also report yearly to the Commissioner of Education certain statistical information in regard to schools, so that Congress may know every year how the money has been expended, and may be informed as to the general state of education.

The late slave States will receive \$7,556,773 out of the whole amount. It is believed that this sum will enable them to support schools for six months every year when added to the amount raised by State or local law, and in some of the States for a longer period. The Government will be at slight additional expense in distributing this sum, as it is to be distributed through the existing Bureau of Education.

Your committee think that the power of Congress to make this appropriation will not be questioned. From 1785 until now Congress has granted section 16 of every township in States containing public land to those States for school purposes. It has granted land for universities. And in granting land for agricultural colleges by the law of 1862, it attached conditions to the grant as to the kind of instruction to be given, and also required that certain reports should be made to Congress. It has also in several instances granted money, the net proceeds of lands, for school purposes.

The number of acres of land granted for schools, the sixteenth and thirty-sixth sections, and for universities and agricultural colleges, specifically is as stated by the Commissioner of the General Land Office, (47,431,718.) This is exclusive of grants of the proceeds of sales of lands which have in a few instances been given. At a dollar and a quarter per acre this is not a magnificent sum.

These gifts, however, derive their value more from their recognition of the principle of national aid to public education than from their being commensurate with the needs of the people. These grants have been of great assistance to young and struggling States, and in some of them have been the foundation of successful and flourishing systems when supplemented, as they have been, by adequate local

taxation. None of the original thirteen States, or Maine, Vermont, Kentucky, or Tennessee, received any public lands for school purposes, except for agricultural colleges, under the act of 1862. Those States would receive under this bill \$5,580,729 every year.

Your committee beg leave to suggest that the circumstances surrounding this subject indicate that if the Government is to extend aid at all it should do so at once. Very few children remain in the public schools after they are fourteen years of age. Year by year the great army of ignorant, illiterate citizens is increased from below, from the children of last year and the year before. That illiteracy degrades our citizenship. It retards our material progress. It weakens private and public morality. It threatens the stability of law and order. President Monroe's words are still pertinent: "Let us by all wise and constitutional measures promote intelligence among the people as the best means of preserving our liberties." Without the aid proposed by this bill illiteracy will not be perceptibly diminished for many years. In the meantime the perils arising from an ignorant ballot are ever present and threatening. It is the earnest conviction of your committee that the bill should at once become a law.

It is unnecessary, Mr. Speaker, to elaborate this question any further. It is of such vital force and overshadowing importance to the interests of the whole country that it ought to have the careful attention of not only Congress but intelligent people everywhere. We all have a duty to perform to our common country, which among all nations of the earth is the nursery of free institutions. All that we have ever gained has been through the education and enlightenment of the people, and as the hope of the enslaved and benighted the world over rests upon the perpetuation of our own form of government, how important it is by every means in our power we should aid in the maintenance of a high standard of popular education.

What is the expenditure of this sum of money compared with the blessings that will flow therefrom? How many households will be brightened! And with what pride and joy shall we all look upon our country when intelligent and educated freemen shall compose our voting population. What we shall possess ourselves we shall maintain for mankind, and our institutions will grow stronger and grander as time rolls on. Generations of men may rise and fall, we who stand here to-day advocating this great cause may be gathered

to our fathers—yea, the very Dome that rises above us may have crumbled into dust—but a free people, with their free institutions, will have survived the wasting wreck of time through the benign influences of education and culture.

All the sages of our country have advocated the adoption of a measure of this character and have been the friends of the common-school cause.

Washington and Jefferson and Madison, and the elder and younger Adams, and all the wise and great men of the past who have enrolled their names in American history have been earnest advocates of the common-school system. And when we look into the lives of nearly all the men of a later period who have achieved renown in the forum and in the field, and in the branches of material industry, we find their only alma mater to have been the common schools.

It has been the nursery of the men who have cut their way through all obstacles to fortune's summit. Sir Thomas More said:

If you suffer your people to be ill-educated and then punish them for those crimes which flow from ignorance, you first make thieves of the youth of your land and then punish them for being such.

But for—

Noble youth there is nothing so meet
As learning is, to know the good from ill;
To know the tongues and perfectly indite,
And of the laws to have a perfect skill;
Things to reform as right and justice will;
For honor is ordained for no cause
But to see right maintained by the laws.

Then, Mr. Speaker, let us perform our duty by the early passage of this bill, and by so doing we will have performed a duty to ourselves, our children, and our country; and no statute recorded in the archives of the nation will have reflected more honor upon us, as the representatives of the people, or from which shall flow perennially a greater stream of rich blessings in every section of our common country.

Illiteracy in the United States, (census of 1880.)

States and Territories.	Total population.	Total population who cannot read, ten years of age and over.	Percentage of total population who cannot read. Nevada, the Land of Silver—Various Topics of General and Local Interest Discussed.

SPEECH
OF
HON. GEORGE W. CASSIDY,
OF NEVADA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, August 5, 1882.

On the bill (S. No. 911) to provide for the erection of a public building for the use of the United States courts, post-office, and other Government offices in the city of Carson City, in the State of Nevada.

Mr. CASSIDY said:

Mr. SPEAKER: I must invoke the courtesy of the House while I ask to take from the Speaker's table for present consideration Senate bill No. 911, which provides for the construction of a public building at Carson City, the capital of my State. Carson is the permanent capital of Nevada, being made so by constitutional provision. It is not a large town, but it is permanent and growing.

Every argument that can be urged for the erection of a public building at any other State capital is equally applicable to this case. Indeed many stronger arguments may be advanced in behalf of this bill. I do not hesitate to say, sir, that it is the most meritorious of its class that has been brought forward here this session.

The whole State of Nevada comprises but a single district for judicial, revenue, land, and other Federal purposes. We have no building of the character contemplated in this bill in any part of the State. The Government is to-day paying over \$3,000 per annum in rents for poor, unsafe, and unsuitable quarters for its officers in that State. Nor is there any safety from destruction by fire of the records of any of these departments. To replace the books and papers in a single department would cost more than the total sum asked for in this bill, to say nothing of the delay and confusion resulting to the public business.

It is the purpose of this bill to group together in one safe, fire-proof, commodious building at the capital the heads of all the Federal departments and bureaus in the State of Nevada. I submit to the practical judgment of the House, Mr. Speaker, that it would be true wisdom and economy on the part of the Government to make this appropriation, just such an exercise of pure business principles as any private business man would bring to bear under similar circumstances, thus guaranteeing safety and comfort in the administration of the Federal business in that State, saving more than \$3,000 a year to the Treasury and contributing immeasurably to the general welfare in a patriotic sense by emphasizing constantly the dignity and grandeur of this great Government in an imposing edifice, everywhere good assets, and which should not be withheld from any State in this Union.

It may be thought that because our population is comparatively small there is no pressing necessity for this building. Allow me to disabuse the minds of gentlemen on that score. There is not a Federal court in America where so many important suits are litigated as in the United States courts in Nevada. The United States district court especially is kept in almost continuous session, and it is called upon to hear and determine many mining suits involving millions of dollars.

As some of you perhaps know, our State is almost exclusively a mining State. Substantially all of our mines are owned and worked by corporations. Most of these corporations have their headquarters in San Francisco. They are therefore "foreign corporations," and have the right under the law as it stands to-day (and it is an outrageous provision which permits it) to transfer all cases to which they may be a party to the United States courts. The moment one of these California companies comes in conflict with a citizen of Nevada that moment the case is taken to the United States district court at Carson, mainly with the view in many instances, I regret to say, of securing delay, harassing the poor litigant and multiplying his costs. This is the fault of the law, but as it is in the interest of the powerful corporations of the country we may never hope to see it corrected. As an evidence of the great volume of business of this character, let me say that there has been organized in San Francisco alone, first and last, more than ten thousand mining companies to carry on the business of mining in Nevada.

Why, sir, I have known the United States district court at Carson to be occupied more than three months in the hearing of a single important mining case, in which the legal fees alone amounted to more than \$100,000 on a side. Expert witnesses on geology and kindred subjects are frequently placed on the stand from all parts of this country and Europe, whose fees range from \$5,000 to \$20,000 each, according to prominence in their profession and the light they may be able to throw upon the question at issue.

It is also pertinent to remark in this connection that our last United States district judge in Nevada, Judge E. W. Hillyer, a very able, upright, and conscientious jurist, who gave universal satisfaction, absolutely broke down and died under the great weight of his official duties. I only allude to these things to show that our court transacts a vast amount of important business and that there exists an imperative demand for a suitable and proper building in which to conduct it.

The same is true of all other United States officers in that State. In short, we have a United States circuit court, a United States district court, clerk, marshal; United States surveyor-general, with his corps of clerks, surveyors, and draughtsmen; a full complement of United States revenue officers, and the local post-office, all of which may be properly accommodated in a building such as is proposed by this bill, and in the mean time work a saving to the Government of \$3,000 per annum. So much for the measure immediately under consideration.

And now, Mr. Speaker, with the indulgence of the House I propose to direct attention to some other matters of importance to the people and State which I have the honor to represent upon this floor. As I proceed I shall take occasion to correct some of the erroneous impressions which have grown up in the minds of our brethren of the East in regard to that new Commonwealth and its people. I am not unmindful, sir, that certain unscrupulous public prints, of metropolitan assumption, published in the eastern quarter of this Union, have iterated and reiterated that my State is steadily deteriorating in population and common political honesty. In this House also, in the earlier part of the present session, while the Congressional apportionment bill was under discussion, almost every speaker had some disparaging allusion to make to the insignificance of Nevada's population.

I have no fault to find with strictures of that character, because they involve no material departure from the real facts in the case. But when the good name and integrity of the people who have honored me with a seat in this body are assailed, it is manifestly proper in me to repel so gross a slander and hurl it back with such emphasis as every deliberate libel deserves. One speaker, the honorable gentleman from South Carolina, Mr. Tillman, now no longer of us, but for whose great ability we all conceived and felt the most profound admiration, went so far in his attack on political systems as to characterize my State as one of the "rotten boroughs of the West." I was moved to reply at the moment, and do so now, that Nevada was admitted into the Union to aid in suppressing the rebellion which his State inaugurated. That, Mr. Speaker, tells the whole story. It explains fully why we are of the great sisterhood of States. There never was any pretense on the part of our people or any one else that we possessed the requisite population entitling us to assume the grave responsibilities of statehood. We did not come in on that basis. We made no concealment of our numbers; neither did we attempt to augment them. Our status as to population was well understood.

We were admitted partly to give the party of the Union the aid of two additional members in the Senate and partly to exemplify a great living principle, namely, the indissolubleness of the American Union; to demonstrate to the world that while certain of the States were endeavoring to sever their connection with the Union others were willing to come in; that the Government could prosecute a great war to perpetuate its own existence and at the same time add new stars to its ensign; that the defiant strength and unconquerable patriotism of the Union were symbolized in the admission of the Silver State amid the throes of the greatest civil conflict known to history, attesting unanswerably, be it said to the imperishable honor and glory of the loyal hearts of the nation, that the Republic in the direst hour of that stupendous struggle was never for one moment despaired of.

History furnishes but few parallels of this defiant confidence in the ultimate success of a great cause under adverse circumstances. I recall at this moment but one, Rome, in the pride of a glorious renown, as the conqueror of the world, supplies an incident of unwavering confidence and matchless valor. With the imperial city beleaguered by a hostile foe, out through one of her gates marched re-enforcements for her armies of conquest in a distant land. Illustrations of such energy and iron will are rare; ours, in the admission of a new sovereignty in the very carnage of battle, being, in my judgment, the nearest approach to it. Indeed, sir, Nevada has been not inaptly termed the "battle-born State." Unquestionably she is the offspring of war. Called into being under such circumstances it might reasonably be expected that she would be regarded as the favored child of the Union. But such, I regret to say, has not been the case. The same liberal policy pursued by the Government toward other new States and Territories has never been extended to Nevada. As a State we have little to thank the Federal Government for. We have never received one dollar of this Government's bounty, if I except the bill recently passed, after a hard struggle, to audit certain war claims which had gone unrecognized and uncanceled in the main for twenty years. On the contrary, sir, the Government is legally and equitably indebted to my State and people in large sums which it never thinks of paying. In the very beginning, guided by that patriotic zeal which has ever characterized the people of Nevada, we assumed and paid a Territorial indebtedness, mostly due from the Government, amounting in round numbers to \$300,000. We equipped and sent to the war several regiments of soldiers, and have at various times expended large sums in suppressing Indian hostilities on our borders. Private citizens of the State also have been compelled in simple self-defense to expend vast sums in the aggregate for the same purpose, not one dime of which has ever been returned to them, notwithstanding it is clearly the duty of the Government to protect the lives and property of its citizens in every part of the country against the incursions of the murderous savage.

Bills which I had the honor to introduce early in the session cov-

ering these questions in one form and another still await action either in committee or on the Calendar of this House. And yet millions are poured out like water for magnificent buildings, rivers, harbors, and other improvements, necessary or the reverse, throughout all of the older States of this Union. By what moral right are the revenues derived from my people expended in the improvement of a river in Michigan or the repair of a harbor in New York or South Carolina? Of course I know you do it under the grant in the Constitution which confers upon Congress the right to "regulate commerce."

But let me digress to say that it is an immense stretch when you seek under that grant to improve every creek in the land capable of floating a flatboat, many of them with both ends in the same State. The fathers did not mean to give you any such power as that. What they meant chiefly was that you should have authority to regulate the interchange of commodities between the States and with foreign countries. But the other construction has been sanctioned until time and precedent have thrown around the practice the sacredness of unwritten organic law. It is the old doctrine about which the Whig and Democratic parties used to differ so violently—Federal aid to internal improvements. President Polk vetoed a river and harbor improvement bill on Democratic principles.

But we have all changed since then; we have all become Whigs on the subject of internal improvements. We find now the strictest of strict construction Democrats voting millions in a river and harbor bill if their own sections be not omitted from its provisions. Necessary appropriations to remove the snags and improve the navigation of national water-ways are right and are to be favored, but the system has degenerated into a great abuse by including unimportant streams, for no higher reason in many instances than to help gentlemen back to Congress. The good in the system seems inseparable from the bad, and the bad is yearly growing worse, as is evidenced in the river and harbor bill of the present session, carrying nearly \$20,000,000, as against \$11,000,000 in its immediate predecessor.

The commendable feature underlying the whole system is the general idea that the improved navigation of the water-courses in some degree stimulates competition as against the railroads and thereby cheapens the cost of transportation. This is a wholesome end if accomplished, but there are large sections of this country situated so remote from the great navigable rivers that we do not share in any perceptible sense these benefits. The great interior region of the continent from which I hail is thus situated. We are wholly dependent on one line of railroad, with such rates for transportation as it may see proper to establish. If water-ways are to be constructed and improved as a means of competing with railroads, why not the Government construct other railroads where necessary to compete with those operated by individuals or corporations? There is certainly as much logic in the one proposition as the other, and but little warrant for either based on a proper exercise of any legitimate function of government. Or, better and more practical still, why not the Government take possession, on just and equitable terms, of the roads it has already aided so munificently in building and operate them for its own benefit and in the interest of the people?

Government resting upon the affections of the people, as under our free system, cannot afford to be partial. It must be just to all of its citizens and treat every section with equal fairness and consideration. It will not do, under our new policy of liberal encouragement to internal improvements, to lavish the revenues gathered from all of the States and sections on a few highly-favored communities who may have the strength in this House by reason of superiority of numbers and facility for combination to vote themselves the substance of all the rest. We of the Pacific coast have felt our isolation and helplessness in this regard, and I for one would vote to-morrow to admit into the Union all of the Western Territories, without regard to their politics, if they could all come in together, simply as a means of augmenting the power of the far West in the legislative branch of the Government.

And let me say to you that they will all be here before you know it. As well attempt to turn back Niagara's leaping torrent as to think of a pause in the resistless march of empire toward the setting sun. There is no such thing as retrogression in the mighty West. The best blood and energy of all your States are going there. And they will continue to go because of the better opportunities and greater possibilities of that unsurpassed region.

My State for some years has been experiencing a season of depression in its chief industry, mining for the precious metals. A Republican Congress dealt us a severe blow when it demonetized silver. The whole country in fact was prostrated by the shock, for it must not be forgotten that the panic and tramp period came with demonetization in 1873, and flush times and unexampled prosperity, including specie resumption, followed remonetization by a Democratic Congress, in 1878. Nevada's chief product was degraded to the level of pig-iron, and stagnation in all of our industries at once ensued.

We have scarcely recovered yet from the blow. Miners and mining men left the State to take up other pursuits. And still we have grown steadily if not rapidly in population. We were admitted to the Union by proclamation of President Lincoln in March, 1864, with a total population of 39,000. In 1870 we had 52,000, and in 1880, as shown by the census now in course of publication, a little over 62,000. Unquestionably these figures do not do us full justice. Our State is fourth in size of all the States of the Union. She is four hundred and twenty miles long and three hundred and sixty wide at her greatest

dimensions, and has an area of 112,090 square miles, equal to 71,737,600 acres, being larger by 10,178 square miles than the combined area of the States of New York, Vermont, New Hampshire, Massachusetts, Connecticut, Rhode Island, Maryland, Delaware, and New Jersey.

Indeed, if we add to the aggregate area of these nine flourishing States that of the Kingdom of Belgium we will have only 1,188 square miles more than is contained in the single State of Nevada. With a population scattered through the mountains and valleys of so vast a region, it may be readily understood that a correct census is next to impossible; and besides, the compensation allowed the enumerators of the Federal census was wholly inadequate in a country so sparsely settled, and when the cost of traveling and other necessary expenses are so much greater than in the older States. The supervisor writes me, and I know him to be a truthful man, that he lost \$1,000 in the discharge of his duties. There can be no doubt, I think, that hundreds of miners and small parties of prospectors in the mountains were never seen by the supervisor or his deputies. There are always thousands of men isolated in this way who never vote even at our most exciting elections. A fair estimate therefore will fix our population in the neighborhood of 100,000; not as large as some of your Eastern Congressional districts, it is true, but quite as numerous in the matter of male adults. Males over the age of twenty-one largely preponderate in our population. On a full vote our voting strength may be set down at 25,000.

Since we have been arraigned and animadverted against for our insignificance, let us see how this compares with some of your districts here in the East. I commence with the first State on the list, Alabama, giving the returns as reported in the Congressional Directory, which may be accepted as good authority:

The first district of Alabama polled at the last election 17,800 votes; second district, 22,000; third district, 16,200; fourth district, 15,400; sixth district, 10,000; seventh district, 19,200.

The fourth district of Arkansas polled at the last election 16,400 votes.

The third district of Connecticut could muster but 22,000.

Georgia's average is not quite so good. In the first district they have 19,700 voters; in the second, 17,800; third, 10,300; fourth, 17,000; fifth, 19,000; sixth, 8,370; eighth, 11,148.

Louisiana also is a thin proposition. Here are the figures: first district, 15,700; second, 16,800; fourth, 14,000; fifth, 18,000; sixth, 12,200.

Maine, likewise, comes up a little behind, with only 16,800 in her second district, while in glorious Massachusetts the first, fourth, and ninth districts each exhibit a voting population of less than 23,000.

New Hampshire could scare up but about 16,000 in her third district.

The fifth, sixth, ninth, and other districts in the great State of New York show less than 22,000 votes. My friend Cox comes here on less than 24,000.

Brother RANDALL, also, from the third Pennsylvania district, is able to make a showing of only about 23,000.

All of the Virginia districts range from 17,000 to 24,000, while in Tennessee the eighth, ninth, and tenth districts poll each less than 20,000.

Vermont comes up with 21,000 in the first district, 23,000 in the second, and 20,000 in the third.

Little Rhode Island falls far behind all of the rest, with 7,000 in the first, and but 15,000 in the second district.

Many other States and districts might be enumerated with approximately the same results. But enough have been cited to show that Nevada has not the smallest population in the world. Indeed, the examination proves that there are more than forty members occupying seats upon this floor who have behind them a smaller voting population than I represent. Therefore let it be distinctly stated and understood, once for all, that Nevada is quite as important and has quite as many rights on this floor as the general average of Congressional districts throughout the Union. We shall demand equal rights, equal privileges, and equal consideration whenever there are Federal favors to be disbursed. We care nothing about your offices.

A great rush for place under the Government is not a characteristic of the enterprising, self-reliant people of my State. There are but five men and one woman in all of the departments here accredited to the State of Nevada. On an equal division among the States, according to population, our quota would be upward of sixty. But let that go; we are used to this sort of treatment; we have for twenty years been getting the worst of everything in the way of Federal patronage and fostering care in about the same ratio. We contributed more to the sanitary fund during the war than any other equal number of citizens in any part of this country; and our contributions were made in gold and silver, which went further at that time than double the amount in depreciated paper. We also sustained the faith and credit of the nation in those dark days with the entire bullion product of our mines, enabling the Government to pay the foreign bondholder his interest in hard money, thus maintaining its credit abroad and otherwise aiding materially in bringing it safely through the great civil war to the haven of peace and needed recuperation.

All of these things we have done for you, and you have done practically nothing for us in return. We have neither rivers nor harbors in Nevada, and you have never voted a dollar to that State for any public improvement whatever, if I except the United States branch mint, which is run at a profit to the Government. You hesitate about giving us a paltry appropriation for a public building at the capital of the State, a matter directly related to the functioning of Government, when, as I have shown, it would be greatly to the pecuniary interest of the Government itself to do so.

In nineteen years we have paid into the Federal Treasury about \$5,000,000 in internal revenue, and during the same time we have contributed a million more in payment for lands which were valueless to the Government until our operations made them valuable.

Comparatively not a dollar of this money has found its way back to our people, but has been absorbed in river and harbor improvements and the construction of elegant and costly custom-houses and magnificent post-office buildings in the older and more populous centers of the Eastern States. I protest that this is not fair treatment of the hardy pioneers of the frontier, who, braving all dangers and enduring every privation incident to subduing the wilderness, have added so largely and materially to the general welfare and common prosperity. I have here a table showing the mining products of the Pacific coast States and Territories, comprising gold, silver, and base bullion, from 1848 to 1881. It will be an interesting exhibit to many gentlemen in this House, and at the same time it will demonstrate the great importance of the mining industry in the West:

Mining product of the Pacific coast States and Territories, comprising gold, silver, and base bullion, from 1848 to 1881.

Year.	California.	Nevada.	Idaho.	Oregon and Washington.	Utah.	Arizona.	Total.
1852	\$59,000,000			\$500,000			\$59,500,000
1853	68,000,000			500,000			68,500,000
1854	64,000,000			500,000			64,500,000
1855	59,000,000			600,000			59,600,000
1856	63,000,000			700,000			63,700,000
1857	61,000,000			600,000			61,600,000
1858	59,000,000			500,000			59,500,000
1859	59,000,000	\$100,000		700,000			59,800,000
1860	52,000,000	500,000		1,500,000			54,000,000
1861	50,000,000	2,300,000		2,000,000		\$100,000	54,400,000
1862	51,500,000	6,300,000		2,200,000		200,000	60,200,000
1863	50,000,000	12,500,000	\$500,000	2,300,000		150,000	65,450,000
1864	35,000,000	16,800,000	6,400,000	2,500,000		150,000	60,850,000
1865	35,000,000	16,800,000	6,500,000	2,000,000		200,000	60,500,000
1866	26,000,000	16,000,000	8,000,000	3,000,000		200,000	53,200,000
1867	25,000,000	20,000,000	6,500,000	3,000,000		300,000	54,800,000
1868	22,000,000	15,000,000	7,000,000	4,000,000		500,000	48,500,000
1869	22,500,000	14,500,000	7,000,000	3,000,000	\$200,000	1,000,000	48,200,000
1870	25,000,000	16,000,000	6,000,000	3,000,000	1,300,000	800,000	52,100,000
1871	20,000,000	22,500,000	5,000,000	2,500,000	3,000,000	800,000	53,800,000
1872	19,049,098	25,548,811	2,514,090	2,131,086	3,521,020	143,777	52,907,882
1873	18,025,722	35,254,507	2,343,654	1,585,784	4,906,337	47,778	62,163,782
1874	20,300,531	35,452,233	1,880,004	764,605	5,911,278	26,066	64,334,717
1875	17,753,151	40,478,369	1,554,902	1,246,978	5,687,494	109,093	66,829,987
1876	18,615,807	49,280,764	1,674,361	1,211,443	5,207,519	1,111,992	77,101,886
1877	18,174,716	51,580,290	1,832,495	1,284,223	8,113,755	2,388,622	83,374,101
1878	18,920,461	55,181,949	1,868,122	1,287,035	6,064,613	2,287,983	85,610,163
1879	19,190,973	21,997,714	2,081,300	1,123,297	5,468,879	1,942,463	51,804,565
1880	19,276,166	15,031,621	1,894,747	1,164,805	6,450,953	4,472,471	48,290,763
Total	1,075,306,625	469,106,258	70,543,675	47,399,256	55,831,848	16,930,185	1,735,117,847

The gold and silver product of California, from 1848 to 1882, amounted to \$147,000,000.

The above table contains only the amount carried by express, and does not include that carried by mail or by private parties.

Every dollar of that vast sum represents indestructible wealth. If it costs \$2 to get one from the mines, which is not true, mining, guided by ordinary prudence and experience being as safe and as legitimate as any other pursuit or business, the \$2 going out among the people are not lost, and one more has been added to the wealth of the world. Herein lies the difference between mining and the other pursuits in which men engage. There can be no real wealth without production; all else is mere barter and exchange and interchange of something which already exists.

At the beginning of the session I remember to have heard the honorable gentleman from Kentucky, [Mr. CARLISLE,] in his great speech on the tariff talk about the "golden era" from 1850 to 1860, attributing the marvelous prosperity of that period to the system of tariff taxation which prevailed at that time. He drew a grand picture of the "golden era," but it occurred to me that he did not give due credit to the discovery and production of gold in California.

The gold and silver mines of the Pacific slope have created impulses that have advanced civilization in this country more than any of your high protective laws or free-trade theories. The arts have advanced, architecture has made new discoveries in applying its skill, manufacturers have been called upon to supply more people and with better garments, and the great mass of people have been immeasurably benefited.

Since the outpouring of the silver and gold from the mines of the West the people all over this land have in every way improved. Where one used to have the good things of life one hundred have them now. The whole plane of human comforts and enjoyments has been lifted up many degrees. The last thirty years have seen the world moved ahead in Christian civilization further than in any century before since history began, and all this, by a remarkable coincidence which gentlemen refuse to recognize, or, recognizing, refuse to acknowledge, bearing even date with the discovery of the precious metals on the Pacific coast.

In the face of these indisputable facts of history, Mr. Speaker, the war on silver continues, chiefly—let me qualify—by the Republican party. The President in his recent message to Congress said the coinage of standard dollars ought to cease, and his Secretary of the Treasury followed up with a similar recommendation. The President stated that \$402,000,000 in standard dollars had been coined under the remonetization act of 1878 and that but \$34,000,000 of them had found their way into circulation among the people. This would leave \$368,000,000 in the Government vaults. Drawing it as mild as possible, this is a financial misstatement. We were not told that there were \$66,000,000 of silver certificates in active circulation based on that assumed accumulation in the Treasury—every dollar covered by a silver certificate except \$2,000,000. And so it is always with the enemies of silver; they do not meet the question fairly on its merits.

We have not had, sir, since 1873, when the opposition, led on by the bondholders and national banks, first began to manifest itself, a President or Secretary of the Treasury who has been willing to give silver a fair chance in the monetary race, but instead all have been intent on crippling and debasing it in every way possible. A very large majority of the Republican members of this House and the Senate also occupy an attitude of like hostility to this solid indestructible money of the people. Look at what you have been doing at the present session on this subject. See this innocent-looking little bill emanating from the distinguished gentleman from Maine, [Mr. DINGLEY,] and subsequently reported favorably by him from the Committee on Banking and Currency. It will be a good campaign document for my State. It will serve to show the people out there how Republicans stand on the silver question. Here it is:

That from and after the passage of this act, and until an international agreement on a coinage ratio for the use of silver in full legal-tender coinage shall be made by the leading commercial nations, or until the equivalency of bullion between the standard silver and gold coins of the United States in the markets of the world shall be otherwise secured, the issue of silver certificates authorized by the act of February 28, 1878, shall be suspended: *Provided*, That the silver certificates now outstanding may, from time to time, as paid into the Treasury, be reissued on the deposit of standard silver dollars.

Sec. 2. That from and after the passage of this act, and until an international agreement on a coinage ratio for the use of silver in full legal-tender coinage shall be made by the leading commercial nations, or until the equivalency of bullion value between the standard silver and gold coins of the United States in the markets of the world shall be otherwise secured, the Secretary of the Treasury shall cause to be coined only such number of the standard silver dollars authorized by the act of February 28, 1878, as may be required to supply the demand for actual circulation, in lieu of the minimum coinage provided by said act.

That bill is backed up by a favorable report signed by every Republican member of the committee but one, I believe, and is on the Calendar of this House, to be reached and considered in due time. The Democratic members of the committee, of course, have joined in a minority report against its passage. Under that bill, with an unfriendly Secretary of the Treasury, such as we are bound to have while the Republican party remains in power, silver would be once more practically demonetized and destroyed as a circulating medium. It is unnecessary to elucidate. The bill carries its own meaning on its face. No man can mistake it. Under a sham and false citation it seeks to strike down the silver interest of the country. Instead of the coinage of \$2,000,000 per month as now authorized by law, the whole matter is to be left to the discretion of a Secretary of the Treasury whom everybody knows would not coin one dollar if given

the power to prevent it. It is the grossest injustice that we are not permitted unlimited coinage under existing law, instead of being restricted to \$2,000,000 per month. That is a concession which the friends of silver should not have made to the single-standard theorists, if it could have been avoided.

But the bill of Mr. DINGLEY's committee has a good deal to say about "equivalency of bullion." Let us see how widely they differ from the facts in this regard. Fortunately I have the proof at hand; I am fortified with certain official circulars and utterances from the Treasury Department. Secretary Sherman thought the people would not take kindly to silver, and he undertook to establish that fact. He failed utterly and had to recant. This is the way he went about it:

TREASURY DEPARTMENT, SECRETARY'S OFFICE.
Washington, D. C., September 18, 1880.

Until further notice the United States assistant treasurer at New York will pay out at his counter standard silver dollars or silver certificates, in sums of \$10 or any multiples thereof, in exchange for like amounts of gold coin or gold bullion deposited with him.

Upon the receipt by the Treasurer of the United States in this city of an original certificate of deposit issued by the United States assistant treasurer at New York, stating that there has been deposited with him gold coin or gold bullion in the sum of \$10, or any multiple thereof, payment of a like amount in standard silver dollars or silver certificates at the counter of any United States assistant treasurer designated by the depositor will be ordered.

JOHN SHERMAN, Secretary.

Now, let us see, Mr. Speaker, the practical effect of this circular. It was allowed to stand only a little over one month. On the 1st day of November, 1880, six weeks later, the Treasurer of the United States, Hon. James Gilfillan, in his annual report to the Secretary, had this to say of the exchange by the people of gold for silver certificates:

The demand for silver certificates, under the circular of the Department, dated September 18, 1880, authorizing their exchange for gold coin or bullion, has been quite extensive at New Orleans, Saint Louis, Chicago, and Cincinnati, and there were paid out at these points during the month of October \$3,485,000 in silver certificates for an equal amount of gold coin deposited in the sub-treasury at New York.

There you have it; 3,485,000 gold dollars exchanged for an equal number of standard silver dollars, or their representatives, at a single point, New York, in a fraction over one month; and yet the President and the Secretary of the Treasury, and Mr. DINGLEY and his committee, and a majority of the Republican party tell us that the people will not have anything to do with silver in any form, and that the coinage of standard dollars must be stopped until an "equivalency of bullion" is provided for! Humbuggery, pure and simple.

But let us follow the official record a little further. In his report to this House at the beginning of the present session the Secretary of the Treasury had to make this striking admission:

The Department has issued silver certificates at the several sub-treasury offices, upon a deposit of gold coin in like amount with the assistant treasurer at New York, and through this means certificates have been issued for nearly all the silver held by the Treasury. These certificates amount to about \$66,000,000, and are now outstanding.

In what particular is a lack of "equivalency of bullion" apparent in these transactions? Sixty-six millions of gold for sixty-six millions of silver, dollar for dollar even up, and no grumbling; and the privilege of exchange confined to one place, New York, and not extended to the other great financial and commercial centers of the country. What would have been the effect had the privilege been made general? Simply that you would not have had silver enough to supply one-tenth of the demand. As it was, you converted about all you had into gold at a single sub-treasury. Discussing this aspect of the case the Treasurer of the Government in his annual report (page 421) says:

The effect of these operations, so far as the Treasury is concerned, is to convert its silver dollars into gold, for the issue of silver certificates transfers the ownership of the silver dollars, which they represent, from the Treasury to the public.

Of course it does; and as a result that whole pile of silver up in the Treasury yonder is owned by the people who hold the silver certificates and not by the Government. Those people paid gold for it, dollar for dollar, and have the first mortgage on it. The silver certificate recites on its face—it is its form—that it is payable at the Treasury on demand in silver. So the man who parts with his gold for a silver certificate knows that he must get back silver and not gold if he desires to reconvert it into specie. Thus we are justified in assuming that the great mass of people who in less than one year paid into the Treasury \$66,000,000 in gold coin for \$66,000,000 in silver certificates estimated the intrinsic value of a standard silver dollar quite as high as that of a gold dollar.

The case admits of no other logical deduction. Why, then, is it that gentlemen, especially on the other side of the House, are continually asserting that there is a marked difference in the value and purchasing power of these coins, when all of our experience since remonetization in 1878 shows the reverse to be true? If your vaults are overflowing to-day with gold, it is because you have purchased it with silver, or what is equivalent, silver certificates.

But I am not yet through with that Sherman circular of September 18, 1880. I have another extract from the report of the Treasurer showing its beneficial results:

Comparing the condition of the Treasury September 30, 1881, with its condition on the same day last year, the most striking changes are the increase in the gold coin and bullion and standard silver dollars on hand and in the silver certificates

outstanding. Deducting the gold certificates actually outstanding, the gold belonging to the Government on September 30, of the last four years was \$112,602,622.20 in 1878, \$154,987,371.29 in 1879, \$128,160,085.77 in 1880, and \$162,552,746.41 in 1881. In 1880 the gold ran down nearly \$27,000,000, but this decrease was much more than overcome in 1881, when it increased more than \$41,000,000, reaching the highest point ever attained. This increase was largely due to the sale for gold coin in New York under the circular of September 18, 1880, of exchange on the West and South, payable in silver certificates.

More gold brought into the Treasury for silver. The plan worked admirably. Everybody wanted to get rid of gold and take paper based on standard dollars for it.

Again, Treasurer Gillfillan says, (and it will be observed that his ideas are not altogether in harmony with those of his chief, the Secretary:)

The gross amount of gold and silver coin and bullion held by the Treasury, without regard to the obligations outstanding against it, has ranged from \$163,969,444.70 in 1878 to \$222,807,368.01 in 1879, \$214,303,215.38 in 1880, and \$269,706,998.76 in 1881. The increase within the last year has been \$55,400,000, of which \$39,150,000 is in the gold and \$16,250,000 in the silver. The increase in the gold has been greater and in the silver less in the last year than in any year since the coinage of the standard silver dollar began.

Reasonably it was to have been supposed that any system which was found to make the obnoxious silver go and attract to the Treasury gold coin in such great abundance would be continued. But not so; the plan worked too well to suit the enemies of the money of the people, and the result was a second circular from the Treasury Department. This one came from Acting Secretary French, and it revoked the order under which gold and silver had become interchangeable. It is entitled Department Circular No. 108, and is as follows:

TREASURY DEPARTMENT, SECRETARY'S OFFICE,
Washington, D. C., November 1, 1881.

Until further notice the exchange of silver certificates for gold coin deposited at the office of the United States assistant treasurer at New York will be suspended, and Department's Circular No. 75, of September 18, 1880, is hereby modified accordingly.

H. F. FRENCH,
Acting Secretary.

Why this was done has never been explained, but evidently a change of policy had been resolved upon. It had been demonstrated in a remarkable manner, and in a remarkably brief period also, that silver and silver certificates were popular with the people, and something must be done to revive old prejudices and supply a pretext for hostile legislation. Hence we find the Secretary of the Treasury in his report to Congress hurling solid chunks of financial wisdom at us in this able style:

There need be no apprehension of a too limited paper circulation. The national banks are ready to issue their notes in such quantity as the laws of trade demand, and as security therefor the Government will hold an equivalent in its own bonds.

There we have it. The national banks must be allowed to furnish the money of the country. Two thousand soulless corporations must be permitted to assume the functions of the sovereign to the extent of issuing and controlling our currency, with the power to expand or contract it at will, which carries with it the further power of inflating or destroying all values with equal facility. The Secretary further adds:

The embarrassments which are certain to follow from the endeavor to maintain several standards of value, in the form of paper currency, are too obvious to need discussion.

It is recommended, therefore, that measures be taken for a repeal of the act requiring the issue of silver certificates, and the early retirement of them from circulation.

As is said elsewhere herein, the circulation of some sixty-six millions of silver certificates seems an inexpedient addition to the paper currency. They are made a legal tender for the purposes named, yet have for their basis about 88 per cent. only of their nominal value. There is no promise from the Government to make good the difference between their actual and nominal value.

In other words, the honorable Secretary assumes that the "flat" of the Government is lacking in twelve of the one hundred cents in the standard dollar; that is if we concede, which we do not, that the intrinsic value of these coined dollars shall be regulated by the price of raw uncoined bullion in the London market. And just here, while I am on this point of competition with the foreign bullion market, let me show you how the system works in practical operation. I find the whole case stated and illustrated in an ably conducted little daily paper in my State, the Silver State, quite as well and more forcibly than I could hope to present it. The article is based on a recent slight advance authorized by the Director of the Mint in the price of silver bullion at the Carson mint, and is as follows:

Silver bullion has advanced another quarter of a cent an ounce in the London market, and the Treasury Department has graciously made a corresponding advance in the mint rate for bullion at Carson, making the price per ounce at present \$1.133. English pig-iron can be delivered at any port on the Atlantic seaboard for \$15 per ton, but the Government imposes a duty of about 50 per cent. of its value on that article, to protect the iron-miners of Pennsylvania, Ohio, and other States from English competition in the home market, while the same Government compels the silver-miners, whose enterprise in discovering and producing the precious metals enabled it to resume specie payment and added hundreds of millions to the wealth of the nation, to sell their bullion at the price fixed upon it by foreign merchants.

The Government also, with that impartiality for which the monopolies which it created and the rings which wax rich under the protection of those who are paid for conducting it honestly tell the people it is noted, appropriates to its own use, with the exception of what is stolen by mint officials, the difference between the price paid the miner for bullion and the value of that bullion when made into coin. That difference averages about 20 per cent., which is sufficient to enable mine own-

ers, whose properties are now not more than paying expenses, or which are being worked at a loss, to declare handsome dividends. The miner who at present produces a silver bar which assays say \$1,000 is compelled to sell it for \$850 to the Government, which, as greedily as any monopoly that has been created and fostered by Congress, pockets the difference. People complain of railroad discrimination between persons and places and denounce it as outrageous, yet overlook the fact that it is no worse than the discrimination of the Government which protects the iron miners and manufacturers of the Atlantic States from foreign competition while virtually robbing the silver-miner of at least sixteen cents on every ounce of bullion that he produces; and, strange to say, right here in Nevada men whose success in business depends to a great extent on the prosperity of the mining interest for partisan reasons uphold the course of the Government.

That demonstrates most fully how the silver interest of this country is discriminated against by the Government and its officers under Republican rule and policy.

It is no greater sin, Mr. Speaker, to mine for gold and silver in the West than it is to delve for coal and iron in the mountains of Pennsylvania. In every conceivable aspect of the case ours is the higher industry of the two; it is better for the Government and better for mankind; it awakens hopes and possibilities that can never be experienced in the other, and finally it affords the chief if not only means by which a demand is created for the other. Our industry lies at the very base of your whole financial structure, without which there could be neither progress nor prosperity in any of the other manifold pursuits of life.

Under such circumstances rational minds might with reason expect the encouragement and fostering care of the Government to be extended to it and over it; but instead we find at least one of the great political parties of this country arrayed against it in almost solid phalanx and waging relentless war upon it at all seasons and out of season. They are not even endowed with that highest attribute of statesmanship, to be content with "letting well enough alone," as is forcibly illustrated by Mr. DINGLEY's little bill to put an end to the coinage of standard dollars and the issuance of silver certificates. Millions of protection thrown around the pig-iron and Bessemer steel of Pennsylvania, and unfriendly legislation for the precious metals of the Pacific coast!

This is your policy, gentlemen of the majority, and you all know it. We had these silver dollars of 412½ grains, 900 fine, from 1792 down to 1873, almost a century, when you clandestinely destroyed them in the interest of the bondholders and national banks. They were good enough and served their purpose well enough for nearly one hundred years; everybody was satisfied with them and there had never been one word of complaint against their use from the great mass of the people in all of this long period—a long period even in the life of a nation.

And now let me say, Mr. Speaker, that it was this blow against silver, more than any other single cause, that swept the Republican party from power in 1876. The people would no longer trust you; you had betrayed and stabbed them in a vital part, and not the most frantic flaunting of the bloody shirt would stay the exodus from your party ranks. Then you fought remonetization all along the line and prevented us from obtaining unlimited coinage, which had been the rule from the very beginning of the Government. But it was accomplished in spite of the great majority of your party; the record shows that two-thirds of your members in either House voted against it.

We hear little more of the subject, save in the ceaseless warfare of unfriendly executive officers, until the people, lulled into fancied security, permit you once more to assume control over every department of the Government. This accomplished, and your undying hostility again instantly becomes apparent, as I have already shown in the attitude of the President, the Secretary of the Treasury, and by the introduction of the Dingley bill and the favorable report of the committee thereon. It is to be hoped that our Democratic friends all over the Union will make this issue prominent in the coming elections, for in my judgment the thinking, tax-paying people of this country will not tolerate long in power any political party which seeks to strike down the silver currency of the land.

Recurring again, Mr. Speaker, to the report of the Secretary of the Treasury we have the recommendation that all laws authorizing the coinage of silver and the issuance of silver certificates should be stricken from the statute-books; and he tells us that "the national banks are ready to issue their notes in such quantity as the laws of trade demand." Of course they are; and to give them greater latitude in this direction is precisely the reason why it is sought to drive silver from the field. And will some gentleman tell me wherein a national-bank note is better than a silver note? A national-bank note is the promise to pay of the corporation emitting it. Behind that is the Government bond on which it is based, which is but another promise to pay. No adequate specie reserve is required under the law.

The whole system rests exclusively on the faith and credit of the nation. It is our debts that we sell or loan to the banks, and it is on this kind of capital that they go into business, in the mean time reserving to themselves the right to draw from the Treasury semi-annually in gold coin the interest on the bonds they are required to deposit as security for their circulation. Where is the reason for this sort of thing? What private individual would be guilty of conducting his business on such a basis as this? Why the Government go into banking by proxy when it could as well carry on the business as principal, saving in the mean time millions annually in interest

and other profits which now go to enrich the banks at the expense of the people?

But what, Mr. Speaker, is to become of the national banks when your bonded debt shall have been extinguished? What will they bank on then? The life of your longest bond expires in twenty-six years. What sort of currency are we to have when that interesting period shall have been reached? That it will be reached, if we maintain our present peaceful relations with the nations of the earth, admits of no question. Indeed, we shall hardly have time to face about until the retirement of the bonded debt shall begin seriously to affect the national banks. The twenty years' extension granted by this Congress will not save them; for if there is any one sentiment more fixed than another in the minds of the great mass of the American people, it is that the public interest-bearing debt shall be discharged, every dollar of it, as rapidly as the resources of the country will permit.

The end is already in view; it is only twenty-six years off, and our revenues are ample and to spare to meet every liability.

But it need not be expected that the banks will surrender without a struggle. They are firmly ingrafted upon the country, and it has already been demonstrated that they are not without powerful friends and advocates, especially on the Republican side of the House, to urge the system as the wisest and best that has ever been devised. They will desire to maintain at least the semblance of a basis, interwoven and intermixed with the credit of the Government, and this must naturally force an issue to perpetuate and extend indefinitely a very considerable portion of the interest-bearing debt. This is one of the coming, yea, pending, issues on which political parties must take sides.

Whether the banks or the people will succeed remains to be seen. If the latter prevail, then the money of the future will be gold and gold certificates, silver and silver certificates, and Treasury notes issued direct by the Government, and not through the medium of private corporations, as now. The bills of the national banks are predicated wholly, as I have shown, on the good faith and credit of the nation, on the Government's ability to pay. A foreign war or other disturbance seriously affecting and reducing the revenues could have but one result, namely, to depreciate their value and imperil their usefulness as a medium of exchange.

No such contingency is possible in the case of silver or silver certificates. Granting all to be true that the most pronounced enemy of silver can say, and there is always eighty-eight cents of intrinsic value, to say nothing of the Government's "fiat" stamp on the full one hundred cents, behind every standard dollar or its paper representative. Not being, therefore, subject to violent fluctuations, I do not hesitate to say that our silver currency can be made the best and safest money in the world. But its sphere generally must be enlarged. If you will not abolish your one and two dollar greenbacks, which is the correct thing to do, then we must be permitted to provide for the issuance of silver certificates in like denominations. This will create a demand for a largely increased amount of the product of our mines, thereby stimulating and rendering more valuable and important the mining industry throughout the West.

It is one of Nevada's greatest wants, next to full, unlimited coinage, and you can help us and at the same time help the people in every section of the country by conceding so reasonable a demand. I have a bill pending here which covers the subject fully, and I have strong faith that the good judgment of this House will give it favorable consideration when it comes up for passage.

In this connection let me remind gentlemen on the other side that none of your predictions were realized with reference to the effect of remonetization in 1878. You all predicted that it would bring disaster and ruin upon the country; that the whole supply of European silver would be dumped on our home market; that all of our stock of gold would be driven abroad, and finally that the date of resumption would be deferred, if not rendered altogether impossible.

Now, sir, it is patent to everybody that not one of these gloomy prophecies came true. On the contrary, the very reverse of each and every one of them has transpired, showing at least that you are not to be trusted as prophets on the subject of national finance. Instead of receiving the silver of Europe we have been exporting silver; instead of driving all of our gold out of the country we have been attracting and absorbing the gold of European countries at a rate never before known in the history of this Government; and instead of resumption being delayed it was an accomplished fact in less than two years from the passage of the act restoring silver to its proper dignity among the money metals of the earth. You have therefore proven yourselves incompetent financial doctors and are not to be trusted with the patient again. This much in behalf of the predominant interest of my State, an interest alike of general and local importance, contributing as it does in a high degree to the welfare and prosperity of all your States and every section of our common country.

And now, Mr. Speaker, I must crave the further indulgence of the House while I allude as briefly as possible to some other matters affecting my State and its relations to the Government and the other States of the Union. Much more deserves to be said than can be presented in a speech of usual length. I feel it to be my duty, as it is my pleasure, to meet and refute every false impression that finds lodgment or credence anywhere regarding the real condition of those whose representative I am.

Admittedly our State is an anomaly in the matter of population, but I have already pointed out the leading consideration which brought us into the Union. Certainly we could not have entered without an invitation.

Possibly we were all mistaken in some sense—both the Government and the people of Nevada. The discovery of the world-renowned Comstock lode had been followed by an immense influx of people. We all thought that this population would be permanent and that other sections, known to possess vast mineral resources, would be peopled as rapidly. We constituted at that time the Territory of Nevada, the same having been created in 1861. No Western people take kindly to a Territorial government. You have a practice of sending out to govern them a lot of splinted and spavined politicians, strangers alike to the people and the interests and objects to be fostered and promoted. In our case you sent among us, to put it no stronger, a grossly incompetent Federal judiciary. Our mining titles were unsettled and suits involving hundreds of millions in the aggregate had to be litigated.

Some of the decisions which followed caused widespread dissatisfaction and indignation, and the court soon fell far below par in the popular esteem. Under this state of affairs an elective judiciary—a home judiciary of our own choosing—began to be agitated, and a little later a movement for a state government had crystallized into form. When the constitution had been prepared and submitted, many voted for its adoption as the surest means of ridding themselves of the obnoxious Federal judiciary. Thus it was that we came in, and, being in, we are here to stay.

But it is a mistaken idea, sir, that Nevada has ever been an incumbrance or a burden to the Federal Government. Notwithstanding we are a small community, we have always been able to discharge every obligation incumbent upon us as one of the sovereign States. We have never cost you one dollar; we are ahead of you on general account. I have not the exact figures at hand, but I have been making some pretty close and safe estimates. I figure that since a State we have paid into the Federal Treasury in the way of internal revenue and from other sources \$6,000,000, and that our total mail service, never ample, United States courts, revenue officers, &c., have cost the Government less than \$3,000,000, thus leaving the Government a net profit of \$3,000,000.

This is not a large sum, I confess, but it is sufficient to serve my purpose in showing that Nevada has been more than self-sustaining. That is the sole purpose for which the estimate is brought forward, the manifold benefits and blessings other than financial proceeding from our membership in the great family of States being freely acknowledged. We are mutually dependent upon each other and we should all be mutually benefited by the compact. I am simply seeking to show that, small as we are, we are not costing the other members of the firm anything. How much more we have contributed to Pennsylvania and other Eastern manufacturing and protected States in the way of tariff exactions it would be difficult to determine, but the sum cannot fail to be immense, since we import everything we consume, from a lucifer match to a quartz-mill. We manufacture nothing within our borders for export save bullion.

As a State we are getting along quite comfortably. We have no bonded debt and owe no outside man in the world one dollar. Some of our State funds are indebted to other funds, but this is the extent of our liabilities. There are few of the great States of this Union that can say as much. I see the bonds of pretty much all of your States quoted daily in the Wall-street market. We have no debt to scale down and none to readjust. In this regard we may be a little out of fashion, but we prefer the old style. The finances of most of our municipal and county governments, also, are in a healthy, solvent condition.

Our people are strong-hearted, intelligent, and enterprising. The business of mining elevates, broadens, and strengthens all who engage in or come in contact with it. We acquire in ten thousand ways by practical experience all that the most profound scientist is able to gather from his books. Illiteracy, to the point of non reading and writing, is practically unknown to our population. The census shows that out of our total population there are but 3,760 people who cannot read or write. Of this number we have 3,518 Chinamen. Deducting the Mongolians, we have left only two hundred and forty-two persons who are without education. No State in the Union can approach this record; it is unapproachable anywhere under the sun. There are six of the old States, each with a population fifteen times greater than ours, which do not maintain as many daily papers as sparsely-settled Nevada. I could go on indefinitely drawing the parallel, and always to our credit. Enough has been said to show that we are better than our traducers.

Politically, we are of the liberal and progressive school. Independence of party is a marked characteristic of the people. There has not been a straight ticket elected, State or county, of either party in twelve years. The great mass of voters are a reading, thinking people, and therefore capable of deciding for themselves. The motto of all parties is a free ballot, a full vote, and a fair count. While the prizes to be won are as alluring as elsewhere, we have never been troubled with "bosses" or "bossism." We have no political "bosses" in Nevada and want none. Our pure mountain air is not promotive of their growth. They flourish better in the blighting political malaria of the great States and cities of the East. We

cheerfully accord to you the proud distinction of a more thorough knowledge of the uses of the "machine" than we possess.

False rumors touching the integrity of our Senatorial elections have also found expression from time to time in the Eastern press. I do not hesitate to say, Mr. Speaker, that the Legislature of Nevada has been as free of improper influences in the performance of this important duty as the Legislature of any other State, East or West, and in my opinion a great deal more so.

Five men, to wit, Mr. Stewart, Mr. Nye, Mr. JONES, Mr. Sharon, and Mr. FAIR, have represented Nevada in the other Chamber since her admission as a State. Messrs. Stewart, Nye, and JONES were all re-elected. We have had in all eight elections of a Senator of the United States, and, as remarkable as it may appear, we have never had but one contest in the Legislature for this high office.

It is the rule with us for gentlemen to announce themselves as candidates in advance of the primary elections, when the person receiving the indorsement of a majority of his party, as reflected in the nomination of members for the Legislature, is given a clear field. The struggle is conducted wholly before the people, and when thus determined the Legislature has never failed in a single instance to execute the people's will as expressed at the ballot-box. Stewart and Nye were our first Senators, elected by a Legislature overwhelmingly Republican, and both without opposition within their party. Stewart was elected for the full term and Nye for four years. Senator Nye coming up for re-election at the expiration of his first term, met with stout opposition from Mr. De Long, both before the people and in the Legislature. There were some vague hints and suspicions of an improper use of money in the Legislature, but definite charges were not made and no investigation was ever ordered. Both contestants having been poor men, the presumption is fair that all intimations of corrupt means were greatly exaggerated.

Senator Stewart succeeded himself without opposition within his party. Senator JONES followed Senator Nye. The Legislature was Republican by a two-thirds majority on joint ballot, and he had no opponent in that party. In like manner Senator Sharon succeeded Senator Stewart, the latter not being a candidate for a third term. In all of these contests the Democrats had candidates of their own who were supported at the polls and by the Democratic members of the Legislature. Two years ago, for the first time in our history as a State, a Democratic Legislature was chosen and a Democratic Senator elected, in the person of Hon. JAMES G. FAIR, as the successor of Hon. William Sharon. The State for some years had been gradually undergoing a change politically, which, added to the personal magnetism and great popularity of Mr. FAIR with the people among whom he had resided continuously for nearly a quarter of a century, served to turn what otherwise might have been an ordinary victory into a sweeping triumph.

And now, Mr. Speaker, there is a fair and logical deduction to be drawn from this recital of historical facts. Seven out of the eight Senatorial elections were uncontested, while the eighth was between poor men, unable to corrupt any one, if disposed to do so, which I decline to believe. It is thus shown to the satisfaction of all fair men, let me hope, that there has never been occasion or motive for the corrupt use of money in the Senatorial elections of Nevada. Every imputation of this character, therefore, is a gross and palpable libel on the fair name of the State and its people, and as such I most emphatically characterize it.

The people of Nevada are brave and generous. They have not yet learned the small, frugal ways of the East. Money worship is not a trait peculiar to them. Every man is a millionaire in hope. It would require more money to sway an election in little Nevada than was paid in 1880 for the entire "mule" crop of big Indiana. But enough of politics and political subjects. When I shall have called attention to some of the pressing wants of my State I will have concluded about all I desired to say.

Mr. Speaker, if we exclude Alaska, about four-tenths, within a fraction of one-half, of the entire area of the United States is so arid that all agriculture is dependent upon irrigation. The vastness of this arid region may be the better understood when I say that it is greater than all that section lying east of the Mississippi River. It stretches away from about the one hundredth meridian, in Kansas, on the east to the Pacific Ocean on the west. It is bounded at the south by the Republic of Mexico and at the north by the British possessions. Practically the entire public domain remaining open to settlement and sale lies within the limits I have described. It follows logically, and goes without saying, that the Government itself is the party chiefly interested in the reclamation of these arid and now worthless lands. There can be no sale for them until reclaimed, or at least until their susceptibility of reclamation shall have been demonstrated.

It occurs to me, sir, that no higher or greater economic question can engage the attention of this or succeeding Congresses. The future expansion and growth of this country is directly dependent upon the solution of this problem. The time is near at hand when it must be met and undertaken, not in a general sense, but in a limited, experimental way.

Our system, imperceptibly perhaps, until we turn back and count the mile-stones, has undergone a radical change. National aid to internal improvements is now the fixed policy of this country. That policy will never be reversed, no matter what party may succeed to

power. It is not a doctrine that will revolve backward, for the good and sufficient reason that a majority of the American people like it.

It is as permanently established as the other doctrine of protection to American industries to the extent of supplying all revenues necessary for the support of the Government, including liberal estimates for internal improvements. Political parties may differ on the degree, the amount, but in no other sense will there ever be a division of public sentiment in this country. The tendency of all this is to cause the citizen to lose sight of geographical lines and assume a closer and more direct relation to the General Government. The tendency in this direction cannot be mistaken. National legislation is now extended to a score of subjects, concerning which local regulation was deemed adequate before. We see it also in the increasing demands on the central authority for aid in all great enterprises, some of them of doubtful public utility, requiring the expenditure of large sums of money and the application of superior engineering skill.

For weal or for woe, ultimately, it is unquestionably the drift of the period, and underlying it all is the progressive spirit of the American people. I do not feel called upon to speculate as to the final result; that is not necessary in this connection. I find a well defined and well recognized policy in practice, and I deal with it as I find it. It is not to be condemned if its results are mutually beneficial to all of the people in every section of our common country. A failure to observe the essential element of reciprocity can alone bring it into popular disfavor. It is against this abuse of the system that I would warn gentlemen on both sides of the House, for both sides are equally committed to the doctrine, as witness the vote on the twenty million river and harbor bill.

I have already called attention to your neglect of the more remote sections of the West, but I cannot too strongly emphasize this just cause of complaint. Leaving out of the count the "Jumbo" river and harbor bill, as essential to commerce, which it is not in many of its features, we cannot appreciate the justice of an annual appropriation of a half million of dollars for the maintenance of the Signal Service Bureau, charged with the responsible duty of predicting rain-storms in the humid region east of the Mississippi, while we of the arid half of this Union are denied an insignificant sum with which to experiment for artesian water.

I have no hostility, Mr. Speaker, to the Signal Service, and only allude to it for purposes of illustration. We in the West desire no warning of the approaching rain-storm. We hail its coming with delight.

In like manner I might draw the line on the National Board of Health. It is important to you, but we have no use for it in the high altitudes of the interior of the continent. Epidemics and contagious diseases are practically unknown in the mountains of the West.

Our great need, Mr. Speaker, is more water. We ask to know where in the depths of the earth run the subterranean streams that may be brought to the surface for the fertilization of our lands. We desire to know where artesian waters may be found. We want the subject placed in the hands of scientific men who are competent to determine the geological structure and to point out the strata and locality best suited to artesian borings. We also desire a few practical experiments by the Government. A quarter of a million annually should be expended in these tests for a number of years. Our people will not buy your desert lands and incur the risk of obtaining water at an additional outlay of thousands of dollars. The Government is the interested party, and it must make the first experiments.

The ordinary Western settler cannot afford it if he would. The Government need not necessarily lose one dollar in these experiments. The improvement of its own property cannot fail in the end to inure to the benefit of the Treasury. One successful artesian well with the land adjacent will sell for enough to sink a dozen. The small sums hitherto appropriated have not had a fair chance. They were placed in incompetent hands, and expended at random without regard to the geological structure. The Geological Survey is the proper medium through which to make these all-important tests. I have no fear of the result when intrusted to competent hands. Every mountainous country is an artesian country. Pressure being essential to success, there must in the very nature of things be an elevated source for the underground streams. The springs that burst from the mountains are but artesian wells in miniature. They illustrate the principle better than it can be demonstrated in any other way.

Nevada is an elevated plateau 4,000 feet above the level of the sea, traversed by numerous chains of mountains, rising from 1,000 to 5,000 feet above the State level. The intervening valleys are the localities where artesian experiments are desirable. There can be no doubt of success in these valleys. The only question is one of depth. That is what we want demonstrated. The soil is known to be fruitful with the application of the necessary water; and let me say that crops raised by means of irrigation are the most reliable in the world. They are not dependent upon the seasons. We have within our borders more than 10,000,000 acres of land capable of cultivation with water to irrigate it. Our State is but a fair type of all the arid region which I have so hurriedly described. The capacity of that vast region to sustain the teeming millions who are destined to find homes in this country in the not remote future is a question that may well claim attention as one of the first and highest importance.

Mr. Speaker, the world is being peopled at a rate never approximated before. Nations are no longer decimated by war or pestilence. The improved appliances of modern warfare coupled with the advance of science in staying pestilential and contagious diseases combine to produce this result. Great issues are determined by a few decisive battles with the minimum of loss in human life. Our shores are attracting the thrifty emigrant from all lands. The arid region of the West must be prepared for his habitation. The mountainous portions of that region must also furnish your beef supply in the future. Grass-fed beef means cheap beef. Millions of acres there are never grazed for the lack of contiguous water.

A bullock fed on the nutritious bunch-grass of the mountains weighs 1,200 pounds, as against 800 pounds for the same character of animal grazed on the plains of Kansas or Texas; and both of these States, with the advent of railroads, are being rapidly brought under cultivation. Each gained four additional Representatives by the recent Congressional apportionment. The best beef in the world is produced on the mountains of our Western States and Territories. From Nevada we supply the San Francisco market and ship largely to Chicago and other eastern cities. To promote pasturage alone artesian wells are imperatively demanded. It is not deemed necessary to go into a discussion of the practicability of these wells. Their great utility has been known throughout the world for six thousand years.

In my State mining is the leading though not the only interest. Agriculture and stock-raising are also important industries. The latter may be greatly increased with the reclamation of our arid lands. We have enriched you to the extent of \$300,000,000 in bullion. May be we bought our supplies from San Francisco, but San Francisco bought from the East, and in the end you got the lion's share. One-half of our entire product has been in gold; all of our bullion runs in about that ratio. Nevada will continue to produce for a great many years about \$25,000,000 in equal parts, but we are coming to realize this fact: every ton of ore we extract impoverishes the State by just that much; ore does not reproduce. In this regard we differ from the wheat and corn producing States of the old Northwest.

Their wealth is permanent, while ours is transient, in a comparative sense. We realize, sir, that our State must be gradually transformed and greater attention and prominence given to the more permanent industries and pursuits attaching to a full development of our agricultural and pasturage resources. You can help us and at the same time help yourselves and the Government by creating a demand for the unoccupied public domain in our State. You can at least encourage our production of the precious metals by withholding hostile legislation; it is in your power to give the silver mines of Nevada an even chance with the iron mines of Pennsylvania. You can provide for the prompt payment of the just claims of our State and citizens. You can direct such public improvements as are not denied to other States; you can "regulate commerce" on the transportation lines of the country, thereby giving us cheaper supplies; and, finally, you can authorize the ceding back by California of four prosperous counties that were taken from us by the running of the line between our State and that. Morally and geographically we are entitled to all territory lying east of the summit of the Sierra Nevada Mountains. I merely allude now to these several measures of great local importance. I shall have occasion to discuss them more in detail as they come up for consideration.

And now, Mr. Speaker, with such national aid and encouragement as we are entitled to and have a right to expect the future of Nevada is not problematical. Water is to-day our greatest want. Give us the artesian experiments that I have demanded, and I can discern in the not distant future a thousand smiling valleys in our State, dotted over with emerald groves and fields of golden grain, homes of a contented people, with a still broader expanse devoted to grazing herds and prosperous stock-farms.

Land-Grant Railroads.

"Great estates destroy the spirit of patriotism in those who have everything and those who have nothing."—ST. PIERRE.

SPEECH

OF

HON. WILLIAM S. HOLMAN,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 7, 1882.

The House, in Committee of the Whole, having under consideration the sundry civil appropriation bill—

Mr. HOLMAN said:

Mr. CHAIRMAN: This bill of "odds and ends," which can find no appropriate place in any of the regular bills providing for the De-

partments of Government, appropriates the unprecedented sum of \$23,680,865.06 which might be reduced to \$7,000,000 without impairing the efficiency of any Department. But there is a single item in the bill involving a comparatively small expenditure to which I wish to invite attention. That item reads as follows:

For surveying the public lands, \$400,000.

The sum heretofore appropriated annually for that purpose has been \$300,000. This increase might excite attention, but upon examination I find that a system has recently grown up under color of law enormously increasing the fund for the survey of the public land under this system. Persons desiring the survey of a township of public land deposit the money to cover the cost of the survey in any Government depository and receive a certificate for the same, and these certificates are assignable and are received in the land offices as cash in payment for public lands, and the funds deposited are applied to the survey of public lands. I learn from the last report of the Commissioner of the General Land Office that during the fiscal year 1881 the enormous sum of \$1,804,166.47 was deposited under this system, which, added to the \$300,000 regularly appropriated, made the sum of \$2,104,166.47 available for the survey of the public lands.

Thus a double fraud is perpetrated on the Government; the one in opening up facilities for the excessive profits incident to the Government surveys, and the other furnishing opportunities for capitalists to monopolize at a nominal price large bodies of the most valuable of the public lands.

Now, sir, the Commissioner has called attention to this subject, and in his last report sets forth an order issued by him seeking to restrict this evil, the first paragraph of which is in these words:

To surveyors-general:

In order to prevent as far as possible the perpetration of frauds and fraudulent surveys, which have already assumed alarming proportions under the system of deposits by individuals, it is hereby ordered.

And the Commissioner proceeds to set forth rules seeking to counteract as far "as possible" these frauds, and the Commissioner recommends the repeal of the law under which these frauds are sheltered. These facts are known, I presume, by all the members of the House, and are especially within the knowledge of the Committee on Appropriations.

Mr. HISCOCK. I desire to ask the gentleman from Indiana whether it will interrupt him if I explain the provisions of the bill in regard to this matter.

Mr. HOLMAN. I intend to come to that in a moment, and I shall then be very glad to hear the explanation. After being thus informed of the existing evil by the Commissioner of the General Land Office, the Committee on Appropriations, after appropriating \$400,000 by this bill for the survey of the public lands, instead of repealing the law which authorizes these frauds, add the following provision:

That no certificate issued for a deposit of money for the survey of lands under section 2403 of the Revised Statutes and the act approved March 3, 1879, amendatory thereof, shall be received in payment for lands except at the land office in which the lands surveyed for which the deposit was made are subject to entry, and not elsewhere; but this section shall not be held to impair or affect in any manner deposits and contracts made under the provisions of said act prior to the passage of this act.

I concede that last clause is right. If by the provisions incorporated in section 2403 of the Revised Statutes, and the amendatory act, making these certificates assignable, parties have become the holders of these certificates, rendering it still more convenient to reach your public domain, why of course the Government is bound by it and must submit to that extent to the wrong done. But I protest against the other proposition, and still more I protest against what is omitted—a repeal of the law authorizing the fraud.

What, then, is the effect of the provision? It is simply this, that the certificates of deposit shall only be received in payment for land in the land district in which the survey was made for which the money was deposited. Does that reach the evil? Does that put an end to or even limit those frauds? Not in the least. Some of these land districts exceed the territory of a great State, embracing many millions of acres, and all that the provision of the committee does is to limit the operations of these gentlemen who are surveying and monopolizing the most choice of your public lands to the district in which the deposit is made. I hardly think they would wish a larger field.

I would now be very glad to hear an explanation from my friend from New York [Mr. HISCOCK] why this extraordinary state of things is permitted; why this legislation which authorizes the issue of these certificates is not repealed by this bill in conformity with the recommendations of the Commissioner of the General Land Office.

Mr. HISCOCK. The explanation of the provision in the bill is this—

The CHAIRMAN. Does the gentleman from Indiana yield?

Mr. HOLMAN. For an explanation.

Mr. HISCOCK. It is not claimed that there has been any abuse in this deposit system until the certificates were made assignable and receivable for the amount carried upon their face in payment for public lands at any point or at any place. I do not understand that there is anything in the communication to which the gentleman refers that claims that there has been any fraud or irregularity in this matter, or that the system has worked otherwise than well up to the point when these certificates were made assignable, so that the

men making the deposits of money were not compelled to take the land when it was once surveyed, but were given the option of selling the certificates and assigning them to other people to be located where they pleased. These certificates were made assignable in 1881, I think.

Mr. HOLMAN. It was in 1879.

Mr. HISCOCK. They were made assignable in 1879. It is claimed that since then the abuse has grown up of depositing money for which certificates were issued, for the sole purpose of furnishing business to the surveyors, and that therein consists the abuse. After full consultation with the Land Office we have repealed the assignability of these certificates.

Mr. HOLMAN. Whereabouts is that?

Mr. HISCOCK. To the extent that they must be located by whoever holds them in the district of the land office in which the deposit was made.

Mr. ATKINS. And not in the township, as heretofore.

Mr. HISCOCK. They were originally required to be located in the township.

Mr. HOLMAN. I think I understand the gentleman's position, and he will excuse me if I do not permit him to consume any more of my time. This explanation is entirely unsatisfactory, and will be found so by any gentleman who will examine the facts before the committee and the provisions of this bill; the clause I have read is the entire provision. The use of these certificates is not limited to the persons to whom they were issued. They are not limited at all, except that they shall be used in the land district where the deposit is made. It leaves the evil just exactly as it was. The statement of the Commissioner, in which he refers to the assignability of these certificates, is this:

Applications for surveys are fraudulently prepared by or through the instigation and management of deputy surveyors, who, for the purpose of securing the contract for making the survey, either themselves or through friends advance the money for the deposit, thereafter sell and assign the certificates, and thus reimburse themselves and secure their profit from the surveying contracts.

And yet gentlemen must see that even if these certificates were not assignable the same evil, only slightly modified, would continue. What is most marked is that the Committee on Appropriations, and apparently with the concurrence of the Committee on Public Lands, permit this monstrous wrong to go on of the survey of these lands beyond the public wants for the purpose of speculation, for that is what it means, just that, nothing less.

I concede that the Commissioner of the Land Office complains of these frauds on account of the profitable surveying contracts thus obtained. That is not the main evil of which I complain. What I am condemning especially is—

Mr. ATKINS. Will the gentleman allow me one word?

Mr. HOLMAN. Let me finish my sentence. What I am condemning is that you allow the survey of these lands far beyond the demands of settlement; not so much that it enables the contractors who make the surveys to realize unreasonable profits, but for the other reason that is of much greater moment to the people of this country, that it enables men with capital to monopolize your public lands, and speculate on the natural rights of your laboring people.

Mr. HASKELL. How can they do that?

Mr. HOLMAN. By buying the land at a nominal price. And that applies no less in the States where the pre-emption law must be resorted to than in the States where the lands are subject to public sale and private entry. I am prepared to show that even under the pre-emption laws men of capital speculate in your public lands. I now yield for a moment to the gentleman from Tennessee.

Mr. ATKINS. I only wanted to state that I thought the criticism of the gentleman on the Committee on Appropriations was rather unjust, because if he had been a member of Congress for the last four years preceding this he would have known that efforts were made to cut down this very appropriation, and it had to be done in the face of the estimates, of the wishes of the Administration as expressed through its estimates, and the opposition of the Western members of Congress on this floor.

Mr. HOLMAN. Certainly. We saw that in the Forty-fourth Congress. The bill as it passed the House proposed such a reduction in the compensation for surveying the public lands as to remove all motive for fraud. The amendment of the Senate could not be entirely overcome; and the sum of \$300,000 had to be appropriated. The pressure then was almost as great as it is now to reach the public lands and exhaust them; they are now and have been for years a rich field for dishonest speculation. But, Mr. Chairman, the evil of which I complain is only a part of a general system. I wish in a brief way to consider the subject more broadly. The act which passed Congress on the 20th of May, 1862, known as the "homestead law" was not only one of the wisest but one of the most humane laws ever enacted—I had the honor myself to vote for it and I feel an honorable pride in that vote. It was the first important law of civil government enacted by the great party which from that day to this has controlled this Government. It was the hope of the friends of that great measure that at a very early day all the public lands of the United States adapted to agriculture would be placed under its provisions, thus securing for all time the public domain for the benefit of the actual settler, the nation holding the lands only as a trustee for its landless people.

The Republican party in its early vigor pointed to this law with commendable pride not only as the fulfillment of a promise made to the people but as the evidence of the elevated statesmanship of its leaders. Andrew Johnson and other eminent representatives of Democratic principles had made a brave fight for the homestead law and failed. The Republican party had carried it through as its first measure of civil policy.

Thirty years ago in the first gathering of its elements the Republican party at Pittsburgh adopted this resolution:

Resolved, That the public lands of the United States belong to the people, and should not be sold to individuals, nor granted to corporations, but should be held as a sacred trust for the benefit of the people, and should be granted in limited quantities, free of cost, to landless settlers.

It was greatly to the honor of that party and the eminent statesmen who organized its forces that ten years after the adoption of that resolution the party fulfilled its early promise by the enactment of the homestead law. It was an honorable beginning, but that great party twenty years ago, devoting for the coming ages the grand public domain of that day for homes for the landless and prosperous and happy firesides for all men who would assert the rights of labor, and that party of to-day, turning that bountiful gift of nature to mankind over to the grasping millionaire and the plundering spoilsman and using the powers of Government to drive off the laboring-man from the fields enriched by his labor and on which he was invited to enter by that very homestead law for the benefit of incorporated power, is the most striking and humiliating contrast known to the history of free government.

The facts which I shall present will show how tamely I have presented the case. The great parties which had controlled the Government for three-quarters of a century had husbanded the public lands with jealous solicitude; their policy at times seemed almost miserly. They did not underestimate the value of this great inheritance; they saw in the fertile and boundless fields of the West the strong bulwark of the republican institutions they were cherishing; they saw in those fields the safety of labor against the oppression of capitalized power; they felt and knew that while that refuge remained, while the strong arm and the brave heart of labor was sure of a freehold, a home, and a fireside against all the accidents of fortune the Republic was secure.

The monarchies which had held possession in North America, the English, the French, and the Spaniard, had granted to favorites large estates in land. And why not? Such is the instinct of monarchy. Our fathers boarded the public lands to secure homes for the people. They did not enact a homestead law, for the public Treasury during a long period required the price, little more than nominal, charged for the public lands. It was no hardship, for there were no overgrown estates; and hence poverty was almost unknown. Under this policy the great States stretching westward from the Alleghenies to the Mississippi and still onward were settled; the general equality in wealth was maintained; no princely estates; no cry of labor for bread. Up to the time the Republican party came into power not an acre of land had been granted by Congress to a corporation; but the grants made by Congress to States for internal improvements and applied by the States to making of roads, canals, and railroads amount in the aggregate to 31,600,846 acres. This includes all of the grants made by Congress from the adoption of the Federal Constitution on the 17th day of September, 1787, to the 4th day of March, 1861, when the party now controlling public affairs came into power, covering a period of seventy-four years.

And here I present, sir, a table of the grants of public lands made by Congress since the Republican party came into power on the 4th day of March, 1861, covering a period of twenty-one years—not grants made to States for public purposes and subject to State control and State taxation, but made to corporations for the gain and profit of corporations which are even now almost, if not entirely, above either State or Federal control:

No. 1.—Statement exhibiting land concessions by acts of Congress to corporations for railroad, canal, and military wagon-road purposes from March 4, 1861, to June 30, 1874.

RECAPITULATION.

Grants to railroad corporations	192,081,155.52
Grants for roads and canals	3,112,542.00
Total	195,193,697.52

Thus, while the old parties, Federalist, Democrat, and Whig, had carefully guarded the public land through a period of seventy-four years against the countless schemes of proposed and pretended development and improvement, through which the designing and the crafty sought to reach them, and through that long period granted 31,600,846 acres to States for internal improvements, the Republican party in a period of fourteen years gave to railroad corporations 192,081,155.52 acres. All of these grants, aggregating 192,081,155.52 acres, were made between the 4th day of March, 1861, and the 4th day of March, 1875, a period of fourteen years, for on the 4th day of March, 1875, the Democratic party came into the control of this House, and since then no grant has been made, renewed, or enlarged. And who can estimate the fatal injury inflicted by this system on the integrity of the public service? Each grant has its own peculiar history of national humiliation.

The exhaustion of the public land is not the only evil of this system of land grants. In the many struggles to renew, enlarge, and extend the grants, spectacles were presented on this floor which cannot be recalled without a sense of national humiliation and dishonor when great stockholders of the corporations holding these grants, members of this House, unblushingly attempted to vote in their own interest, and were arraigned before the bar of the House for the discreditable attempt. When the most fertile regions of the

public domain had been reached and appropriated by these grants, and not till then, the minority of this House were able to check this corrupting policy. The time for the completion of these land-grant railroads has expired. The last grant, according to various laws creating the grants, expired on the 2d day of May, 1882. The time for the completion of the Northern Pacific Railroad, with its enormous grant of 48,215,040 acres, expired on the 4th day of July, 1879.

In all of these grants, except to the Northern Pacific, it is in substance provided that the corporations should complete a specified portion of their respective roads each year, receiving the lands accruing upon the completion of each section of twenty miles, and should complete their respective roads within a specified period, generally ten years, and upon failing to do so the lands remaining should "revert to the United States." In some of these acts the language is still more specific and declares that upon such failure the act shall be "null and void," and the remaining lands "shall revert to the United States." There is not the least ambiguity in the conditions to these grants, by which the corporation is entitled to a given number of sections of land on the completion of each section of twenty miles, and if there is a failure to complete the road within the period specified the remaining land "shall revert to the United States."

In the grants to the Northern Pacific Railroad Company the terms are different. The eighth section of the act is specific and unequivocal. It is as follows:

SEC. 8. *And be it further enacted*, That each and every grant, right, and privilege herein are so made and given to, and accepted by, said Northern Pacific Railroad Company, upon and subject to the following conditions, namely: that the said company shall commence the work on said road within two years from the approval of this act by the President, and shall complete not less than fifty miles per year after the second year, and shall construct, equip, furnish, and complete the whole road by the 4th day of July, A. D. 1876.

There is no ambiguity in this language. Each and every grant, right, and privilege herein is "given to, accepted by," said company on the condition that the work shall be commenced within two years after the approval of the act, (July 12, 1864,) not less than fifty miles a year shall be completed after the second year, and the whole road shall be constructed, equipped, furnished, and completed by the 4th day of July, 1876. Then follows the most unmeaning jumble of words ever hid in the verbiage of an act of Congress, written as if the crafty lawyer who drew it wished to create an ambiguity on which a corporation might set up some pretense of a right not granted by the law. Here is this remarkable section:

SEC. 9. *And be it further enacted*, That the United States make the several conditioned grants herein, and that the said Northern Pacific Railroad Company accept the same, upon the further condition that if the said company make any breach of the conditions hereof, and allow the same to continue for upward of one year, then, in such case, at any time hereafter, the United States, by its Congress, may do any and all acts and things which may be needful and necessary to insure a speedy completion of the said road.

If this corporation gains anything by this section it will only be when it is sufficiently powerful to order the interpretation of a law against the plainest dictates of common sense. It accepts the grant on the condition that its "whole road" shall be completed by the 4th day of July, 1876, and if it breaks its contract then the United States may do what is necessary "to insure a speedy completion of said road." Well, suppose this corporation forfeited its land grant by failing to complete its road by the 4th day of July, 1879, for the time was extended by the joint resolution of May 7, 1866, to that date, without any other change in the conditions, and Congress declared, as it rightfully might and should, the remaining lands forfeited to the United States, certainly the Government might complete the road if it thought proper and had the constitutional power, or might regrant the lands for that purpose; but does this ninth section confer a power or impose a duty on the United States? Does it mean that Congress cannot declare the forfeiture under the eighth section without providing for the completion of the road?

No, sir; it means simply that the United States might do exactly what it might have done if this ninth section had not been a part of the law. This corporation will have to be stronger than Congress or the Federal judiciary before it will be able to obtain a decision that the United States cannot declare the forfeiture under the eighth section until they assume the obligation to complete the road under the ninth section. Perhaps this corporation will have the effrontery to claim that under the ninth section if it forfeits the grant, then the United States are compelled to complete the road for its benefit. And yet this extraordinary claim would not be more startling than the claim that if the corporation forfeited its rights then the United States were bound to provide for the completion of the road for the benefit of the United States. But happily the last section of the act leaves the whole subject under the control of Congress. It provides:

SEC. 20. *And be it further enacted*, That the better to accomplish the object of this act, namely, to promote the public interest and welfare by the construction of said railroad and telegraph line and keeping the same in working order, and to secure to the Government at all times (but particularly in time of war) the use and benefits of the same for postal, military, and other purposes, Congress may at any time, having due regard for the rights of said Northern Pacific Railroad Company, add to, alter, amend, or repeal this act.

The stump speech in favor of this imperial grant embodied in this last section, craftily framed as it is, will deceive no one; it has but

one meaning, and that is "that Congress may at any time, having due regard for the rights of said Northern Pacific Railroad Company, add to, alter, amend, or repeal this act." In view of the forfeiture which occurred of this grant on the 4th day of July, 1879, what rights have that corporation which the United States are bound either in law or equity to regard?

It might have been fairly presumed that, as those corporations were entitled to patents for the land as each successive section of the road was completed, the land remaining when the period for

the final completion of each road expired would at once become a part of the public domain; but the Supreme Court holds otherwise, that the law vested in the corporation the right to the land, that the condition of forfeiture for failing to complete the road within the time specified was a "condition subsequent," and hence an act of Congress was necessary to declare the forfeiture and restore the land to the public domain. I present here a statement of the several grants which have been forfeited. The last of these grants, that to the Texas Pacific Railroad Company, expired on the 2d day of May, 1882:

No. 2.—Land grants which have been forfeited by the failure of the corporations to complete their roads in conformity with law.

Name of railroad.	States in which located.	Grant by act approved—	Grant to—	Alternate sections within—	With indemnity within—	Extended by act approved—	Estimated quantity of lands granted.

	Various	July 27, 1866	do	Various			
	do	Mar. 3, 1871	do	do			
	do	June 22, 1874	do	do			
	do	July 2, 1864	do	do			

Total number of acres embraced in these grants..... 128,472,161.13
Length in miles of railroads as definitely located..... 12,080.00
Number of miles of railroad completed before expiration of grants..... 3,151.28

It will be seen that this statement embraces many of the earlier grants and three of the great grants made within the fourteen years, many of the older grants having been extended and greatly enlarged within the last eighteen years. These twenty-three grants embrace 128,472,161.13 acres. The aggregate length of the railroads for which these grants were made is 12,080 miles, and the number of miles completed when the grants expired was 3,151, so that a fraction over one-fourth of the roads was completed and the companies were entitled to only their proportion of the 128,472,161.13 acres when the forfeitures occurred, and in good faith and common honesty the

rest of this enormous body of land reverted to the United States. Not a mile of some of these railroads has been constructed up to this day. The following table shows the number of miles which had been constructed by each of the great corporations above named when their grants expired, and the time of their expiration, including the Southern Pacific of California, which is not embraced in the foregoing table, but is embraced in the report of the Commissioner of the General Land Office made to the House on the 28th day of March, 1882, (House Executive Document No. 144, first session, Forty-seventh Congress:)

No. 3.—Table of certain expired grants, &c.

Name of railroad.	No. of acres in grant.	Length of road, in miles.	When grant expired.	Miles completed when grant expired.
Atlantic and Pacific	42,000,000	2,426	July 4, 1878	125
Texas Pacific	18,000,000	1,483	May 2, 1882	181
Northern Pacific	48,215,040	2,270	July 4, 1879	531
Southern Pacific of California	5,511,264	522	July 4, 1878	125
Total	113,726,304	6,701		962

Thus it will be seen that four of these corporations, which received grants of the public lands amounting in the aggregate to 113,726,304 acres, a territory five times as large as the State of Indiana and 10,000,000 acres more, for the construction of 6,701 miles of railroad, had completed only 962 miles of railroad when the grants expired, leaving over 96,000,000 acres of the grants now rightfully belonging to the public domain. But since the decision of the Supreme Court that these

grants vest from the beginning in the corporations, and on the forfeiture of the grant an act of Congress is necessary to restore these lands to the public domain, the Departments of the Government have treated those grants as still existing, notwithstanding the forfeiture; and I present a table, condensed from the report of the Secretary of the Interior for 1880-'81, volume 2, page 318, which presents in detail the condition of a large number of these grants:

No. 4.—Table showing the grants to certain corporations, lands sold, &c.

Name of railroad company.	Date of original land-grant act.	Date of ancillary land-grant act.	Number of miles covered by grants.	Estimated number of acres granted.	Total sales of land.		Estimated quantity of acres of granted land remaining unsold.

This table presents matter well worthy of consideration. While the Government with seeming eagerness is getting rid of what remains of the public land, and during the last fiscal year disposed of 10,893,397 acres and received in cash \$3,534,550, yet these corporations with their immense land grants, the larger portion of which in quantity were made in 1862-'64-'66—and although the Union Pacific and its great branches were completed more than thirteen years ago and thus became the absolute owner of its grant—have only sold off 14,310,204 acres and realized therefrom \$68,995,479.31, and according to this table they still hold in reserve 164,512,334 acres of their grants.

Yes, sir, those corporations are patiently waiting until the United States shall exhaust all that remains of the public lands adapted to agriculture, for then their monopoly is complete and every laboring and landless man in the United States is at their mercy. But it will be seen that even the larger portion of the lands sold are sold to the members of these corporations at the price of a fraction under \$5 per acre, still to be held for speculation. It is therefore not at all surprising that an irresistible pressure is brought to bear upon Congress to exhaust the public lands, that 21,788,011 acres should have been surveyed last year (a territory larger than the State of Indiana) and brought within the reach of monopolizing speculators. The pressure of these corporations is felt by every department of the Government, and the extent of their hold upon the public lands cannot be learned with certainty from the public records.

Whoever, sir, shall carefully examine the foregoing tables taken from the official records will be startled by the discrepancies. In table No. 2 the grant to the Atlantic and Pacific is stated at 42,000,000; in table No. 4 at 49,244,803. In the report of the Commissioner of the General Land Office before mentioned, of March 28, 1882, the grant to the Southern Pacific of California is estimated at 5,511,264; no such grant appears in table No. 2. In table No. 4, the grant to the Northern Pacific is put down at 42,000,000 and in table No. 2 at 47,000,000, and many others equally startling. I suppose that in such

enormous grants a few million acres more or less is considered a matter of no moment. Some of these statements seem to come from the Commissioner of the General Land Office and some from the Auditor of Railroad Accounts. The estimates are vague and will be still more so in the future, as will appear, but the uncertainty will not reduce the grants.

There is no branch of the public service so poorly understood as those corporate grants; there is no field in which corruption can riot so secure, and no officers of the Government so beset by temptations as those connected with these grants. Contests are constantly arising between these corporations and the settlers on the public lands, but when in these contests, whether before the courts or the Departments, and I may add before Congress, have these corporations failed?

By disingenuous provisions in the grants and the "art of definition" these corporations are enabled to select their "indemnity land" over a vast region of country, the Northern Pacific in places to the extent of full one hundred miles in width. These "indemnity lands" are withdrawn from the public domain at the same time the lands within the limits of the grant are withdrawn, and settlers over a vast region of country enter upon their homesteads at their peril. J. W. Le Barnes, one of the law clerks of the General Land Office, testified before the Senate Committee on Public Lands recently touching the rights of settlers in answer to questions as follows. Senator BLAIR submitted the questions:

Question. These are cases where men who have made their improvements in good faith have been ousted from their property by the railroad companies without compensation?

Answer. Yes, sir; or by the Land Department for the benefit of the railroad companies.

Q. Has it been the custom of the railroad company, or those who obtain these improved lands by virtue of this construction of the law making grants to them, to compensate the ousted parties for their improvements?

A. I have never heard that railroad companies compensated settlers for their improvements on lands decided by the Department to belong to the railroads. There have been many classes of cases in which the railroad companies have obtained land in this way.

This witness further testified as follows:

The decisions have been irregular. Sometimes they were one way and sometimes the other, but they have very generally been against the settler.

Q. What other instance of hardships to settlers do you recall?

A. Referring to the general principle that homestead entries segregate the land so that it cannot be taken by any other form of disposal, I may mention a decision by the Secretary in 1879, known as the Kniskern case, (6 Copp., 50.) which is one of the classes of cases in which the principle stated is not applied in contests between settlers and railroad grants. In this case a soldier's homestead entry had been made on a tract of land in Minnesota, under the act of 1864, (R. S., sec. 2294,) which permitted soldiers in actual service to make their affidavits of intention to claim the land before a commanding officer. Thousands of soldiers availed themselves of this privilege, hoping perhaps to return from the field and have a farm to go to, or in any event to provide a home for family or parents. They did not always return. Their families could not always move out on the wild land. So that in most instances the required residence and improvement was wanting, and the entries were canceled in due course of time.

While existing on the records, however, such entries operated to reserve the land under the general rules of law applicable to all homestead entries. The public knew no difference between these soldiers' homestead entries and homestead entries of any other class. Neither did the Department until 1879. Then it was held, in the Kniskern decision, that the soldier's entry in that particular case was *prima facie* invalid in its inception, and therefore that it did not operate to except the land from a railroad grant. All the lands that had been covered by these entries had been re-entered by other persons after the homestead entry had been canceled. The soldier's entry was a homestead claim, and homestead claims as well as rights were excepted from the grants. For fifteen years settlers had been educated by practice and precedent to believe that second entries made after the cancellation of the first would be respected. They knew that neither themselves nor others could legally go on the land until the former entry had been adjudged invalid. They did not know that railroad companies had rights that citizens did not possess.

The final renewal by Congress of the grant for the Saint Paul and Pacific extension lines (now the Western and the Saint Paul, Minneapolis, and Manitoba Railroads) (18 Stat., 203) was made upon the express condition that the rights of actual settlers and their grantees, who, on June 22, 1874, were residing on the formerly granted lands, or who otherwise had legal rights in any of such lands, should "be saved and secured to such settlers, or such other persons, in all respects the same as if said lands had never been granted to aid in the construction of the said lines of railroad." This grant had twice before been forfeited and renewed. A change of route had been authorized, and the original grant had been increased from six to ten sections per mile. The condition affixed to the last renewal was followed by another condition that any company taking the benefit of the act should, before acquiring any rights under it, file an acceptance, under seal, of the condition above recited. This acceptance was never filed. The Department thereupon held the act inoperative, and rejected the claims of settlers who had settled in good faith on the formerly granted lands prior to June 22, 1874.

But it does not appear to have regarded the rights of the railroad companies to have been in any wise impaired thereby, as 136,000 acres of public land have been certified or patented to one of these companies, and 500,000 acres to the other, since the inoperative act was passed. The Department in terms declared the act inoperative for any purpose, but practically the act appears to have been inoperative only as to the settlers whose rights were protected by it while remaining in full force and effect as to the corporations that acquired no right under it. The further claims of these companies to an additional amount of land, aggregating 1,800,000 acres beyond the amount already received, also continues to be recognized as valid on the ground that the effect of forfeiture by legislative resumption and control of granted property, and a new disposal of it upon special conditions, can be avoided by the failure of the grantee to accept the conditions upon which the renewal of his forfeited right depends.

Leandro Serrano with his family settled on land in California in 1835, before the acquisition of the territory by the United States. The tract was a part of a rancho, which, after the Mexican cession, was claimed by Serrano under a former grant. The grant failed. Serrano died. His widow continued to reside on the land. The township was not surveyed until 1874. In 1877 Mrs. Serrano applied to enter the land under the pre-emption law. In 1879 (6 Copp., 93) her application was rejected, and the land was awarded to the Southern Pacific Railroad Company, the line of whose road had been run in 1875 past the land occupied by her. At that time Mrs. Serrano had lived on the land for forty years. The grant to the company could legally take no land not "free from pre-emption or other claims or rights." Such were the terms of the granting act. But it was held that as Mrs. Serrano had not filed the formal notice of her claim under the pre-emption laws within three months after the survey of the township she had forfeited her claim.

It frequently occurs that a settler, not a native-born citizen of the United States, has neglected to declare his intention to become a citizen before applying to make entry under the settlement laws. This innocently happens in many instances from a reliance on a father's supposed naturalization, which cannot afterward be proven. But from whatever cause the neglect arises, it has not until recently been held that the absence of proof of declaration at date of filing a pre-emption or homestead claim invalidated the claim if citizenship was acquired before the entry was perfected. Now it does; and the effect of the more recent ruling, which was made in a railroad case, has been to destroy an equitable construction of the law that had been recognized for a long term of years, in the practice of the Department, as founded on judicial precedents.

The doctrine that a railroad grant is an adverse claim to lands excepted from the grant is illustrated in a still more recent case of the same character, where no grant had ever taken effect. Samuel H. Bratton settled on land in California in 1870. He continued so to reside, and placed valuable improvements on the land. He was qualified to make an entry under the settlement laws, and he complied with all the requirements in respect to residence, improvement, and cultivation. The land was unsurveyed. In 1871, after Bratton's settlement was established, the grant to the Pacific and Texas Railroad Company was made. A map showing a preliminary line, as it is called, was soon after filed in the General Land Office, and a withdrawal of lands for a distance of thirty miles on each side of this inchoate line was ordered for the benefit of the grant.

Upon the survey of the township embracing Bratton's settlement, which was in December, 1880, his land was found to be in an odd-numbered section within the limits of the withdrawal.

Immediately upon the filing of the township plat in the local land office Bratton appeared and made homestead entry of the land. A few months later he made final proof and received final certificate. The case was recently reached in the General Land Office, when Mr. Bratton's entry was declared illegal. It was admitted that his proofs were satisfactory, and it was held that if he had filed a pre-emption declaratory statement before he made the homestead entry he might the next moment have changed that filing to a homestead entry and thus have saved his land. But failure to do this was fatal. The land belonged to the railroad company. And this decision was rendered in the face of the following facts:

First. A controlling decision that the preliminary filing of the pre-emption declaratory statement was unnecessary.

Second. That Bratton's settlement antedated both the grant and the withdrawal.

Third. That the grant to the Texas and Pacific Railroad Company expressly excepted lands that were "occupied" at date of definite location.

Fourth. That there had never been any definite location of the line of this road.

Fifth. That no road had ever been constructed.

Sixth. That the time within which the road might have been legally located and constructed had expired, and there had been no renewal of the grant by Congress.

Q. Can you give any idea of the extent of the operation of this thing upon the settlers?

A. From April, 1879, to August, 1881, or a period of two years and a half, I suppose there must have been at least two or three hundred cases decided in that way, and perhaps very many hundred cases were so decided previous to the decision of the Supreme Court.

Q. These are cases where men who have made their improvements in good faith have been ousted from their property by the railroad companies without compensation?

A. Yes, sir; or by the Land Department for the benefit of the railroad companies.

Q. Has it been the custom of the railroad company, or those who obtain these improved lands by virtue of this construction of the law making grants to them, to compensate the ousted parties for their improvements?

A. I have never heard that railroad companies compensated settlers for their improvements on lands decided by the Department to belong to the railroads. There have been many classes of cases in which the railroad companies have obtained land in this way.

The award of land to railroad companies when no claim has been made by the companies is an incident to the exceptional practice of the office in favor of railroads that does not exist in respect to any other class of grants. In the case of school-land grants, for example, the office acts upon the facts of record and the law applicable thereto in adjudicating settlement claims on the school sections, notifying the State of its decisions, when the State may appeal if it so desires. A contest between the State and settler is never assumed, but must be instituted in fact if the State desires to contest. But in the case of railroad grants settlement claims are treated as contests.

The settler is required to especially notify the railroad company of his application to enter or to make proof. Notice by publication, which in all other cases of settlement proof is notice to the world, is not sufficient notice to a railroad. If the company does not appear, or does not in fact desire to contest, it makes no difference. It is regarded as a contestant in any event, and the strict rules governing contests is applied to the settler, who, I have reason to believe, in very many cases, even where the settlement claim would appear to be irrefutable, is driven by practices of the office and the terms and requirements of official letters, as well as by delays and appeals, into compounding with the railroad by purchasing from the company the land to which he has an apparent right under the law.

The witness testified of land received in excess of grants:

The following are some examples of this character:

The Cedar Rapids and Missouri River Railroad is a completed road under the grants available for its construction. The total length of the road as certified by the governor of the State is 271.6 miles. The grant embraced the public lands within three alternate sections per mile on each side of the road, or, in other words, it comprehended six sections of land or so much of six sections as may have been liable to the grant for each mile of the road.

Leaving out of question all elements which diminished the volume of the grant, it will be seen that 271.6 miles multiplied by six sections per mile gives 1,629.6 sections, which at 640 acres per section makes a total of 1,042,944 acres as the extreme possible area that could physically have been embraced in the grant. The amount of land actually certified or patented under this grant to the present date is 1,141,690.76 acres, or an absolute excess of 108,490.77 acres over and above the greatest possible amount with which the company could be credited under any circumstances. And of this excess 1,197.24 acres were patented during the year ending June 30, 1881.

A superficial estimate shows that the overlapping limits of conflicting roads alone diminish this grant by not less than 25 per cent., and therefore that the excess of lands thus conveyed by the United States in this case over the amount entitled to be received is upward of 300,000 acres. If an accurate adjustment should ever be made I think the actual excess would be found much greater.

The Sioux City and Saint Paul Railroad Company of Iowa is credited with fifty-six and one-sixth miles of constructed road. The grant was for ten sections per mile, or a nominal total of 359,520 acres, without taking into account the exceptions and deductions incident to the grant.

The amount of land actually certified or patented to the State under this grant is 407,910.21 acres, or a known excess over the possibilities of the grant of 48,390.21 acres.

It is estimated that the volume of the grant was diminished not less than 37,000 acres, possibly not less than 100,000 acres, more by reason alone of overlapping grants.

The Saint Paul and Sioux City Railroad Company of Minnesota is credited in the Land Office reports with a total granted area of 1,010,000 acres, reduced by partial estimates for necessary reductions to 850,000 acres. Amount patented or certified, 1,200,358 acres, or a known excess over possible maximum of 190,358 acres, and a known excess over a liberal estimate to the road of 350,358 acres, of which 33,218.91 acres have been patented since 1875.

The total computed area of the grant for the first division of the Saint Paul and Pacific Railroad in Minnesota is 1,248,638.95 acres. Total amount certified or patented, 1,251,046.14 acres, or an excess over all of 2,407.27 acres; 2,597.26 acres were patented in 1880. The legal and actual reductions to which this grant is subject do not appear ever to have been considered.

In the same manner and under similar conditions the Iowa Falls and Sioux City Railroad Company in Iowa is credited with a total nominal area of 1,226,163.15 acres. Amount certified or patented, 1,252,025.41, or an excess over all, not computing reductions, of 25,861.36 acres; 100,929.70 acres have been patented to this company since 1875.

The Winona and Saint Peter Railroad Company is credited with a total nominal area of 1,410,000 acres. Estimated area actually inuring to the grant 710,000 acres. The amount of land certified or patented up to June 30, 1881, on account of this grant was 1,668,007 acres, or an excess over the amount of land included within the geographical limits of the grant of 258,007 acres, and an excess over the estimated amount the road would be likely to receive of 958,007 acres; 2,929.52 acres were patented to this company in 1879. So it appears that in the few cases here given 1,493,513 acres had been patented to these companies in excess of their grants. The witness further testifies as follows touching the withholding of lands for these corporations:

Q. Does anything else occur to you to state in connection with the subject of railroads?

A. In all the classes of cases I have mentioned where the roads have received actually or probably more than they were entitled to receive, as also where the roads have not been constructed or only in part, the lands, remaining out of those originally reserved for the benefit of the grants, are still held in reservation. Settlements are excluded from these lands. Where the rights of prior settlers are

denied by the rulings of the Department, or where applications to enter are made by new settlers, the parties are compelled to treat with the corporations for the possession of their old homes or the acquisitions of new ones, although the legal rights of the corporations under the grants may have long since been satisfied, or have ceased by limitation.

The grant for the Gulf and Ship Island Railroad of Mississippi was made in 1856. It expired by limitation in 1866. There is no known corporation in existence. No road has been built and no lands applied for. But all the public lands of the United States within alternate sections, for a breadth of thirty miles on the line of the originally projected road, and for a total length of one hundred and seventy miles, embracing whatever public lands there may be within a territorial area of 1,600,000 acres, were withdrawn from settlement and entry in 1860, and have ever since been held in reservation.

There are a large number of other roads where lands have been held in reservation for periods ranging from ten to twenty-five years where the rights of the States or of the corporations have been satisfied, or forfeited, or extinguished, or where rights were never acquired under the granting acts.

The existing withdrawals for the Northern Pacific Company cover an area of from eighty to one hundred miles in width, over a line of unconstructed road thirteen hundred miles in length, a large proportion of which has not been definitely located. The original withdrawals for this road were made in 1870, 1871, 1872, and 1873. Later withdrawals have been made on changed lines of location.

The Atlantic and Pacific Railroad, with fourteen hundred miles of unconstructed road has, in addition to its withdrawal of a belt one hundred miles in width through the Territories of New Mexico and Arizona, a withdrawal of sixty miles in width along the line of the Southern Pacific coast in California.

The Southern Pacific Railroad Company has a like withdrawal overlapping the coast withdrawal for the Atlantic and Pacific road. The respective grants are computed as of the same date by departmental construction, and although the lands embraced in one grant were excluded from the other by the terms of the granting act, no difficulty appears to be found in awarding to the Southern Pacific Company the lands embraced in the withdrawal for the Atlantic and Pacific. But an objection is found to the recognition of the rights of settlers on the same lands. Practically the withdrawal for one company is regarded as invalid as against the claim of another company, while it is held in full force and effect as against the settlers.

Lands within the limits of the withdrawals for both the Southern Pacific and Atlantic and Pacific across the State of California, aggregating one hundred and twenty miles in width, where no road has been built, and none is being constructed, are still retained in reservation. The withdrawals for the Southern Pacific were made in 1867 and 1871, and for the Atlantic and Pacific in 1872.

The California and Oregon and California Railroads are not completed. The grant was to be null and void upon failure to complete construction as required by law, and all lands then unpatented were to revert to the United States. The grants have expired, but the withdrawn lands remain in reservation. Original withdrawals from 1867 to 1871.

The grant for the New Orleans, Baton Rouge and Vicksburg Railroad was made in 1871. Expired by limitation in 1876. No road ever constructed under this grant. Line of road not definitely located. Total length of proposed road three hundred miles. Lands withdrawn in 1871-73 on a preliminary line and still retained in reservation.

The Texas and Pacific Railroad grant is similarly situated; no road constructed; line not definitely located; lands withdrawn in 1871 from El Paso, in Texas, to Pacific Ocean, sixty miles in width, and still in reservation. I give the foregoing as examples and not as a complete list.

The railroads that received subsidies in bonds, such as those embraced in the Union and Central Pacific systems, and where the roads are completed and the lands earned by construction have not generally applied for or received the quantity of land to which they are entitled. Much complaint is made on this account. Some years ago Congress passed an act requiring all railroad companies to pay the cost of surveying and conveying before patents should be issued. The complaint is that advantage is taken of this act to let the legal title remain in the United States until the lands are sold and fully paid for, the companies thus avoiding the payment of State and county taxes on all the land to which their right to receive the legal title has been acquired, and by a mortgage sustained by the Supreme Court as in the nature of a disposal they avoid the provisions of the granting act requiring the lands to be sold to settlers after three years from construction at \$1.25 per acre, and at the same time actually sell the lands at the corporation price and receive interest on deferred payments, and in some cases lease the land and receive the rents.

The grant for the Saint Louis and Iron Mountain Railroad of Missouri was made in 1866; expired in 1871. Road not built under the grant, but grant abandoned by company for a different location. Lands still in reservation, and so held since 1870, for 20 miles on each side of the originally proposed line.

The grant for the North Louisiana and Texas Railroad expired in 1866. No road officially reported; 94 miles reported unofficially; 353,211 acres of land certified or patented in advance of construction, or over 300,000 acres more than would have accrued for length of road actually built. Lands withdrawn in 1857 along a line 160 miles in length; 12 miles in width being within granted and 18 miles in width in indemnity limits. Remaining lands still held in reservation.

A withdrawal of lands was made in 1862 for the Leavenworth, Pawnee and Western Railroad Company of Kansas.

A provision in the granting act (12 Stat., p. 493, sec. 12) required an acceptance of the act by the company, under seal, to be filed in the Interior Department. This must have been done before the act could become operative. It was a condition precedent to the taking effect of the act. It was not done. A map of location was also to be filed. An old Territorial map, with pencil lines drawn through it, was deposited before any survey of the line had been made or other act performed to indicate an actual and responsible selection of the line of route. Under this state of facts the withdrawal mentioned was made. Nothing more was ever done by this company, which constructed no road, and did not definitely locate any line, and whose actual corporate existence is a matter of some doubt. In 1866 (14 Stat., 79) the Union Pacific Railroad Company, eastern division, which had been authorized to construct this road, was required to designate the general route of the road and to file a map within a certain date.

The company did so, and a new withdrawal of lands was made under the act of 1866. Then all questions affecting the status of the lands inuring to the grant were settled, not on the basis of the proper designation of the line of route under the act of 1866, and the definitive withdrawal made under that act, but on the basis of the premature and irregular withdrawal of 1862 made on a line that never existed, and under an act that did not go into effect. The claims of all settlers who settled between 1862 and 1866 on lands withdrawn in 1862, where the lands afterward fell within the withdrawal of 1866, were rejected in favor of the company, whose rights were not acquired until 1866. Meanwhile, lands in the alternate even-numbered sections, within the limits of the old withdrawal, were held to have been increased in price to \$2.50 per acre, and were disposed of accordingly. The proceedings affected and determined the titles and price of lands for a breadth of forty miles across the entire length of the State of Kansas.

A former Attorney-General had said that where there was doubt then certainly existed, since what was doubtful was not granted. The modern rule appears to be that where there is doubt then certainly exists, because what is doubtful is granted. The difference in the two rules as applied to the allowance of indemnity for losses occurring before grant is a difference of more than half the volume of the grants to States and of a considerable percentage of the volume of the grants to corporations, the grants being thus constructively enlarged to this extent beyond the Congressional limit. It is, besides, a difference of one or two hundred million dollars to settlers who buy these lands of the railroad companies. If the rule of the Supreme Court were followed by the Department, more than four-fifths of all the railroad and similar grants could at once be closed up, the remaining lands restored to settlement, and the titles to any unsold lands heretofore improvidently conveyed to the railroads in excess of the legal volume of their actual grants be recovered by the United States.

Under the statutory provision requiring a map of definite location to be filed before any lands could be reserved the rights of settlers who settled before such map was filed, and in default of the filing of the map, before actual selection of the land for the company after the construction of the road, were protected in their settlements. Under the rulings of this office these rights were not recognized, but the lands and improvements of such settlers were decreed to the railroad. These proceedings went on until the lands taken from the settlers had aided in swelling the grant far beyond its maximum limits. Cases of this kind have been decided in this manner down to the present time, and others are still pending.

Q. Where lands are awarded to railroad companies in the way you have mentioned in your testimony do the companies receive money from the settlers for the sake of quieting the settlers' title?

A. Yes, sir; I have heard of settlers paying as much as \$50 an acre for land awarded to the railroads in this way.

Q. Have the laws generally been literally construed in favor of the railroads?

A. Yes, sir. The principle of law applicable to public grants—that they ought to be construed strictly against the grantees—has not been observed, although the exceptions to the grant are very strictly ruled against.

Q. That is to say, that the grants have been construed very liberally to the grantee and against the settler?

A. Yes, sir.

Whoever will carefully read even these brief extracts I have made from the voluminous testimony of this thoroughly informed gentleman, whose long connection with the General Land Office has made him the master of the subject, will see how feeble the citizen seeking a home on the public land even now is, in a contest with one of these corporations. He asks but a quarter section of land to improve and beautify by his labor a shelter and a fireside for his wife and children, but corporate power with its ill-gotten millions of the public lands hedges him in on every side. He moves with uncertainty; if any interpretation that power can force upon law can deprive him of his homestead and the fruit of his labor, he is certain to meet it when after five years of toil he demands his patent under the homestead law. In giving the foregoing extracts I have not followed the course of the evidence, but have selected passages from the different subjects considered.

So, sir, under this system the citizen is at the mercy of the corporation. Even a patent is no protection. We are told in the testimony of this accomplished witness that patents for land in Iowa at the demand of a land-grant corporation have been called in and canceled. Who that saw a few years ago a venerable citizen of that State almost deprived of his reason by the injustice he had suffered in common with hundreds of others of his fellow-citizens of that State, holding in his trembling hand a patent for a homestead, issued to him under the great seal of the nation, and demanding that you make good the patent for the land from which he had been driven by one of your favored land-grant corporations, the Des Moines Valley Railroad Company, and did not deep down in his heart curse this infamous system? The lands which the Government had actually patented to this old man and his neighbors, fertilized by their labor, was literally stolen from them under a shameful act of Congress for the benefit of a land-grant corporation, and to this day you have made no redress for the flagrant wrong.

And so, Mr. Chairman, even at this early day the fruits of this land-grant railroad system begin to ripen in all their bitterness. Citizens, after years of labor on their homesteads under the shelter of your homestead laws, driven out of their once cheerful homes and from fields fertilized by the sweat of their patient labor; soldiers who upheld the banner of the Union on many a field of death, by craft and subtlety deprived of their rights in the public domain; millions of acres of fertile lands, by facile, adroit decisions, secured to these corporations, even in excess of their grants, at the expense of bona fide settlers—millions of acres of land by heartless monopoly placed forever beyond the reach of landless and laboring men, the entire public domain permeated in every direction by grants the laws creating which are full of subtle and disingenuous provisions framed for dishonest advantage, while the combined power of these corporations, with more than kingly wealth, with lands sufficient to form more than eight great States within their grasp, a munificent gift of Congress from the rightful inheritance of labor, is molding the policy which will secure obedience to their commands, while the unshorn fields which once invited the labor of the landless now have written upon them the accursed word, monopoly—not free lands for freemen, with the plow in the hands of the owner, but landlords and tenants, great estates and shivering poverty. No man who feels as a man is wont to feel can contemplate the fruits of this system, its disingenuous methods, its corrupting practices, its arrogant and unblushing assertion of dishonest claims as against the just rights of the feeble, and the subserviency of official authority to its demands, without blushing for his country.

And here, Mr. Chairman, we stand at the close of this prolonged

session. Matters of trivial concern have occupied this great body. The greatest question before the American people cannot even obtain a hearing. Has the shadow of these great corporations fallen also upon this Capitol? Does the spirit that rendered these grants possible still stand in the way of abrogating them to the full extent of the right?

But what other results could have been hoped for? The great party which organized these corporations and gave them the lands which belonged to the people have learned to lean upon them for support. A party whose main support is corporate power is not likely to speak in the interest of labor. If these forfeited lands are ever brought within the reach of the landless it will not be by the party which made these grants. If the people of this country wish to assert their rights against the domination of corporate power, they must change the administration of their affairs. The continuance of the Republican party in the ascendancy means the ascendancy of powerful monopolies and that this generation shall see the utter and complete exhaustion of the public lands, and with the public domain, sir, goes the last hope of labor and the strongest pillar on which this Republic rests.

Sir, is there any parallel to this record? Thirty years ago, in the first gathering of its elements at Pittsburgh, the party in power resolved that the public lands should not be sold to individuals or granted to corporations, but should be held as a "sacred trust" to secure homes for "landless settlers."

Twenty years ago the same party, on its first advent into power, passed the homestead law and dedicated these public lands to the landless for free homes for freemen, yet within a period of fourteen years the same party gave to corporations 192,081,155.52 acres of these lands, authorized them to select the most fertile of these lands almost without limit, and have so administered the laws making these grants that by artful interpretations these grants are so enlarged that the agricultural lands are almost exhausted, and in a very few years the monopoly of lands by great corporations will be complete.

And now, when many of these corporations have, after repeated extension of the time for completing their railroads, finally forfeited a large portion of their grants, and only an act of Congress, the justice of which no man can question, is necessary to restore more than 96,000,000 acres of these lands to the people, a territory larger than the great States of Ohio, Indiana, and Illinois combined, that act cannot be obtained. And more than that, in this House as organized even the poor privilege of considering the subject cannot be secured.

And why were not these railroads completed within the time named in the respective grants? The answer is obvious. These corporations have waited until our ever-growing population, pouring in teeming multitudes westward and southwestward into the new States and Territories, have by their labor in countless fields developed the value of these great grants reserved from settlement and made them the foundation for the bonds which are to construct the roads. The time for the completion of the Northern Pacific road was twice extended before it forfeited its grant on the 4th day of July, 1879. The cost of constructing this road of 2,270 miles, as reported by the Auditor of Railroad Accounts, will be \$75,000,000, and this corporation holds its land grant of 48,215,040 acres in the fairest portion of the great West—land enough to complete its imperial railroad estate and leave princely estates to the railroad kings besides!

And yet in due course of time this road would have been built and paid for by the men who would have owned it, and the curse of land monopoly would not have been written on the face of these fair fields. It is said that the gentleman from Kentucky [Mr. KNOTT] and his associates, the minority of the Judiciary Committee, will report in favor of restoring to the people the unearned and forfeited millions of this grant, but if they do they will get no hearing in this House.

And so, sir, the party which passed the homestead law has not only granted to these corporations this vast body of the public lands but has invested these corporations with such imperial powers that they defy your Government and hold these forfeited lands in defiance of the public will; and yet these lands, to the extent of more than 96,000,000 acres, in equity, justice, law, and common honesty, belong to the people of the United States.

In this state of affairs is it at all surprising that a leading public journal of the Pacific Coast should indignantly say that—

There is nothing in the history of any civilized nation so monstrous, so stupid, so infamous as the legislation which has turned over these more than imperial gifts of land to the absolute ownership of a few bloodless, soulless, aspiring and brutal corporations. It is a direct bid for the establishment and perpetuation of a landed aristocracy in the United States as much more powerful than that of Ireland as France is larger than Belgium, and as much more able to defy the Government as an American Congress, restricted by a written Constitution, is less able to cope with such a combination as the British Parliament, which may make and mend the unwritten Constitution of the empire at its will. If Congress fails to restore this 83,674,478 acres of clearly forfeited land to the public domain, it will be guilty of a neglect of duty that must plant the seed and at some future day—not so far off, either—bear the fruits of a social and political revolution compared with which the late civil war was but a trifling episode.—*San Francisco Chronicle*, May 10, 1882.

The *San Francisco Chronicle* puts the number of acres forfeited lower than I do, but I am confident my figures are not above the actual amount. This system is not only monopolizing the public land, organizing an intolerable landed aristocracy, robbing the la-

boring-man who settles in good faith on the public lands of the fruits of his labor, fostering corporations which invade all departments of government and decide their own claims, but now, as a natural result, compel a resort to the public Treasury to remedy countless wrongs which their insatiable cupidity and extortions create. To illustrate this danger I call attention to Senate bill No. 1492, which has passed the Senate and now lies on the Speaker's table ready for action. The Senate report states that on the 23d day of July, 1866, there were granted lands to the Denver and Saint Joseph Railroad Company in alternate sections to a width of twenty miles and indemnity lands. The company remained quiet from 1866 to March 28, 1870, and then filed a map of the location of their road. On the 15th of April, 1870, the Secretary of the Interior withdrew the lands from settlement for the twenty-miles width, but in the mean time and up to April 15, 1870, the country had rapidly filled with settlers, entries had been made and patents issued by the United States to the settlers. In the language of the report:

The lands were sold and resold; pre-emptors, settlers, and owners improved the same, in many cases with valuable buildings, fences, and orchards, and paying taxes thereon, increasing the value in some cases to \$20 and \$25 per acre.

And the first notice that these settlers had that the patents issued by the United States were no protection against a claim of a railroad company was the bringing of suits against them in the Federal court, promptly followed by a decision that the lands were embraced by the grant to the corporation, and the settlers were turned out of the possession of lands improved by ten years of their labor, and this bill and report propose that there shall be paid out of the public Treasury \$2.50 per acre to each settler thus turned out of possession.

If this Government shall attempt to remedy all of the injustice which this infamous system will inflict; if the Government shall make reparation for every act of robbery by the corporations it has organized and enriched, can any man tell how many millions annually will come from the public Treasury? And can any honorable man read even this brief narrative of one of the countless acts of fraud, dishonesty, and extortion constantly occurring under this system without uttering an indignant protest against it?

I admit that for the present there seems to be no remedy for the monstrous wrong that has been done, but the evil would be in some degree palliated by the exercise of the power which Congress unquestionably has of declaring the forfeiture of the vast body of land now within its reach.

Here are more than 96,000,000 acres of this land wrongfully withheld from the public domain, granted without consideration to a few corporations; these corporations hold these lands by the same questionable methods which secured them from Congress. The grants are now owned by a few men whose only method in affairs is the employment of wealth. There is no question of the right of Congress to declare the forfeiture of these lands to the extent of these 96,000,000 acres. This monstrous outrage on human rights can be remedied. These men will still hold and monopolize over 100,000,000 acres, but these 96,000,000 can be reclaimed rightfully without even a question as to the justice of the act; that much at least, wrested from the jaws of monopoly and dishonor, can be secured for free homes for free men.

On the 16th day of January, 1882, I introduced House bill No. 2878, to declare these grants where the corporations failed within the time specified in the grants to fulfill the conditions forfeited and restoring the lands to the public domain, and on the 9th day of the same month I introduced House bill No. 2752, to secure the remaining public lands adapted to agriculture to actual settlers under the homestead laws. These bills were referred to the Committee on Public Lands. On the 6th day of February, 1882, my colleague [Mr. COBB] introduced House bill No. 3606, to declare the forfeiture of these lands and restore them to the public domain. This bill was referred to the Judiciary Committee. Other bills have been introduced. More than six months have elapsed and the Committee on Public Lands is as silent as death on these vital measures. The majority of the Judiciary Committee report ambiguously, but apparently in favor of letting the Northern Pacific alone, and by implication reaffirming in part a grant long since dead in the State of Michigan. We are assured that the minority of that committee will assert the just claims of the people in unambiguous terms.

I know it is customary to quiet the fears of our people by referring to the large figures of our public lands in the Commissioner's report, but if you deduct the 369,529,600 acres of the ice fields of Alaska, the Rocky Mountains, and the Sierras, and the vast arid and sterile plains which skirt those mountains, all of which are embraced in the computation of the public lands, and deduct over 200,000,000 acres in all of land grants yet to be filled—deduct all these and see how the figures shrivel and how little is left.

There are still in this House two members who were in the Congress which passed the homestead law and voted for its passage—the gentleman from New York, then from Ohio, [Mr. COX,] and myself. My friend from New York and myself at least have stood by that law from the beginning. Not an acre has been taken from the laboring-men of this country by his vote or mine nor an acre given to a corporation. Every bill giving these vast millions to the favorites of Congress has at least met our earnest resistance.

But the grants have been made, the public domain has been largely exhausted, and monopolizing corporations have been organized with imperial powers which defy the Government itself; motives and methods of corruption unknown until this policy was inaugurated threaten our free institutions; vast estates have been created by act of Congress, and the free outlet of labor from the power of capital is rapidly closing. The shadow of a new power rests upon this Capitol and the Departments. It may be that for the time the people of this country will not fully appreciate the injury done to their institutions, but sooner or later anathemas deep and bitter will fall from the lips of poverty and wretchedness on these measures, which under the perfidious mask of progress and development will enrich the few but deprive multitudes of men and their wives and children of happy and prosperous homes.

Public Building at Monroe, Louisiana.

REMARKS

OF

HON. J. FLOYD KING,
OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 31, 1882,

On the bill providing for a public building at Monroe, Louisiana.

Mr. KING said:

Mr. SPEAKER: I desire to correct a statement in the RECORD. On the 5th of the present month my colleague, Mr. ELLIS, on the motion of my colleague, Mr. BLANCHARD, "to suspend the rules and take from the Speaker's table the bill (S. No. 750) providing for the erection of a public building at Shreveport, Louisiana, and to pass the same," used the following words:

Now, Monroe has a large and commodious court-house which can be used for the Federal court, the State court not using it more than four months in the year, while the State district court and the supreme court, sitting in Shreveport, occupy its court-house nearly the entire year.

When this statement was being made I was busily engaged considering matters relating to the measure for the improvement of the Mississippi River, in which all here from my State and section feel most deeply concerned, and it escaped my notice at the time.

Now, I know my friend did not intend it, but he is mistaken, and stated what is not the fact. There is no such building in Monroe, and I feel assured he will himself duly make the correction necessary when I have rightly informed him.

Monroe is an important city in the district which I have the honor to represent; but there is not there a court-house of any kind belonging to the State, parish, or city in which the United States courts can be held except at great disadvantage and detriment to the public service. In the first session of the last Congress I introduced a bill to divide the State into two judicial districts—the eastern and western districts of Louisiana. This bill became a law a year ago on the 3d of March last.

It requires the courts of the western district (the United States circuit and district courts) to sit at four places, Opelousas, Alexandria, Shreveport, and Monroe. About the time I presented this bill I also introduced another for the erection of a public building at Monroe. My reasons for so doing were that there was no building in the city of Monroe adapted to the purposes of the United States courts, and, further, by reason of the fact that during the war of secession the Union forces burned the court-house at Monroe, a commodious and valuable edifice, which neither the State nor parish has since found it in its power to restore.

At the opening of the present Congress I reintroduced the last-mentioned bill, and it, with the petitions and papers relating to it, showing the necessity for this building, are yet in the keeping of the committee having such matters in charge. I hope for a favorable report from the committee at an early day, as I feel that the situation justly and urgently demands it.

When the bill comes before the House, which it will do, I know my colleague will give it his support, and I shall rely also upon the distinguished Representative from Michigan, [Mr. BURROWS,] looking then as favorably upon the claims of Monroe as expressed in his remarks on the above-mentioned occasions.

But, Mr. Speaker, I hope that my gifted colleague, ever ready to support with his eloquence and energy every measure for the good of his State and of the country, when he again has occasion to allude to interests of the district represented by myself, if he be not entirely certain of the correctness of his knowledge on the subject, will come to me first to set him right.

Sir, I approve of public works of this nature. They are not only of great utility and economy to the Government but serve to build up the waste places in our Southern land.

Adjudication of Private Claims.

SPEECH

OF

HON. OSSIAN RAY,

OF NEW HAMPSHIRE,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, April 22, 1882.

The House having under consideration H. R. No. 684, to afford assistance and relief to Congress and the Executive Departments in the investigation of claims and demands against the Government—

Mr. RAY said:

Mr. SPEAKER: I daresay the members of this House generally know that section 1059 of the Revised Statutes authorizes the House or the Senate, without the concurrence of the other, to send any claim to the Court of Claims for adjudication. This section provides that—

The Court of Claims shall have jurisdiction to hear and determine the following matters: first, all claims founded upon any law of Congress or upon any regulation of an Executive Department, or upon any contract expressed or implied with the Government of the United States, and all claims which may be referred to it by either House of Congress.

But one trouble with us here is the House seems reluctant to avail itself of the benefit of the last clause of this statute. We still insist on requiring the concurrence of the Senate, and *vice versa*, before a private claim can go to the Court of Claims for determination. We go on legislating in regard to private claims in the ancient way, so far as we legislate at all, like the Dutchman who persisted in going to mill carrying a stone in one end of his grain bag and his grain in the other, just as his grandfather had done, notwithstanding it was explained to him that a bushel of grain, instead of the stone, would balance the grist just as well and save him the trouble of going to mill so often.

Only last private-bill day your Committee on Claims tried in vain to send a claim to the Court of Claims by a resolution of the House alone, pursuant to the last clause of the statute just quoted, but to a majority of the House it appeared to be a proceeding so novel in its character that, although nearly everybody favored the relief proposed, still the House insisted on sending the resolution to the Senate for concurrence, where it may or may not pass. If the claim alluded to fails to receive consideration in the Senate or should be rejected there by ever so small a majority, our work here is practically lost, and the adjudication of the claim, either favorably or adversely, is thereby indefinitely postponed; whereas if the House had exercised its clear and undoubted authority to send it to the Court of Claims, under a resolution of the House alone, as the Committee on Claims reported, instead of a joint resolution, as the House finally voted, the claim might have been docketed already in the Court of Claims and at this moment be in process of adjudication and settlement.

Why is this hesitation and reluctance on the part of the House to avail itself of a plain provision of the statute which has been in force for years, and the evident purpose of which was to enable either House of Congress alone to refer any private claim to that court? In my judgment, the story of the Dutchman's grist is strongly in point. If the House will only faithfully avail itself of the plain provisions of existing laws, whereby private claims are referable to the Court of Claims through its own separate and independent action, we may by so doing relieve our Private Calendars to a considerable extent in that way, and enable the House to devote the time thereby saved to the consideration of business of a public or more general character. We shall also relieve some of our hardest worked committees of much thankless and unsatisfactory labor; and, what is better yet, shall obtain a judicial investigation of such claims by a court of judges appointed for and skilled in that special kind of work, before whom both claimants and the Government may be heard by counsel and where all witnesses may be subjected to the valuable test of cross-examination, and where also a complete record not only of the claim itself but also of all the proofs, both of a documentary character, as well as coming from witnesses, are carefully preserved for future use, and to which reference may be had at any time.

Of course a rule of procedure or of judgment must be prescribed for the guidance of that court whenever we send a claim there over which it has no jurisdiction under existing laws. The duty required of the court in regard to any particular claim sent there should be carefully and specifically provided for in the act or bill of reference.

I am heartily in favor of the provisions of the bill introduced by my colleague of the Committee on Claims [Mr. BOWMAN] and reported by him from that committee, which is now before the House. This bill is short; its provisions are plain and simple; it creates no new court or officer; and if adopted its effect will be to enable the House to relieve its committees and itself from the investigation of more than one-half the claims usually pending here for consideration and action.

The first section is:

Be it enacted, &c., That whenever a claim or matter is pending before any committee of the Senate or House of Representatives, or before either House of Con-

gress, which involves the investigation and determination of facts, the committee or House may cause the same, with the vouchers, papers, proofs, and documents pertaining thereto, to be transmitted to the Court of Claims of the United States, and the same shall there be proceeded with under such rules as the court may adopt. When the facts shall have been found, the court shall not enter judgment thereon, but shall report the same to the committee or to the House by which the case was transmitted for its consideration.

This section enables any committee of the House, without waiting for the action of the House itself—pursuant to the existing law—the ear of which it is often difficult to obtain on account of other business having priority of consideration as a matter of right, to send any claim to the Court of Claims for the investigation and determination of the facts upon which it is based. As before suggested, the House under existing law can do so, but the advantage of this section is, that it enables the majority of any committee charged with its investigation to cause the claim, with the vouchers, papers, proofs, and documents relating to it, to be transmitted to the Court of Claims, to be there proceeded with under such rules and regulations as that court may adopt.

The second section of the Bowman bill is as follows:

SEC. 2. That when a claim or matter is pending in any of the Executive Departments which may involve controverted questions of fact or law, the head of such Department may transmit the same, with the vouchers, papers, proofs, and documents pertaining thereto, to said court, and the same shall be there proceeded with under such rules as the court may adopt. When the facts and conclusions of law shall have been found the court shall not enter judgment thereon, but shall report its findings and opinions to the Department by which it was transmitted, for its guidance and action.

This is substantially the law already, but under the provisions of the statutes now in force the court is bound to render a judgment whenever a claim is sent to the Court of Claims by order of the head of an Executive Department, the same as in a suit begun in the usual way in that court. This section will enable such head of a Department to transmit a claim to that court for the purpose of ascertaining the facts and conclusions of law touching its merits.

It also provides that the Court of Claims in cases arising under it may not enter judgment, but shall report its findings and opinions to the Department from which they were sent. A favorable finding and conclusion under this section by the court might be adopted, and the claim paid, provided such payment is authorized by law, otherwise the head of such Department would transmit the finding to Congress, with a suitable recommendation for payment or otherwise, as the facts found and conclusions of law arrived at warrant. The benefit of this section is that the investigation of claims which are often presented to the various Executive Departments of the Government when Congress is not in session, and which by reason of the *ex parte* character of any investigation a Department may make—often partial and unsatisfactory, both in character and result—may be proceeded with at all times as in the due and proper course of legal proceedings, with the aid of opposing counsel, whether Congress is in session or adjourned.

The third section of the bill is:

SEC. 3. That the Attorney-General, or his assistants under his direction, shall appear for the defense and protection of the interests of the United States in all cases which may be transmitted to the Court of Claims under this act, with the same power to interpose counter-claims, offsets, defenses for fraud practiced or attempted to be practiced by claimants and other defenses in like manner as he is now required to defend the United States in said court.

The chief good of this section is that the proceeding at once becomes a suit in which both the rights of claimants and the interests of the United States are watched and protected by the appearance of counsel on both sides. It enables the Government also to interpose any defense, counter-claims, or set-off which may be just and equitable. And by the last clause of the first section it is provided that the court shall not enter judgment, but shall report back the facts found to the committee, or to the House, from which the case was transmitted, for further consideration and final action. This proceeding is analogous to the hearing before and report of an auditor or referee or the special verdict of a jury setting forth the facts, and submitting them to the court for the rendition of a proper judgment, which obtains largely in all parts of the country and under every system of jurisprudence.

SEC. 4. That in the trial of such cases no person shall be excluded as a witness because he or she is a party to or interested in the same.

This section provides, that in the trial of cases arising under the bill no person shall be excluded as a witness because he or she is a party to or interested in the same. It is, in my judgment, a wise provision. Sections 1079 and 1080 of the Revised Statutes of the United States, which forbid the use of the testimony of a claimant or any person interested, except at the instance of the Government, in cases where the Court of Claims now has jurisdiction under existing laws, ought to be repealed. Everybody but the claimant and other parties interested with him, or those from whom he derived his claim, are allowed to testify already. They are excluded simply on the ground of interest.

The doctrine of excluding witnesses from testifying because they happen to be peculiarly interested in the subject-matter of a claim or suit has become obsolete. In most if not all of the States no witness is at the present time excluded or excused from testifying by reason of his interest in a cause or on account of being a party to the same. This rule obtains in both the Federal and State courts. Even

in criminal causes, both in the Federal courts and in the courts of all or nearly all of the States of the Union, respondents are allowed to testify as witnesses in their own behalf. It has come to be regarded as a valuable means of ascertaining the truth of a criminal charge against a respondent that he be allowed, if he will do so, to give his own account of his connection or want of connection with the charge on account of which he has been indicted. Only in the Court of Claims is a party excluded. This relic of by-gone days should be repealed *in toto*, not only as to cases arising under the provisions of the bill now before the House but in all cases which come before the Court of Claims, and parties interested be allowed to testify the same as other witnesses.

The fifth section of the bill is as follows:

SEC. 5. That reports of the Court of Claims to Congress under this act, if not finally acted upon during the session at which they are reported, shall be continued from session to session and from Congress to Congress until the same shall be finally acted upon.

I regard this section as one of the most valuable contained in the act. Under the present practice the same claim is sometimes the subject of a dozen different investigations before the various committees of the House and Senate in successive Congresses. New bills are introduced Congress after Congress, new hearings had before the committees of each successive Congress, and sometimes the claim is pending for twenty-five and even fifty years before final action. This bill contemplates one thorough and complete judicial investigation, and by section 5 a claim, if not finally acted upon at the session upon which the Court of Claims reports its findings of the facts and conclusions of law, is continued from session to session and from Congress to Congress until final action may be had.

A claim presented here, complicated in its character, involving difficult questions of law and fact, by a majority vote of the committee before whom it is pending may be sent to the Court of Claims, and thereupon the Attorney-General, or any of his assistants by his direction, must appear for the defense and protection of the interest of the United States.

The claimant can put in such proofs and have such witnesses examined as he chooses; likewise the Government. Any evidence which the claimant does not offer may be adduced by the United States and become a part of the record. Each side has the benefit of counsel to present the matter to the court, and then the facts are found by an eminent, skilled, and disinterested tribunal, and embodied in a report to be submitted to Congress, printed and distributed, and the subject-matter thereof continued from Congress to Congress until final action is taken. If, touching any matter thus reported back to Congress from the Court of Claims, any member questions or doubts the correctness of the finding, a reference to the record filed and preserved in the Court of Claims will show at once the entire testimony upon which the court based its findings. No judgment in claims embraced under the provisions of this bill is rendered by the Court of Claims but the payment and satisfaction of the claims or the rejection and denial of relief is awarded by Congress, no matter whether the claim was referred to the court by a committee or by either House, or whether it was transmitted from an Executive Department.

There are many valuable provisions contained in the bill reported by the Select Committee on Reform in the Civil Service, the substance of which was introduced by the gentleman from Tennessee, [Mr. HOUSE,] and which has been offered as a substitute for this bill. So in regard to the Edmunds bill, so called, introduced here by the honorable gentleman from Wisconsin, [Mr. BRAGG,] but I trust that neither of these bills will be adopted as a substitute for the one proposed by the Committee on Claims. Both those bills, the House bill and the Edmunds bill, are more comprehensive in their character, and sections of each probably might be adopted with advantage by way of amendment to the present jurisdiction and course of procedure in the Court of Claims. The Bragg or Edmunds bill is objectionable in my mind on account of the second section requiring a claimant to petition the Department of Justice and to obtain leave by indorsement thereof from the Attorney-General before being allowed to begin a suit against the United States. I think no claimant ought to be required to ask leave of anybody to bring a suit against the Government any more than against any other person. In such matters the Government should stand on the same footing as individuals in all respects.

The provisions of the third section of the Edmunds or Bragg bill, allowing a suit to be begun in the United States circuit court of the district in which the claimant resides, is a good one. Claims less than five or ten thousand dollars in amount which may now be sued in the Court of Claims in Washington should be allowed to be prosecuted in the United States circuit court of the district where the claimant resides. Claims of larger amount are of sufficient importance probably, so that the claimant might be required, as now, to proceed in the Court of Claims here. I would give a claimant the option of commencing his action in the Court of Claims or in the United States circuit court of the district in which he resides so far as claims less than five or ten thousand dollars in amount are concerned; that is to say, give the circuit courts of the United States and the Court of Claims concurrent jurisdiction up to five or ten thousand dollars, as the judgment of the House shall decide.

Section 707 of the Revised Statutes, allowing an appeal to the Supreme Court from the Court of Claims by the Government in all cases, but not allowing a claimant to appeal unless the amount in controversy exceeds \$3,000, is unjust and ought to be modified. Claimants should have the same rights and privileges before the court in all respects as the United States. Both the Government and the citizens should be equal before the law. Of course in any bill enlarging or extending the jurisdiction of the Court of Claims, the claims of persons disloyal during the late civil war should be excluded. I assume that no committee of the present House would send a disloyal claimant to the Court of Claims under any circumstances. I take it that this Congress, at least, would reject such a claim, even if it had been sent to the Court of Claims from the House or from a committee and a favorable finding had been reported back from that court. Just war claims due to loyal claimants ought to be promptly adjudicated and as promptly paid. Such as have not been adjusted ought to have every reasonable facility provided for their adjudication and settlement as soon as may be. We are seventeen years from the close of the rebellion. Just claims growing out of that war ought to have been paid long ago. Congress, however, should retain full control over unadjusted war claims in order to arrest the payment of any such claim to a person whose disloyalty may have been overlooked or not discovered in the Court of Claims. I can see no objection under the laws now in force to sending war claims, so called, to the Court of Claims for adjustment by vote of the House. Nor do I see any objection to enabling a committee, or the head of an Executive Department, as proposed by this bill, to send such claims to the Court of Claims to be investigated and the facts relating thereto reported back to Congress for final action like other claims embraced within its provisions.

The amendments proposed by the gentleman from Indiana [Mr. HOLMAN] are the following:

SEC. — The jurisdiction of said court shall not extend to or include any claim against the United States growing out of the destruction or damage to property by the Army or Navy during the war for the suppression of the rebellion, or for the use and occupation of real estate by any part of the military or naval forces of the United States in the operations of said forces during the said war at the seat of war; nor shall the said court have jurisdiction of any claim against the United States which is now barred by virtue of the provisions of any law of the United States.

SEC. — In any case for a claim for supplies or stores taken by or furnished to any part of military or naval forces of the United States for their use during the late war for the suppression of the rebellion, the petition shall aver that the person who furnished such supplies or stores, or from whom such supplies or stores were taken, did not give any aid or comfort to said rebellion, but was throughout that war loyal to the Government of the United States, and the fact of such loyalty shall be a jurisdictional fact, and unless the said court shall, on a preliminary inquiry, find that the person who furnished such supplies or stores, or from whom the same were taken as aforesaid, was loyal to the Government of the United States throughout said war, the court shall not have jurisdiction of such cause, and the same shall, without further proceedings, be dismissed.

They are unobjectionable and I think unnecessary. Sections 1072, 1073, and 1074 of the Revised Statutes already make ample provision, as it seems to me, against the allowance of the claims of persons disloyal to the Government during the late civil war. The proviso at the end of the fourth clause of section 1059 is in these words:

Provided also, That the jurisdiction of the Court of Claims shall not extend to any claims against the United States growing out of the destruction or appropriation of or damage to property by the Army or Navy engaged in the suppression of the rebellion.

Therefore I contend that while these amendments do no harm, and are right enough in principle, still all their essential provisions have long been the law of the land. I want to assure the gentleman from Indiana [Mr. HOLMAN] and his Democratic associates on this floor no fear need be entertained that a disloyal claimant will have the privilege of going before the Court of Claims while the Republican party control the committees of this body, much less, if by fraud, accident, or mistake such a claimant through the action of some committee obtains a hearing before the Court of Claims, would the Republican majority of this body ever vote to pay such claimant a single dollar; and I do not think the prospect of a Democratic majority in the House of Representatives is so brilliant or imminent in the near future that my friend need be particular to require the additional safeguards proposed by his amendments on that account, especially when the same thing in substance has already been enacted in the Revised Statutes.

It is a fact that in Italy, Germany, France, and England private citizens are allowed to prosecute their claims against the government before a judicial tribunal, and have such claims investigated and adjudicated against the government or the crown with the same facility as against individuals. From a printed volume of the reports on alien claims in the second session of the Forty-third Congress, a book filled with valuable information upon this question, I find on page 74 that—

According to the laws of France, an action may be brought against the state by a private individual either before the civil or administrative tribunals, according to the nature of the case. If the state is sentenced to pay a sum of money, such sum is taken from the budget of expenditures, and as it is the duty of the legislative branch to vote the budget, it follows that the legislative branch really provides for the payment.

From the same volume the law and practice of Germany with respect to private claims against the government are said to be:

In the procedure where claims against the Government come up before the administration or judicial tribunals for investigation, and in the procuring of evi-

dence in such procedure, the same rules obtain, in general, as in the consideration, determination, and deciding of such claims when presented against other parties. In exceptional cases only are directions to be found prescribing a particular feature of the procedure in the case of a claim against the empire.

In the report to the Secretary of State, Mr. Fish, from General Schenck, our minister to England at that time, contained in the same volume, I find:

With respect to claims made against the crown, the common-law method of obtaining possession or restitution of real or personal estate has, for the most part, been by petition of right, a form of proceeding dating from the time of Edward the First; but in 1860 an act of Parliament was passed (23 and 24 Vic. C. 34) by which provision was made for assimilating as nearly as may be the proceedings on petitions of right to the course of practice and procedure in actions and suits between subject and subject, &c.

At the time of the publication of the volume to which I have referred it had not been settled in England whether the petition of right would lie for breach of contract or to recover money claimed by way of debt or damage or for any other object except specified chattels or land. Since that time, however, the question has been determined in the case of *Thomas against The Queen*, reported in the tenth volume of the *Queen's Bench Law Reports*, where it was decided that the petition of right will lie for a breach of contract resulting in unliquidated damages. So that our country, Mr. Speaker, is a long way behind the Old World monarchies and governments in not providing suitable tribunals wherein our citizens may bring to the bar of judgment their own Government, with whom they have dealt, for breach of contract, or against which they have just claims sounding in tort for damages.

The Government can always sue the citizen upon any lawful demand. It pays no interest without a special agreement or law to that effect, nor in any case are exemplary damages recoverable against it. I contend, therefore, that Congress ought forthwith to enlarge the jurisdiction of the Court of Claims as this bill provides, or else enable our citizens to prosecute their private claims against the Government in the different circuit courts of the United States. In respect to a large class of claims which come before Congress upon bill or petition, our committees can determine; if this bill becomes a law, whether such a case exists that the party ought to be required to go before the Court of Claims and establish the facts bearing upon his claim after the manner of other cases there prosecuted. Experience shows that by sending private claims to that court the winnowing process of a regular trial of their merits by opposing counsel, cross-examination of witnesses, &c., clears them up wonderfully. There is no real ground for supposing unjust claims will be allowed to any considerable extent or amount.

The following table of the aggregate amounts claimed and recovered in the Court of Claims from December 1, 1867, to December 1, 1880, shows that the interests of the Government have been carefully guarded by those representing it before the court as well as by the court itself:

December term—	Aggregate claimed.	Aggregate recovered.
1867.....	\$2,848,140 26	\$810,028 38
1868.....	3,335,803 24	1,228,643 31
1869.....	6,073,163 55	953,597 27
1870.....	5,981,314 84	1,224,757 29
1871.....	3,716,724 69	3,354,852 18
1872.....	7,079,608 29	3,884,873 06
1873.....	6,274,157 41	2,418,510 85
1874.....	9,064,061 85	2,967,374 22
1875.....	6,065,513 53	1,138,078 58
1876.....	6,848,492 46	251,728 89
1877.....	3,622,624 34	254,267 31
1878.....	13,959,912 08	1,017,182 32
1879.....	1,681,732 80	331,332 86
1880.....	3,764,279 86	502,014 54
Total.....	80,315,529 20	19,770,540 98

In conclusion, the following remarks in relation to the Court of Claims by Hon. Charles O'Connor, the well known and eminent New York lawyer, in an argument reported in a volume recently published entitled *Great Speeches by Great Lawyers*, seem peculiarly appropriate:

The court itself is the first-born of a new judicial era. As a judicial tribunal, it is not only new in the instance, it is also new in principle. So far as concern the power of courts to afford redress, it has heretofore been fundamental that the sovereign can do no wrong. This court was erected as a practical negative upon that vicious maxim. Henceforth our Government repudiates the arrogant assumption, and consents to meet at the bar of enlightened justice every rightful claimant, how lowly soever his condition may be.

Prior to the institution of this court, all rights as against the nation were imperfect in the legal sense of the term; every duty of the nation was a duty of imperfect obligation. There was no judicial power capable of declaring either: no private person possessed the means of enforcing the one or coercing the other. But effectual progress has been made toward giving form and method to the administration of justice between the nation and the individual. This court enables the latter to obtain an authoritative recognition of his rights. No more is needed: for in no case can a state, after such recognition, withhold payment and yet retain its place in the great family of civilized nations.

The ordinary jurisdiction of the court bears a strong resemblance to the narrow cognizance at common law; but its extraordinary jurisdiction over all claims which may be referred to it by either House of Congress extends its power to the utmost limits attainable by juridical science in its fullest development. In this aspect its dignity and importance as a governmental institution cannot be too highly appreciated. As a means by which rightful claims against the Government may be

readily established, and those not founded in justice promptly driven from the portals of Congress, it must exercise a most healthful influence.

But we are authorized to look higher than the mere convenience of suitors and the dispatch of public business. Enlightened patriotism will contemplate other and more important consequences. Caprice can no longer control. Here equity, morality, honor, and good conscience must be practically applied to the determination of claims, and the actual authority of these principles over governmental action ascertained, declared, and illustrated in permanent and abiding forms. As step by step in successive decisions you shall have ascertained the duties of government toward the citizen, fixed their precise limits upon sound principles, and armed the claimant with means of securing their enforcement, a code will grow up giving effect to many rights not heretofore practically acknowledged.

In it will be found enshrined for the admiration of succeeding ages an honorable portraiture of our national morality and a full vindication of the eulogium recently pronounced upon our people by the highest authority in the parent state. "Jurisprudence," says Lord Campbell, in *The Queen vs. Millis*, "is the department of human knowledge to which our brothers in the United States of America have chiefly devoted themselves, and in which they have chiefly excelled."

Are vituperation and a paltry success in securing Federal offices the sole and sufficient tests of national statesmanship?—A mental query for Hon. J. D. WHITE, of Kentucky.

REMARKS

OF

HON. ALBERT S. WILLIS,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 6, 1882.

The Committee of the Whole on the state of the Union having under consideration the sundry civil appropriation bill—

Mr. WILLIS said:

Mr. CHAIRMAN: I move *pro forma* to strike out the last word. During my five years' service upon this floor I have not felt called upon to trespass on the time of the House for any personal explanation or defense. There has fortunately been no necessity for it. No gentleman on either side until yesterday has ever seen fit either directly or indirectly to make any remark or statement which called for a reply of a personal character.

COURTESY TO AN ABSENT COLLEAGUE.

It was reserved for a member [Mr. WHITE] who since our first acquaintance has always been somewhat profuse in his expressions of friendship, and one, too, whom I regret to say is from my own State, to interrupt, to mar this proper and pleasant experience, and to compel me for once at least to follow his bad example by referring to matters which are of a quasi-private nature, and which certainly have not the remotest bearing upon any question now or hereafter to be under discussion upon this floor.

Mr. HISCOCK. If the gentleman will allow me a single suggestion—

Mr. WILLIS. I anticipate the suggestion of the honorable gentleman in charge of the bill, and I say to him that I prefer to proceed now, and that I will be as brief as possible.

Yesterday, Mr. Chairman, in the progress of debate upon this bill, although formally notified by my friend from Illinois [Mr. TOWNSEND] that I was temporarily at one of the Departments, my colleague [Mr. WHITE] saw fit, going out of his way in the discussion upon the bill now pending, to refer to a circumstance connected with my election to this Congress; and not content with that, but pursuing a course usual with him, to ask that certain newspaper comments made at the time upon that circumstance should be incorporated in his remarks. He has withheld those remarks for revision, which with him means that he wants more time to put his venom into them.

I cannot, therefore, read his exact words; but I will state only the substance as given to me by the stenographic reporter. The substance of those editorials was a charge against me of personal dishonor, stating that I was unfit to represent the Democracy of the fifth district of Kentucky on this floor.

THE HEAD AND FRONT OF MY OFFENDING.

The ground of that charge, the only ground (and I challenge my colleague or any one else here or elsewhere to state any other ground) was that a controversy between myself and Hon. William B. Hoke, a brother Democrat of my district, in regard to our candidacy for Congress, had been settled by lot. Now, if there is a single incident connected with my private or political life, except that one fact that my last contest for Congress was settled by lot, I challenge here and now its production. If my colleague in that vast lumber-room of his mind, where he seems to keep stored away, labeled and ready for future use, the stale slanders, the dead and decayed charges, the exploded malice of the past—if he can find even there another circumstance which he thinks is against my personal or private character, I call upon him now to produce it.

On that single, solitary fact, then, he saw proper, not only on yesterday, but upon to-day, a few minutes ago, to violate the rules by interjecting an allusion which, though intended to excite a laugh, was singularly unsuccessful in the accomplishment of its object.

A SENSIBLE WAY TO SETTLE CONTESTS AMONG FRIENDS.

Now, sir, what was that which was settled by lot? It was this: Judge Hoke and myself—

Mr. WHITE. Will my colleague allow me to interrupt him?

Mr. WILLIS. Not now; I will allow my colleague when I am through.

The CHAIRMAN. The gentleman declines to yield the floor.

Mr. WILLIS. When I have concluded what I have to say, I am perfectly willing he shall be heard for an hour if the House shall desire it.

Judge Hoke and myself had been for fifteen years intimate personal friends. Our friends were mutual. A contest had arisen between us, and in order to settle that contest without further unfriendly feeling, at his suggestion we met and determined by lot which of us should be the candidate, the Democracy of that district having a majority of some 7,000. Now, then, that was the whole of it.

THE LAW.

Is my colleague well enough acquainted with the laws of his own State to know that that method of settling contests is authorized by the statutes of Kentucky? Does he know that the constitution of his State also recognizes and authorizes such a mode of settlement? Section 6 of article 4 of the constitution of Kentucky reads as follows:

The judges [of the court of appeals] at the first term of the court succeeding their election shall determine by lot the length of time which each shall serve; and at the expiration of the service of each an election in the proper district shall take place to fill the vacancy. The judge having the shortest time to serve shall be styled the chief justice of Kentucky.

In chapter 33, article 5, of the general statutes are the following sections:

SEC. 4. If two or more persons shall be found to have received the highest and an equal number of votes for the same office, so that the election cannot be determined among the candidates by a plurality of votes, it shall be determined by lot, in such manner as the board [for examining returns] may direct, and in the presence of not less than three other persons.

With reference to electors of President:

SEC. 5. * * * But if none is elected, then the board shall determine the election by lot between those having the highest and equal number of votes.

Does he know enough of the laws of his country to know that in two-thirds of the States of the Union contested elections, even after the people by a vote have become a party to them, have been settled in the same way?

Mr. WHITE. Will my colleague allow me to have the law read?

Mr. WILLIS. I decline to yield just now.

A MEMBER OF THE ELECTORAL COMMISSION DETERMINED "BY LOT."

Does he know, Mr. Chairman, that even the electoral commission, one of the most important judicial bodies that ever sat in any country, as a part of the unwritten history of this land, was determined by lot? What I mean to say is, that on this floor five members were to be selected. Two gentlemen, Mr. TUCKER and Mr. HUNTON, both of Virginia, were contending candidates before their Democratic friends for the honor of being on that commission. One only from the same State could be selected. It was a friendly contest, and they wanted to determine in a friendly way. They met in yonder committee-room, and as the Hon. BENJAMIN H. HILL, then a member of this House, who had been selected as umpire, refused to act, they placed the names in a hat, and a page, blindfolded, drew therefrom the name of one of those two gentlemen, whose judgment, differing from the other for aught we know, might have decided the right of the Presidency of the United States.

Mr. ARMFIELD. Joshua divided the land of Canaan among the Israelites by lot.

Mr. WILLIS. I am coming to my friend's scriptural allusion in a little while. My worthy colleague is perhaps as ignorant of that part of the history of the country as he appears to be of the statutes of his own State.

The CHAIRMAN. The gentleman's time has expired.

Mr. ATKINS. I will take the floor and yield to the gentleman from Kentucky.

Mr. WILLIS. I am obliged to my friend from Tennessee.

THE GOSPEL—"THE LOT CAUSETH CONTENTIONS TO CEASE."

Now, the gentleman claims to be a biblical student; and in this very Bible in which he claims to have studied so well, although not judiciously, judging by his behavior here, I find in Proverbs—I will give him the chapter and verse—chapter xix, verse 18—and I will take that as a text, if you please, for my remarks in this connection:

The lot causeth contentions to cease.

To read further, as my friend the gentleman from North Carolina [Mr. ARMFIELD] has suggested, we find that among the Hebrews the land of Canaan was divided by lot.

Does the gentleman know that one of the twelve apostles was selected by lot. I will refer him, if he does not know it, to the Acts, first chapter and twenty-sixth verse:

And they gave forth their lots; and their lot fell upon Matthias; and he was numbered with the eleven apostles.

Now, sir, with all of this legal and biblical authority before me I ask if it was not in order and not entirely proper for me to settle a political controversy with an opponent by lot, without being subjected to unkind and unjust criticism?

"LET THE DEAD PAST BURY ITS DEAD."

Mr. Chairman, I regret that my action in this regard should have been referred to now and here. I regret it not because of the fact itself, for I would under similar circumstances do the same thing. I regret it, however, because it necessitates an explanation which takes the time of the House without profit to any one, and especially because it seeks to revive memories which are and of right ought to be long since forgotten. I express my own feelings, and I believe I express the feelings of all connected with my late canvass, when I say that all unkind memories, if any existed, were put aside with the occasion that gave rise to them. I am not, sir, I hope, to be found like the blind bat clinging to the rotten boughs of the past, or like the owl hiding in the caverns of the dead, but, with the permission of the honorable gentleman from New York, [Mr. ROBINSON,] who has charge of that bird upon this floor, I would prefer, like the eagle, to go forward and upward, ignoring the past and looking only to the brighter prospects which the future may present.

The CHAIRMAN. Debate has been exhausted on the pending amendment.

Mr. WILLIS. I withdraw the amendment.

Mr. McMILLIN. I renew the amendment and yield the time to the gentleman from Kentucky.

Mr. VALENTINE. To that I object.

The CHAIRMAN. The gentleman has the right to yield the floor.

Mr. VALENTINE. I think we have had enough of these personal explanations and these statements of personal grievances, and this is not the time for it. Let us go on with the consideration of this bill, and then if the gentleman wants to make his personal explanation he will be able to have an hour or more, if he wants it.

The CHAIRMAN. The Chair does not think the objection will lie against the right of the gentleman to yield the floor. The gentleman from Kentucky is recognized.

FACTS WHICH "POINT THE MORAL" IF THEY DO NOT "ADORN THE TALE."

Mr. WILLIS. Now, sir, let it be borne in mind that my colleague resides several hundred miles from my district, that no political considerations influenced him to allude to my canvass, as we have a Democratic majority of over 7,000, and even his reckless imagination would not suggest the hope of carrying the district for his party; let it be further remembered that my constituents indorsed my action by an overwhelming majority, a vote lacking only 275 of being equal to the combined vote of my two competitors; when to these is added the further fact that my colleague has professed always the most cordial personal friendship, what words can exaggerate the hypocrisy and small malice of this attempt to attack and injure my record? He has done what I venture to say no man in my district, whether a personal or political enemy, ever thought of doing—he has cut out these editorials written nearly two years ago during an exciting canvass, and has had them hid away in his desk until, availing himself of my momentary absence, he obtained leave, the House not knowing their nature, to print them as a part of his "five-minute speech."

If this attempt to smirch my reputation was limited to this floor, where my colleague and his peculiar methods are known, it would have been entirely harmless, although still utterly unjustifiable. The position, however, which he temporarily holds enables him, although by an abuse of its privileges, to place in the permanent record of the proceedings of Congress, to be carried where he and I are unknown, these newspaper comments, born as they were of the passion of the hour, and except for his effort now entirely forgotten and unheeded by any of the parties concerned. These comments were, as he well knew, based upon the single fact which I have stated, that is, that myself and Democratic competitor determined by lot the issue of our candidacy. He himself will not now, sitting in calm judgment upon that act, characterize it in the language of these two newspapers. His silence assures me that he does not and will not do so; and yet after the lapse of nearly two years he, a Representative of the American Congress, goes out of his course to call attention to this incident of my canvass, and having no charge himself which could be submitted or adjudged sufficient among honorable men, he skulks behind the charges and insinuations and epithets of others, and others, too, whose names even are unknown to him. And this he has done without the slightest excuse or provocation, either personal or political. For petty and reckless meanness I will challenge my colleague, even from the abundant material which his previous acts afford, to present a parallel to this.

"RUNNING A MUCK AT ALL CREATION."

Sir, when I recall my colleague's previous conduct, and I need go no further than the proceedings of this Congress, I am not surprised at this personal attack. It is entirely in keeping with the ideas of propriety which seem to control his legislative action. From the beginning to the end of his Congressional career he has been treading the peaceful paths of war. Far and wide his poisoned arrows have flown, and though they have all fallen harmless at the feet of their intended victims, it was not that he so desired or expected. The heart that inspired was strong with malice and bitterness; it was the brain that directed and the arm that wielded whose weakness baffled their purpose. If opportunity for attack has not been afforded him, he has, as in this instance, made an opportunity for himself. No character has been too pure, no amenities or privileges of

legislative life have been too sacred to guard against his open slanders and stealthy insinuations. Neither age, nor high official station, nor previous good conduct, nor the sanctities of private life have furnished protection against his causeless and unmanly assaults. Party ties as well as personal friendship have been trampled under his feet. Like some wild Malay he seems to be "running a muck at all creation."

Sir, from the abundant facts furnished by the record I shall select four or five specimens which will more than justify every statement I have made.

"ACHILLES'S WRATH"—COLONEL G. C. WHARTON ITS FIRST VICTIM (I).

The very first official act of my worthy colleague was the introduction of a resolution requiring the Attorney-General to "furnish information relative to the conduct of Federal officers in Kentucky." Now, sir, that resolution upon its face would seem to have been drawn in the interest of the public and in the performance of some high official duty. Perhaps it was. I will not undertake to judge any man's motives. Those he answers for to a higher power. But I will state here some facts that are known in Kentucky, and known to all the Representatives of Kentucky upon this floor. In the light of these facts let his conduct be judged.

In the year 1874, by methods which, if the newspapers are to be credited, were not strictly in the line of "civil-service reform," but which I will not imitate his bad example by recalling, my colleague was elected to the Congress of the United States, a calamity that repeated itself in 1880, but which—and here I voice the sentiments, I believe, of nine-tenths of the people of Kentucky, Republicans and Democrats alike—will never occur again. In the Forty-fourth Congress my colleague was here; at the same time Colonel Gabriel C. Wharton held the position of district attorney for the State of Kentucky. Colonel Wharton had served gallantly in the Federal Army, and when his partner, General B. H. Bristow, was made Solicitor-General, he was appointed to the place thus made vacant. That position he held for ten consecutive years, and finally, with the good will and esteem of all our citizens, voluntarily resigned, the only *bona fide* resignation that has ever occurred among Federal officeholders in our State. Now, it seems—and I give this upon the authority of Colonel Wharton, and I believe every word he says—that during his official service, some eight years ago, Mr. WHITE, then just elected to Congress, and therefore with a pardonable sense of his power and innate greatness, wrote him a letter requesting that he (Wharton) should release from fine and imprisonment certain clients of the new-fledged Congressman who had been arrested, proved guilty, and convicted of that little diversion not uncommon among his supporters, and known to the country as "moonshining." Colonel Wharton, having the fear of the law rather than of the Congressman before his eyes, declined the unique request, and from that hour until now he has been pursued by an "avenging Nemesis" in the person of my amiable colleague, who, as we all daily see, can "smile and smile and still be"—an enemy.

The resolution I have cited was in part aimed at Colonel Wharton, who is as honest and as honorable a gentleman as there is in the State of Kentucky. Not only that, but in one of his numerous "personal explanations" my colleague, knowing that Colonel Wharton, because of his long familiarity with the revenue laws, had been employed by the distillers of Kentucky as their counsel in Washington, and knowing that while holding that position he could not, without detriment to the interests of the clients whom it was his sworn duty to protect, engage in a controversy with him, bravely denounced him on this floor as a lobbyist and a corrupt man—upon this floor, where his victim was not allowed either to act or speak. If these facts are true, and they rest upon the evidence of honorable gentlemen, I submit that my colleague, in the introduction of this resolution, while illustrating the peculiar phase of his legislative character upon which I am now commenting, was seeking to make this House the instrument of personal revenge and private grievances.

But who else has he fixed his fangs upon? Rather, Mr. Chairman, ought I not to ask who has escaped his wrath, real or simulated? And I refer to these cases as explanatory of his attack upon me, and as showing how reckless his course in this regard has been. Need I recall the numerous scenes he has precipitated upon this House, when the interposition of the arresting officer has been suggested, if not actually invoked?

HON. W. D. KELLEY—A PATHETIC AND MEMORABLE SCENE.

Need I remind gentlemen around me of that pathetic and memorable occasion, when the venerable father of the House, Hon. W. D. KELLEY, who, irrespective of party feeling or differences, has enjoyed the confidence and esteem of the country for a quarter of a century, was goaded to the last point of endurance by the repeated charges and insinuations which my colleague without warrant had hurled against him as chairman of the Ways and Means Committee? Can we ever forget the touching allusion to his family, his children, to whom as his chief legacy he desired to leave a name free from reproach or suspicion of dishonor? Can any one on this floor fail to denounce the attack or the series of attacks upon Mr. KELLEY as anything less than legislative paricide? And what will the members of this House think when I inform them that my colleague, in a pamphlet which seems to be a full collection of his many eloquent speeches, motions to adjourn, &c., has added an appendix contain-

ing another fling at his venerable foe, based upon a transaction alleged to have occurred fifteen years ago!

JUSTICE JOHN M. HARLAN PAYS THE PENALTY FOR "DESERPTION."

What other victim has this Achilles of peace dragged at his chariot wheels? Is no respect to be shown upon this floor for the highest court of our land? It seems not, if my colleague's views are to prevail. Justice John M. Harlan, because forsooth he does not recognize in Hon. J. D. WHITE the Moses who is to lead his party in Kentucky out of the wilderness—Justice Harlan must be sent down to posterity, as far as this CONGRESSIONAL RECORD can do it, which, fortunately for him and perhaps for all of us, is not very far, as a "trickster" who "deserted us"—I presume the "us" means J. D.—"in the hour of our greatest danger." As Justice Harlan was a brave and gallant soldier during the war, and as my colleague was then valiantly at home catching mountain minnows and making that elaborate and wonderful "preparation" for the duties of statesmanship which is so graphically and modestly epitomized in the Congressional Directory, "the hour of our greatest danger" must have been "during the piping times of peace."

HON. G. B. RAUM, COMMISSIONER OF INTERNAL REVENUE, COMPLIMENTED BY AN ATTACK.

But, Mr. Chairman, not only have the halls of legislation, the Supreme Bench, and the circles of private life furnished their quota for malice and vilification, but one of the great Executive Departments has been formally and repeatedly arraigned at that bar, and its chief, General Green B. Raum, charged with high crimes and misdemeanors which if committed should and would bring his official head promptly to the block. Although controlling one of the most important Departments of the Government, although over a thousand millions of dollars and more have passed through his hands, yet for some cause, which if time is given me to-day I may unravel, he has fallen under the displeasure of this august power, to whom station, rank, and honors are but as the playthings of an hour. General Raum has been charged with the grave crime of bribery and corruption.

SCATTERING SHOTS FROM A POP-GUN.

Shall I enumerate others? Here in these pamphlet records of our "Kentucky statesman" I find charges not only against the present but the late Speaker of this House. Here, too, among the beneficiaries of his wrath I find Colonel R. M. Kelly, the present pension agent for Kentucky and the able and accomplished editor of the Louisville Commercial, the leading Republican daily of our State, who is called a "trimmer," whatever direful thing that may be. Colonel Kelly's offense lies in his failure upon all occasions to herald Hon. J. D. WHITE as the "leading Republican statesman of Kentucky." Here is Colonel William Cassius Goodloe, late minister to Belgium from the United States, a "sore-head," and although heretofore "a very prominent man in the State of Kentucky," yet as he "differs with him (WHITE) in politics" he must "hang his political harp upon the willows" and cease to hope. And here, too, is the "chairman of the Republican Congressional committee," (Mr. HUNBELL)—*et tu, Brute!*—who is told that "his threats to defeat my election will not disturb me." I wish I had the time and this were the occasion to analyze this statement. Can it be possible that aid was sent to my colleague in his last contest? If so, will he tell a suffering party how much it cost? Can it be possible that these "assessments" that are now being collected are now to be turned against our own men, and "WHITE" men at that? If so, then indeed ought we to do away with them and have at once some first-class "voluntary contributions."

HON. GEORGE M. ADAMS THE NEXT REPRESENTATIVE FROM THE TENTH DISTRICT OF KENTUCKY.

Hon. George M. Adams, ex-Clerk and ex-member of this House, although not on "speaking terms" with my colleague, is spoken to by him in this harangue from which I have been quoting. At the distance of 1,000 miles this politician hunter can fire a safe if not a bold and accurate shot. Can it be that the "coming event" in his Congressional district, the election of that tried statesman and generous-hearted gentleman [Colonel Adams] to the position formerly honored by him on this floor, and now temporarily held by the gentleman, is already "casting its shadow before?"

ANOTHER SAD RESULT OF CESAEREAN MEAT AND BAD DIGESTION.

But, sir, not these and others whom I could name of both parties and of "all ages, sexes, and conditions in life," but even ex-President Hayes is characterized in one of the gentleman's speeches as the "imbecile from Ohio." Thus the lowest to the highest in the land have supplied scalps to dangle at the belt of this brave warrior, this "big Injun" from the rocky cliffs of "old Kaintuck," known among his people by the suggestive title of "Heapee-Workee-with-the-Jaws."

THE COMBAT THICKENS AND WIDENS—COMMITTEES, CORPORATIONS, AND EVEN COMMONWEALTHS THREATENED AND DISMAYED.

Sir, no "pent-up Utica," no mere individualities or single objects confine the powers of my colleague's wrath. Committees, cities, bodies of men, parties—his own as well as others—and whole communities have been in turn besmirched upon this floor with his abusive denunciations. Need I remind you, sir, of his numerous attacks upon the leading committees of this House. What foundation

had he for the insinuation, or rather the direct charge, that the Ways and Means Committee of this House had been influenced by improper motives in passing the bill for the indefinite extension of the bonded period? What sufficient foundation had he for the charge so glibly made that "in the city of Lexington," the second city of his State, and, as he knows, one of the most refined and cultivated cities in the world, a little Athens, forever immortalized as the home of the great Commoner of the West, our peerless Henry Clay—why should he charge that "at the August election last year the most unscrupulous, the most unjustifiable, the most damnable"—how these epithets roll like glittering beads from a broken string—"system of bulldozing that has ever been attempted in any part of this Union was attempted in that city." Now, is there a gentleman here who recognizes in this strained and highflown rhetoric even the semblance to truth? That there were some disturbances is, I doubt not, true, as it was true in Boston, in Philadelphia, or in the quietest and most orderly little "village of the plain." But no such "blood and thunder" scenes as these ever did or ever will, I undertake to say, occur as long as it remains what it now is, the seat of the arts and sciences, the home of literature and religion.

IS HON. J. D. WHITE A REPRESENTATIVE OF KENTUCKY?

Not content with the glory he had achieved by assailing the fair name of one city in his State, my colleague seemed to have attained the climax of his desires and possibilities as a defamer when a few weeks subsequently an opportunity presented itself, or rather when he was able to force an opportunity, to attack the honor and integrity of the whole State. It is well known, and the gentleman will not plead ignorance of the fact, that Kentucky has never repudiated or scaled her debt to the extent of a single mill. When, therefore, the honorable gentleman from Virginia, [Mr. PAUL,] in vindicating the action of his own State by comparing it with the other States of the Union, declared upon this floor that Kentucky was also a repudiating State, what was my colleague's reply? Did he, as one of her chosen Representatives indignantly deny the allegation of his Readjuster friend as to Kentucky? Did he stand here defending the honor and guarding the sacred interests of the proud old Commonwealth whose commission he bears? On the contrary, he forced himself into the debate, not to hurl back the slander but to fasten it deeper upon her, insisting, although repeatedly called to order, that his State had repudiated her debt and dishonored herself as charged by the gentleman from Virginia. And when pressed to say in what way, he alleged that several counties had refused to pay their railroad bonds and were litigating their liability in the courts. I was not surprised that one of his party friends, [Mr. CAMP,] when he heard this, promptly exclaimed: "O, that is not repudiation!"

Well may Kentucky bow her head in shame and indignation when one of her own Representatives (?) holds her up before the whole American people as an object of scorn, distrust, and contempt.

The CHAIRMAN. The time of the gentleman has expired. Debate has been exhausted upon the pending amendment.

Mr. McMILLIN. I withdraw the amendment.

Mr. VALENTINE. I object.

The CHAIRMAN. Any gentleman has the right to object to the withdrawal of an amendment.

Mr. WILLIS. I ask to be permitted to go on for a few minutes longer.

The CHAIRMAN. Is there objection to the gentleman from Kentucky proceeding?

Objection was made.

Mr. BROWNE. I understand objection has been made to the gentleman proceeding.

The CHAIRMAN. The gentleman from Kentucky has concluded his remarks.

Mr. WILLIS. No, sir; he has scarcely begun them.

Mr. BROWNE. I am compelled to object.

Mr. WILLIS. I ask this House, having been attacked in my absence, having the right under the rule to rise to a question of privilege, which I did not exercise after consultation with the Speaker of the House, and having now been permitted to begin what I intended to say—I ask in common fairness that I shall not be cut off in this abrupt way.

The CHAIRMAN. The gentleman has had fifteen minutes. If he desires to make a request that the Committee of the Whole extend his time, the Chair will submit it.

Mr. HISCOCK. With all deference to the gentleman from Kentucky, and intending to be entirely courteous, I wish him to indicate what time he wants.

Mr. WILLIS. I shall be satisfied if I get ten minutes. I have some things to state here which I could not, under the rules, print.

Mr. BROWNE. I have listened patiently and with pleasure to the gentleman's explanation of the charge which seems to have been made against him by his colleague. Having finished that explanation he now proceeds to attack his colleague, which, as a matter of course, calls for a reply and a personal explanation by the gentleman from Kentucky, [Mr. WHITE.] Now, I say to the gentleman, and I say to all kindly and frankly, I am tired of this business. [Applause.] We have had these matinees every day for a week, and I object to turning the Congress of the United States into a bear-garden, if the gentleman will allow me the expression.

Mr. WILLIS. The gentleman ought to have been here yesterday when his cub had the floor.

Mr. BROWNE. I shall make the same objection to one gentleman proceeding in this kind of remark as I would to another.

The CHAIRMAN. Objection is made to the gentleman proceeding. The Chair will remark to the gentleman from Kentucky, if he has a question of privilege to present, that is to be heard in the House and not in committee. The committee has yielded by unanimous consent fifteen minutes to the gentleman; but objection is now made to his proceeding further.

Mr. WILLIS. I ask for ten minutes more.

Mr. THOMPSON, of Kentucky. I rise to renew the amendment.

The CHAIRMAN. The amendment is pending.

Mr. THOMPSON, of Kentucky. I ask a vote on it. What is the amendment?

The CHAIRMAN. The *pro forma* amendment is to strike out the last word.

Mr. McMILLIN. I was the party, I believe, who offered the amendment, and I withdraw it.

The CHAIRMAN. Objection has been made to its withdrawal, and the objection being insisted on it must be put to a vote.

The question being taken, the *pro forma* amendment was not agreed to.

Mr. THOMPSON, of Kentucky. I move to amend the paragraph by striking out the last two words, and I yield my time to my colleague, [Mr. WILLIS.]

Mr. CANNON. I rise to a question of order.

The CHAIRMAN. The gentleman will state it.

Mr. CANNON. In stating the question of order I wish to say, if this discussion is to continue I want it to be by unanimous consent, and that that unanimous consent shall extend also to the other gentleman from Kentucky, [Mr. WHITE.] My question of order is, that no member can speak twice here to an amendment until all others have spoken. The rule contemplates a five-minute debate, and it cannot be evaded so as to allow a speech to run for an hour or two hours or six hours by gentlemen being recognized and yielding to one gentleman so that he can continue the discussion beyond the time provided by the rule. I make the point of order that it is not competent for the gentleman from Kentucky [Mr. THOMPSON] to yield the five minutes to his colleague, [Mr. WILLIS,] who has already occupied fifteen minutes.

The CHAIRMAN. But this is a different amendment. It is to strike out the last two words.

Mr. BROWNE. I notify the gentleman from Kentucky [Mr. WILLIS] that unless he speaks to the amendment I shall rise to the question of order.

Mr. TOWNSEND, of Ohio. I desire to make a parliamentary inquiry.

The CHAIRMAN. The gentleman will state it.

Mr. TOWNSEND, of Ohio. What question is now pending before the committee?

The CHAIRMAN. The proposition to strike out the last two words of the pending paragraph.

Mr. TOWNSEND, of Ohio. I had the idea that a personal explanation was going on.

The CHAIRMAN. On that amendment the Chair recognized the gentleman from Kentucky, [Mr. THOMPSON.] That gentleman yields to his colleague, [Mr. WILLIS,] and objection is made under the rule to discussing other things than the amendment.

Mr. THOMPSON, of Kentucky. Let my colleague discuss it in his own way.

Mr. WILLIS. I ask that the words proposed to be stricken out may be read, so that I may discuss them.

The Clerk read as follows:

Strike out these words: "thousand dollars."

Mr. WILLIS. I will address myself to that amendment. I regret very much indeed, Mr. Chairman, to be compelled by indirection or by direction to trespass upon an impatient committee. When interrupted I was commenting upon the official acts of my colleague during the present session. I was calling attention—

Mr. BROWNE. I rise to a point of order.

The CHAIRMAN. The gentleman will state it.

Mr. BROWNE. First, I insist that the gentleman has no right to rise to a personal explanation in the Committee of the Whole.

Secondly, if he has risen to discuss the amendment he must confine himself to the amendment. I do this with entire kindness to the gentleman; I will make the same objection to anybody else.

Mr. ATHERTON. You did not do it yesterday when a much worse case arose.

Mr. BROWNE. And I did not do it when the gentleman from Kentucky opened the ball two or three days ago.

Mr. WILLIS. I did not open any ball; nor do I want to dance at anybody else's ball.

The CHAIRMAN. The question is upon the point of order.

Mr. THOMPSON, of Kentucky. I do not see how the gentleman from Indiana [Mr. BROWNE] can rise at the present point and endeavor to hamper the gentleman from Kentucky [Mr. WILLIS] in the remarks he is going to make. He cannot tell what connection there is between what the gentleman is going to say and the pending amendment until he has said it. He has not yet expressed a single

idea on the amendment which is to strike out the two words "thousand dollars."

Mr. WILLIS. I am coming to that gradually.

Mr. THOMPSON, of Kentucky. He had merely reached the point of saying that there was some connection between that amendment and what he intended to say and had said, when the gentleman from Indiana [Mr. BROWNE] interrupted him. Now, I insist that when a gentleman rises here to discuss an amendment, there is no man in this House, chairman or member—

Mr. HISCOCK. I wish—

Mr. THOMPSON, of Kentucky. I do not yield.

Mr. HISCOCK. I desire to make a suggestion.

Mr. THOMPSON, of Kentucky. I do not yield.

Mr. HISCOCK. The gentleman will allow me to make a suggestion.

Mr. THOMPSON, of Kentucky. Well, I will yield for a suggestion.

Mr. HISCOCK. I understand that the gentleman from Kentucky [Mr. WILLIS] is entirely willing to be limited to ten minutes—

Mr. WILLIS. I am.

Mr. HISCOCK. And I ask the committee to give him that time.

The CHAIRMAN. The Chair will submit the suggestion to the committee.

Mr. THOMPSON, of Kentucky. With the understanding that our colleague [Mr. WHITE] has the same time to be heard.

Mr. BROWNE. I object, and insist upon my point of order.

The CHAIRMAN. The question is upon the point of order raised by the gentleman from Indiana, [Mr. BROWNE.] The Chair desires to call attention to the first paragraph of Rule XIV, which says:

When any member desires to speak or deliver any matter to the House he shall rise, " " " and on being recognized may address the House, " " " and shall confine himself to the question under debate, avoiding personalities.

The Chair calls the attention of the gentleman from Kentucky [Mr. WILLIS] to that rule, the application of which is insisted upon. Under that rule the gentleman has a right to speak for the remainder of his five minutes to the pending amendment, which is to strike out the last two words.

Mr. TOWNSEND, of Illinois. Was not that rule applicable yesterday to the gentleman from Ohio, [Mr. BUTTERWORTH?]

The CHAIRMAN. The Chair desires to say to the gentleman from Illinois [Mr. TOWNSEND] that the remarks of the gentleman from Ohio [Mr. BUTTERWORTH] were made in general debate, before the five-minute rule applied. The question now is under debate under the five-minute rule; and the gentleman from Kentucky [Mr. WILLIS] is recognized for the remainder of his five minutes to speak to "the question under debate."

Mr. WILLIS. I was speaking upon one branch of the pending amendment, and I will speak upon that mostly, the proposition to "strike out." Now, since the gentleman from Kentucky [Mr. WHITE] has been upon this floor, who has he been "striking out" at? The very first man, as I have shown, that he "struck" at was a gallant Federal soldier, the district attorney of my own district, Colonel Gabriel C. Wharton.

Mr. BROWNE. Now, Mr. Chairman—

Mr. WILLIS. I am on this "striking out" part; the gentleman certainly cannot make a point on that.

Mr. BROWNE. I appeal to the gentleman from Kentucky himself if he does not know that he is not discussing the pending amendment; if he does not know that? I ask if it is not due to members and to the Chair in perfect good faith to enforce the rules. I have no feeling in this matter; I simply desire—

The CHAIRMAN. The gentleman from Kentucky will proceed in order.

Mr. WILLIS. I say I was discussing this term "strike out." I say the gentleman from Kentucky [Mr. WHITE] "struck" at that gallant soldier—

Mr. BROWNE. I ask the Chair to rule whether or not the gentleman is now proceeding in order?

Mr. WILLIS. I believe I have the floor.

The CHAIRMAN. The Chair rules that the remarks last made by the gentleman from Kentucky are not upon the "question under debate, avoiding personality." If gentlemen insist upon it, the Chair will be compelled to so rule. And further than that, the five minutes' time of the gentleman has expired.

Mr. WILLIS. I am sure the Chair will not rule that the five minutes have expired in my time.

Mr. BROWNE. The only question is whether the gentleman from Kentucky or the rules of this House shall prevail.

Mr. WILLIS. There is no such question involved here. I have some remarks which under the rule I cannot print, and which I am compelled to deliver—

The CHAIRMAN. Does the gentleman ask leave to print the remainder of his remarks?

Mr. WILLIS. I have in my hand letters and documents regarding Federal appointments in Kentucky that affect the personal as well as the political character of the gentleman, and which are pertinent to the issue I am discussing. I did not intend to ask leave to print them—

The CHAIRMAN. The Chair must remark to the gentleman from Kentucky—

Mr. WHITE. I ask that he be permitted to print.

The CHAIRMAN. The gentleman will be in order. The Chair has

a right to state the situation of this debate and to settle the point of order. The Chair has felt it his duty to exercise great liberality in the conduct of the debate in Committee of the Whole when objection was not made; and he thinks that the allowance of twenty minutes for this discussion is extremely liberal. The question being now made, the Chair asks the gentleman from Kentucky to co-operate with him in the proper enforcement of the rules when a point of order is made.

Mr. WILLIS. I will not assume to hold the floor under the circumstances. I am exceedingly obliged to the Committee of the Whole for the courtesy of permitting me to speak, as I know it was not strictly in order at this time. I ask now that I may be permitted, whether in accordance with the rules or not, (and I say it frankly,) to print certain additional remarks which I desire to make in this connection.

The CHAIRMAN. The Chair will put that question. The gentleman from Kentucky asks leave to print the remainder of his remarks. Mr. HARRIS, of Massachusetts, and others objected.

The CHAIRMAN. The question is now on the amendment to strike out the last two words.

Mr. THOMPSON, of Kentucky. I withdraw the *pro forma* amendment.

Claims of Loyal Citizens.

SPEECH

OF

HON. ANDREW G. CHAPMAN,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, August 2, 1882,

On the bill (H. R. No. 5899) to authorize the accounting officers of the Treasury to consider and pass upon certain claims now pending before them.

Mr. CHAPMAN said:

Mr. SPEAKER: The claims which this bill proposes to authorize the accounting officers of the Treasury to consider and pass upon are the few remaining cases on file in the Treasury Department growing out of the use and occupation of the real estate of loyal citizens, situated in loyal States, by the Government or its forces, where there was no express contract to pay rent, or for engineer stores belonging to such citizens taken and used by the Government. In 1817, March 3, (Revised Statutes, 236,) Congress passed this law:

All claims and demands whatever, by the United States or against them, and all accounts whatever in which the United States are concerned, either as debtors or as creditors, shall be settled and adjusted in the Department of the Treasury.

While all authorities, Attorney-Generals and others, have declared that this law conferred no jurisdiction over claims for damages actual, unliquidated, or resultant, yet none have said it did not cover cases arising under implied contracts, and the accounting officers of the Treasury have uniformly exercised jurisdiction under it in cases under implied contract.

We have from the Third Auditor of the Treasury, in a communication accompanying the report on this bill, these words:

For many years the accounting officers have held that such powers existed, and in many cases have exercised it.

And a list of such cases, comprising only a portion of those in which such action has been taken since the war, is appended to the report accompanying this bill.

We are told in the official communication of the Third Auditor before referred to that for "six successive years Congress has expressly recognized such claims as within the province of the accounting officers to adjust."

Every year since the passage of the act of June 20, 1874, the Secretary of the Treasury has reported to Congress allowances of claims for barracks and quarters, in all of which reports many of the claims were based on implied contracts to pay by the Government, and in each of the six years Congress has appropriated the money to pay such allowances, "nor was it ever before suggested in Congress that the accounting officers had transcended their jurisdiction in entertaining, allowing, and reporting such claims." And it was not till the present session of Congress that we hear of any doubts expressed as to the power of the accounting officers to audit claims based on an implied contract to pay, after large sums of money have been paid by the Government in settlement of just such claims on the findings of the accounting officers.

But we learn from Comptroller Upton, in an official communication dated December 22, 1881, and addressed to Hon. G. G. VEST, a member of the present Congress, that—

There has been much conflict of opinion as to the power and authority of the accounting officers to audit claims of this kind, but during several years past it has been held that the Auditor and Comptroller are not authorized to approve a claim for the use and occupation of real estate in any case except where rent has become due by the terms of an express contract.

From this official communication we have the first information of any doubts or difficulties existing in the minds of the Comptroller or Assistant Secretary of the Treasury, and the whole subject is carefully reviewed by the Third Auditor of the Treasury in the claim of James H. Elgin, in which rent for the occupation of his land by the Government troops for several years is allowed, and so certified to the Second Comptroller October 14, 1880.

The reasoning of Comptroller Upton is about this: that as Congress thought it was necessary to enact laws conferring jurisdiction over special classes of cases, such as is conferred by sections 273 and 277 of the Revised Statutes, and sections 300 A and 300 B, act of July 4, 1864, relating to quartermasters' stores and commissary stores, then it was also necessary for Congress to enact laws conferring jurisdiction in these two special classes of cases, namely, claims for rent under implied contracts and claims for engineer stores.

Were this a new question, it might become us to test the force of this reasoning; but we learn from the communication of the Third Auditor accompanying the report on this bill that—

The accounting officers have uniformly held that where the United States have occupied the real estate of a citizen in a loyal State, without claim of title or right to confiscate, and under circumstances where an intention to make compensation ought to be presumed, an implied contract to pay a fair rent grows up. This doctrine has been maintained in an unbroken line of decisions reaching back to the beginning of the late war.

IMPLIED CONTRACT.

The Court of Claims (Johnson's case, 4 Court of Claims par. 250,) recognizes in strongest terms that it makes no difference whether the contract is express or implied, "that the rights of the citizen, the duties and obligations of the Government, and the jurisdiction of the tribunal," are all the same whether the contract be expressed or implied; "that when the Government has entered upon the realty of a citizen or his right of property being established, the Government should be deemed to have entered under an implied lease."

Under that authority, how can you doubt the power and duty of the accounting officers to entertain such claims of loyal citizens in loyal States? Congress declared by law February 21, 1867, expressly that no claim for occupation of real estate in the disloyal States should be entertained or settled.

Is not this an implied recognition of the duty and authority to settle such claims in loyal States? If not, where the necessity of the law? Is there anything in the nature of the use of real estate to make it different from the use of any other sort of private property? Do you mean to plead the statute of frauds on claimants and require all contracts for rent of land for over one year to be in writing? The court in the case before quoted lays down the rule "that the occupation of the real estate of a citizen for public purposes creates the relation of landlord and tenant under an implied lease," upon which rests the right and duty of the Government to pay rent, as the just compensation prescribed by the Constitution; and without some such limit there is no private property, but we are all only tenants at the sufferance of the Government. We learn further also from the Third Auditor of the Treasury:

The number of cases now pending in which the question might arise can safely be said cannot number more than a very few hundred, and the number of rent claims which have been allowed by the accounting officers where the possession of the real estate was not held under express contract have been very numerous. The accounting officers have never yet held that express contract was a necessary element to allowance.

Moreover from the Comptroller we learn that while he entertains doubts as to the jurisdiction of the accounting officers over these two classes of cases, yet the equities recommending them for consideration are equally as strong as of those more clearly in his opinion within the law. And he forcibly remarks that "while holding that these claims for engineer stores are not within the jurisdiction of the accounting officers" he is aware of the apparent inconsistency of making the question of pay depend upon the use to which the property is devoted, when either of two purposes may have been equally beneficial to the Government.

The same officer may have been acting as engineer and as quartermaster at the same time, and quantity of timber may have been seized by his orders and used, in part, for purposes of fortifications and in other part as quartermasters' stores.

The latter can be audited and allowed, while the former under his construction cannot be paid for. He thus concedes if the claims are proven they ought to be paid. I say were this a new question we might stop to consider the propriety of this legislation; but when a law has received a settled construction during a series of years, both by the legislative and executive departments, and the business arising under it has been nearly all disposed of, it would not be proper to disregard the settled practice under the law in disposing of the remnant of the business even if that construction were wrong. The whole amount of the claims now pending, in the language of the report, do not probably exceed \$100,000.

By the long practice of the accounting officers, sanctioned by Congress, claimants have been invited to present their claims to this tribunal and file their proofs. It would certainly be wrong to dismiss these claims at this late day upon the suggestion for the first time that the accounting officers have not jurisdiction. Quoting again from the Third Auditor, he says:

The claimants should have a remedy, and doubts having been raised as to the power of the accounting officers in the premises, the proposed legislation appears to be wise and just.

Refuse this proposed legislation and you shut the door of justice in the very face of your own citizens. It is now too late for them to go elsewhere—they are met by the bar of limitations in any other tribunal. Turn a deaf ear to these honest claimants, the whole of whose claims would not absorb one-tenth part of the income of this Government for one single day, and you leave them entirely without remedy. If your accounting officers have been found faithful in adjudicating many of this class of claims, may they not be safely trusted to dispose of the few that remain?

By your invitation, conveyed in the very language of your law and the settled practice of your Treasury Department for years and years, sanctioned and confirmed without question by your annual bills of appropriation, your claimants, relying upon the justice of their Government, have filed their claims and proofs and patiently abided their time. A million of money, perhaps more, has been paid out in settlement of just such claims upon the adjudication of your Treasury Department. A few hundred more remain—aggregating in all not one-tenth part your daily revenue. Refuse to pass this bill and you will have this grand, magnificent Government, that can well afford to be not only just but liberal, saying to its overconfiding and overcredulous citizens, "We have misled you it is true; it is no fault of yours that you have confided in the very language of the law and the settled practice of the Government for years; but lest one fraudulent claim might possibly be paid, we will close the door of justice in your very face."

It is too late now for you to go elsewhere with your claims and your proofs. You cannot go to the Court of Claims, for we only allowed you six years from the origin of your claim to bring it in that court, (Revised Statutes, 1069,) and this grand Government, receiving upward of \$1,000,000 per day, will make by this highway robbery the pitiful sum of \$100,000. Can we, Mr. Speaker, afford to make it at that cost? We have high and holy authority for believing that ninety-nine guilty men should escape punishment rather than one innocent shall suffer. On a similar principle had you not better pay one fraudulent claim than deny justice to ninety-nine honest ones?

Mr. Speaker, in the trying hours of the bloody war through which we have but lately passed the Government passed laws establishing ready tribunals for the settlement of the claims of her loyal citizens for property taken for its armies, and even sent its own agents out to get up the proofs when there was an allegation of taking. Is she less sensitive now to the appeals of her citizens? Does she feel that the danger is passed, that the knife of the assassin is no longer at her throat, the torch of the incendiary no longer at her temple, and she can be bold and disregard the favor or the frowns of her citizens? The danger may be past, but the only safe foundation of this Government is in the love and the gratitude of its people. We are told—

The devil was sick, the devil a monk would be;
The devil was well, the devil a monk was he.

Let us not, I pray you, play that satanic part. Mr. Speaker, the Queen of England, in all her majesty, in all her might and power, can do no wrong. Sir, this mighty Government, with all its charter of almost boundless right and privilege freely accorded to it by the confiding hearts of a grateful and trusting people, has no more right than the majesty of England to wrong its humblest citizen, nor could it afford so to do if there were millions instead of a few thousand at stake. Let us pass this simple bill, most carefully guarded as it is in its terms, and do this little act of plainest and purest justice, not begrudgingly and sparingly, but cheerfully and freely, as becometh the representatives of a free and mighty people.

Naval Appropriations.

SPEECH

OF

HON. WILLIAM S. SHALLENBERGER,

OF PENNSYLVANIA.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 28, 1882.

The House in Committee of the Whole on the state of the Union having under consideration the bill (H. R. No. 6616) making appropriations for the naval service for the fiscal year ending June 30, 1883, and for other purposes—

Mr. SHALLENBERGER said:

Mr. CHAIRMAN: I had not intended to say anything on this bill to-night, but as there seems to be some time not desired by others I will occupy it lest I may not have an opportunity to-morrow.

I think I see in this bill some very objectionable features which have not been specially referred to this afternoon, and to which I feel it my duty to call the attention of the committee. I shall not refer to the legislation proposed which affects the navy-yards and upon which so much has been said by gentlemen who have preceded me, as I have no special interest in these provisions of the bill and have given no particular attention to them. I wish first to call the at-

tention of the committee to what I regard a very questionable change of existing laws regulating the course of instruction and the manner of appointments at the engineer school of the Naval Academy; and also wish to protest very earnestly against the radical reduction the bill proposes in the corps of engineer officers.

First, as to the change touching appointments and instructions. As is well known by most of the gentlemen around me, we have now what is universally regarded an admirable school of mechanical and marine engineering, which has stood the test of experience for the past sixteen years and has graduated with high honors some of the most talented young men to be found in the naval service of any government. The honorable gentleman in charge of this bill [Mr. ROBESON] assures me of his very high appreciation of the engineer corps of the Navy. No one upon this floor, I think, will suspect that he has any other motive than the best interests of the entire service to actuate him in suggesting the radical changes proposed by this bill. He has large experience also in dealing with these questions; and yet I must say, having given some little attention to this subject, that, as I understand it, this bill will very seriously imperil all that is of special merit in the present school of steam-engineering at Annapolis. Indeed I had almost said that it goes to the extent of abolishing one of the finest schools of its character in the world.

It is the one school under Government patronage to which admission is absolutely free to all, irrespective of political or pecuniary interests and upon competitive examination alone. A higher grade of students is thus unquestionably obtained, because maximum rather than minimum scholarship and qualifications are the basis of admission. However large the number of those applying for examination from all sections of the country, including usually several graduates of private technical schools, an average perhaps of one hundred and twenty-five or more each year, only twenty-five under existing law can be appointed, and they must show the highest average on rigid examination. The applications usually come from bright, ambitious young men who cannot secure political influence for an appointment as cadet-midshipman for various reasons. The standard is necessarily placed very high, as there is no difficulty in securing very bright candidates, and no limit to the qualifications, experience, and education of the applicants.

As a matter of fact the class which enters as cadet-engineers is of a higher grade of scholarship than the midshipmen who enter by Congressional appointment and who are required to reach simply the minimum standard. The instruction of the cadet-engineers for the first two years is the same as cadet-midshipmen; but the last two years are devoted exclusively to steam-engineering, the higher mathematics, iron-ship building, &c. The four years' course is a very exacting one for the cadet-engineers. It could not include more work, and were it to include any part of the course now pursued by the midshipmen during the last two years, something must necessarily be sacrificed of the present instruction, which specially fits them for the duties they expect to perform. Hence I cannot possibly see how a change can be made which will produce greater efficiency in the corps without increasing the number of years spent at the academy.

This bill proposes to merge in one the courses of instruction pursued by the midshipmen and the cadet-engineers. It proposes to abolish both the cadet-engineers and the cadet-midshipmen as distinct classes, and to enter hereafter but one class, to be called naval cadets, all to be appointed, as now provided by law, on recommendation of members of Congress. This effectually bars the door to many of the brightest young men of the country who may develop special genius for mechanical engineering but cannot obtain political influence. I regret therefore to see this competitive system which we have been so successfully testing entirely destroyed. The time has come, I think, when we might with advantage adopt it for all appointments, both at the academy at West Point and at Annapolis, under proper conditions.

I have long thought of suggesting a plan by which the present number admitted to both schools could be largely reduced by selection after competitive examination. I have thought that each Congressional district might have the privilege of nominating through its members of Congress or otherwise one cadet each year, who should be examined with the understanding that but one in four or one in six or one in eight from the number to which each State is thus entitled should be admitted, and they such as stand the highest and best examination. Where less than four or six Congressional districts are found in a State it might be arranged so as to admit one every second, third, or fourth year. The number of cadet-engineers to be admitted now is twenty-five each year. It could readily be reduced to twenty or less if the corps is too large.

I see no reason why a fixed and limited number of cadet-midshipmen or of West Point cadets might not be admitted each year out of a large number examined upon a system somewhat similar. I feel confident that if some such plan could be adopted, modified perhaps so as to confine competition within State limits, the rights of each State and of each Congressional district could be secured by permitting the nominations I have referred to, subject to the competitive examination, which would incite each Congressional district to put forward its best young man. Instead, therefore, of breaking up the present method of admitting cadet-engineers I desire to retain it and to extend the system, when practical, to all cadets. The proposition is to give the naval cadets proposed by this bill a uniform course of

instruction, so that after graduation, indeed after the two years' course at sea shall have been completed, they shall not know to which branch of the service they may be assigned, and certainly not be specially prepared for any particular branch of the service. They may be detailed as line officers, as engineers, as paymasters, as naval constructors; indeed, called to fill any staff position to which the academic board may assign them.

Now, it occurs to me as utterly impracticable without a special course of thorough training to fit all cadets equally well for all these positions, and very unwise to consume valuable time in studies which cannot secure proficiency in the service to which they shall be severally called. If it be said that some special instruction will at a subsequent time be given the cadets who may be assigned to the engineer corps, then the same distinction which now exists will be preserved, without the advantages at present arising from the fact that cadet-engineers are fitted for their profession in a large degree when they enter, because they know the future which awaits them.

These points are clearly brought out in the printed letter addressed to the gentleman from New Jersey by Hon. George S. Boutwell. It is not safe to risk, in my judgment, certainly not without the positive recommendation of the Secretary of the Navy and the engineer-in-chief, this radical change. The General of the Army, as I am informed, has recently said that this engineer school at Annapolis is the very best of its kind in the world. At the last examination out of six who are designated as "star graduates" five were cadet-engineers, and one of these received the highest marks ever given to any graduate at the academy. It cannot be suspected that this remarkable record on the part of the engineer corps is due to favoritism. While I think that the charge of favoritism will not lie against the academic board, I am free to suspect that all doubts upon that subject would resolve themselves in favor of the midshipmen.

The marked advantage possessed by the engineer corps is due, I think, to the system which selects for admission the best scholars in a very large number applying. To take proper charge of the intricate machinery, especially in vessels of war, requires constant watchfulness, thorough education, and much experience. To properly train young men to perform this work requires not weeks or months, but years. The time has passed for sailing men-of-war. While in times of peace canvas may be spread, yards and masts sent up and down as of old, the first sound of war would set aside such means of locomotion whose use in modern naval warfare would be ridiculous.

Our coming navy must be a steam-navy fitted with every modern mechanical appliance. Our future engineers must be taken from the most skillful young men of the land, and should have the most thorough technical education it is possible to give them. We cannot fall behind Great Britain in this respect when it is possible to excel her. We do not need a large army or a great naval establishment, but we do need, in my judgment, a very full complement of the very best officers, as a nucleus for volunteer forces in case of war—a skeleton army and a skeleton navy, which will necessarily involve a complement of officers apparently excessive. But as to the importance of highly-educated engineers, I quote from the London Times editorial, January 19, 1877, for which I am indebted to memorial of the corps of engineers addressed to Congress:

Every one who wants to be informed of the condition of the navy, and to obtain an opinion on the value of any proposed changes in the design and management of our ships, takes counsel of the engineers among the foremost; and if the admiralty and Parliament would get from the service itself the most trustworthy views of naval policy, they must consent to make the fullest recognition of the value and importance of the functions of the engineers.

In the same issue of the London Times, Sir Edward J. Reed, the great naval architect of England and for many years the designer of the principal iron-clads and other naval vessels of that country, and at present a member of Parliament, thus writes concerning the responsibilities of naval engineers and what should be their position:

Every war vessel is now a steamer, and some of our most powerful and valuable ships have not a sail upon them, but, on the contrary, are huge engines of war, animated and put into activity by steam, and steam alone. The main propelling engines are worked by steam; a separate steam-engine starts and stops them; steam ventilates the monster; steam weighs the anchor; steam steers her; steam pumps her out if she leaks; steam loads the gun; steam trains it; steam elevates or depresses it. The ship is a steam being, and the only man who understands it, can work it with safety, can control it efficiently, can use it, care for it, tend it, preserve it, repair it, renew it, is the engineer.

The necessity, therefore, exists not alone for a class of schooled and highly-educated officers, who shall be able to control the great power intrusted to them, but, it strikes me, the necessity is equally apparent of maintaining such number of officers as shall be fully equal to the increasing demands of the service. I therefore very seriously protest against the large reduction in the corps of engineer officers proposed by this bill. It is disproportionate to the reductions made in the line. As has been well said, "the Navy is top-heavy." The line officers are largely in excess of the number required to officer vessels at present in service or likely to be in service in the near future. But while it is true, as appears from the Naval Register, that the complement of line officers to each ship has very largely increased since 1864, when it might be supposed that our vessels were fully officered, it is equally true that the complement of engineer officers has remained substantially the same, and, in the judgment of the engineer-in-chief, the number is not greater at present than the service requires.

Hence, while I should not object to marked reductions in the number of officers of the line, I must protest against the proposed reduction to the number of one hundred in the corps of passed assistant and assistant engineers alone.

There are now allowed by law one hundred assistant and one hundred passed assistant engineers. If this bill should become a law the actual reduction of the number in the two grades would be sixty-three, as there are thirty-seven vacancies in the corps of assistant engineers to be filled by the promotion of graduated cadets now at sea completing their two years' sea service.

From the Naval Register of January 1, 1882, it will be seen that there are in the Navy seventy chief engineers, one hundred passed assistant engineers, and sixty-three assistant engineers—in all two hundred and thirty-three, and forty graduated cadet-engineers not yet promoted to assistants, making an entire force of two hundred and seventy-three. Of this number there are now at sea twenty-six chief engineers, fifty-three passed assistants, forty-two assistants, and forty cadet-engineers—in all one hundred and sixty-one. They are distributed among thirty-three regular naval steamers in commission five coast-surveying vessels, one arctic exploring vessel, and one Fish Commission vessel—in all forty, being an average of four engineers to each vessel, as will appear from the following table, which has been furnished me and which I incorporate with these remarks:

Name of ship.	Rate.	Chief engineers.	Passed assistant engineers.	Assistant engineers.	Cadet-engineers.

Chief engineers	26
Passed assistant engineers	53
Assistant engineers	42
Cadet-engineers	40

40 161

It is highly necessary when a ship is under steam that there should be a competent, experienced engineer always on watch in addition to the chief or other engineer in charge. It would readily be seen therefore that the number now at sea is not larger than it should be for the safe and efficient management of our vessels and for proper reliefs on watch. The number of engineers actually at sea is just one in excess of the whole number proposed to be allowed in the Navy by the pending bill. The number at sea is larger in proportion than can be shown by any other corps. But it is well known that officers cannot remain at sea continuously.

It is, and always has been, customary to allow an officer a term of shore duty after each cruise; so that while he spends one-half of his life at sea he has the other half, or nearly so, with his family on shore. A corps of one hundred and sixty engineers, therefore, as proposed by this bill, would allow but eighty at sea, half the present force, which, as I have shown, the demand for skilled engineers will certainly increase rather than diminish. With our prospects as a manufacturing and maritime people we need to foster all tech-

nical schools now existing, both public and private. To supply the complement of engineer officers required for each vessel; to supply the several navy-yards; the Naval Academy with instructors; members of experimental and other boards; officers for special duty, and besides be able to detail twenty-five engineers for duty in colleges throughout the country, as allowed by law, will tax the Bureau of Steam-Engineering to the utmost; and unless it can be shown that the proposed reduction is recommended by the engineer-in-chief of the Navy, who is the head of the bureau and who is most especially interested in maintaining its efficiency, I affirm that the proposition should not be countenanced by Congress. My information leads me to think, Mr. Chairman, that instead of recommending this proposed reduction a strong and earnest protest from the engineer-in-chief has been sent to Congress. From 1868 to 1880 there was in vogue in the Navy what was called the "machinist system." This system dispensed with the services of all but one or two engineer officers on each vessel, and gave the running of the engines into the hands of men who had a certain practical knowledge and were appointed for three years or the cruise, but who were in no wise responsible men. After a short and, as I am informed, unsatisfactory experience the Department, in 1880, returned to the system of having educated engineer officers stand watch. The cadet-engineer system has made it possible for this to be done by supplying a sufficient number to complete the detail for each vessel. In a few years the retirements in the engineer corps from age alone will almost equal the number of graduates. In twenty years from now every chief engineer and two-thirds of the past assistants at present on the active list will be retired on account of age.

There is, therefore, no immediate necessity, and no apparent future necessity, of reducing the corps in the manner proposed. Of graduates the number at present only averages from eighteen to twenty each year; but if the number admitted is too large reduce it, and thus gradually reduce the number of graduates, and from them select enough to fill vacancies. That will do no injustice to the large class of talented educated men now in the service, and who, if compelled to wait from five to ten or perhaps fifteen years for any promotion, as will be the case under this bill, will certainly leave the service and the Government will lose the skill and experience for which it has paid, and which we have shown that it needs.

While, as I have said, the officers of the line may safely be retired and number in present grades reduced, as they are largely in excess of the requirements of the service, I also think that the wisest course would be to very gradually reduce the force. Thus can we protect officers who have rendered gallant service to the country in the recent past. I trust the gentleman in charge of this bill will himself see the propriety of retaining the present force of engineer officers, or nearly so, and also of providing for some special course of instruction for officers assigned to the engineer corps in case the two classes are to be graduated as naval cadets.

There are other features of this bill to which I should like to call attention if I felt that I could take the time. The proposition to abolish the grade of commodore, and providing for the possible retirement of all of them as rear-admirals at an increased pay of \$500 a year in the event that they should feel grieved by the promotion over their heads of officers lower in rank as permitted by the bill is, to my mind, unnecessary and unwise. The power placed in the hands of a small board of admirals to confine promotions to a select few, most likely of their own personal friends, is a very dangerous provision, in my judgment, and to make a rear-admiral's commission the prize in a grand race open to all commodores and captains would prove a demoralizing feature I fear. I should prefer to rest the designation or selection in the hands of the President, if such a change from the present system of promotion by seniority is demanded.

In conclusion, Mr. Chairman, I will say that, as at present advised, I shall oppose a change of the method of appointment as well as of the course of instruction for the engineer officers at the academy. I shall oppose the radical reduction in the officers of the corps as proposed from 273 to 160, for which there is no valid plea of necessity, but, on the contrary, a protest from the Department. I oppose the increase of power given to the academic board and the creation of a small board of admirals in whom absolutely rests the power of confining appointments and promotions to a select circle of their friends. I wish to extend rather than abolish, as this bill does, the competitive system of admission to the military schools. I wish to tempt the brightest and best young men of the country to enter the Government service and to feel that they can do it if they have talent and pluck, irrespective of political, social, or pecuniary influences, by one open door at least, as now presented at Annapolis.

I trust that the bill will receive very careful consideration by members of the House, and will be glad if all legislation ingrafted upon this bill looking to a reorganization of the Navy can be eliminated from it and be reported at a future time by the Naval Committee. The practice of reporting important legislation upon an appropriation bill in the closing days of the session cannot, in my judgment, be commended, and if a resolute resistance were made to it we should probably be able to devise a system of rules which would give to the several important committees of the House other than Appropriations the opportunity to carefully mature, present, and pass all needful legislation on subjects over which they have jurisdiction.

Reduction of Internal-Revenue Taxation.

SPEECH

OF

HON. BENJAMIN WILSON,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 23, 1882.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. No. 5538) to reduce internal-revenue taxation—

Mr. WILSON said:

Mr. CHAIRMAN: I shall detain the committee but a short time, as I rose more for the purpose of giving notice of one or two amendments I desire to offer in connection with the pending bill than anything else. I am in favor of the general features of this bill with the amendments which I have suggested and shall, at the proper time, propose for the action of the committee. On yesterday I gave notice that I would move to strike out the clause which relates to the tax upon the capital of the national banks. I am not in favor of exempting their capital from taxation, and principally for the reason that they derive a profit not only from the earnings of the banks but also from the interest upon the Government bonds upon which their operations are based.

With all deference to the distinguished gentleman from Pennsylvania, [Mr. KELLEY,] I do not think the case he cites of the banker is analogous to that of the farmer. We impose no direct tax upon the farmer, and we have no right to do so under the circumstances. He has no special privileges from the Government such as have been accorded to the national banks. The banker's operations are based upon the bonds of the Government, and the interest upon them is paid to the banks. The farmer has nothing of the kind in his favor, and I shall move to strike out the provision relieving the capital of the national banks in the first section of this bill.

I am, as I said yesterday, in favor of removing the taxes from deposits in banks, because, as I believe, that tax imposes an unequal burden upon the borrower, that class of energetic men who carry on the active business industries of the country. It works a hardship upon the poorer classes. It does not come from the man of wealth. This tax constitutes a portion of the expenses of the banks. The depositor pays no part of that expense. The borrower pays the whole of it. Now, sir, take the case that arises in almost all banks. The man of wealth makes a deposit; his money is put in the vaults of the bank for his accommodation and for its safe-keeping. The bank is taxed by the Government on the deposits thus made. The bank has the tax to pay, and in turn it must be repaid by its customers, its borrowers, and not its depositors. The man of wealth borrows nothing; he does not need to borrow; he is a depositor; he pays nothing on his deposits, while the total expense of the banking operations is necessarily imposed upon the borrowing class.

I see the operation of this in my own section; in an agricultural, a manufacturing, and a mining country section. The borrower who carries on the industries of the country, men who have to raise money by loans from the banks, are compelled to pay such rates of interest as will enable the banks to meet all their expenditures, and this interest charge is regulated to some extent by the expenditures.

Mr. HOUSE. Will the gentleman allow me to ask him a question? Mr. WILSON. Certainly.

Mr. HOUSE. Does the gentleman believe that if the tax is taken off of deposits any bank in the United States will charge any less rate of interest?

Mr. WILSON. I do, sir.

Mr. HOUSE. Well, I do not.

Mr. WILSON. I am satisfied that it would be so.

Mr. HOUSE. The gentleman has greater faith than I have then.

Mr. WILSON. Why, Mr. Chairman, I am satisfied that I speak accurately when I state that it is the policy of the banks in my part of the country to reduce the rate of interest.

Now, you take the tax from deposits and check stamps and you will reduce the bank's expenses, and enable them to loan money at the rate of 6 per cent. interest, and I hope at a lower rate.

Before this bill shall be finally voted upon, I shall offer an amendment fixing the maximum rate of interest at 6 per cent. The banks are the creatures and Congress the creator; if Congress can create and tax or not tax, and supply its circulation, it can prescribe the rate of interest.

During the war we were compelled sometimes to pay 12 per cent., then 10 per cent., then down to 8 per cent., and now some of the banks loan at 6 per cent. Our business men, our agriculturists, and those engaged in mining and manufacturing are content to borrow at the rate of 6 per cent. interest. I now desire to have the following amendment read.

The Clerk read as follows:

And from and after the passage of this act no national banking association organized under the laws of the United States shall charge or receive any interest,

discount, or exchange exceeding the rate of 6 per cent. per annum for the loan of any money or in the purchase or discount of any note, bill, or other obligation; and any such banking association violating this provision shall forfeit the whole amount of interest, discount, or exchange so charged or received.

Mr. WILSON. I had occasion some time ago to examine the tax account of a national bank in my own town. Upon that examination I found the bank is charged with more than 3 per cent. taxation, national, State, county, and municipal.

If the Government continues to impose high taxation upon banks the result will be that the people must continue to pay high interest, and we cannot expect to be relieved in that regard until we in some way give proper relief.

Mr. Chairman, I desire to read the following letter as an expression of popular opinion upon this subject in the district which I have the honor to represent. It is signed by the distinguished Democratic governor of our State, and by other prominent, intelligent gentlemen of both political parties. Democrats and Republicans united in expressing the opinion that this bill should be passed:

WHEELING, WEST VIRGINIA, June 14, 1882.

SIR: The bill embodying the reduction of the tax on banks and bankers, and the abolition of the check stamp, seems to be laid aside and almost forgotten by Congress. The session is probably nearing its close, and this burden we have been suffering unjustly for years seems likely to remain unless our Representatives take some prompt action in the matter.

To one so well versed as yourself in all that pertains to the welfare of the country at large, and our State in particular, it would be useless to enumerate the advantages that would accrue from and the necessity that demands the repeal of these onerous duties.

Congress itself by refunding the Government debt at astonishingly low rates of interest has established the precedent for cheap money which now prevails among us, rendering the business of banking unprofitable. We would beg you to consider that this semi-annual duty on banks is virtually a tax on a large portion of your constituents. The removal of an oppressive tax on, say, fifteen hundred stockholders in this district could not fail to impress them with a sense of profound gratitude toward one who should apply his influence in this direction.

Allow us to ask that you urge this matter to a conclusion during this session of Congress.

And we remain, very respectfully,

BANK OF THE OHIO VALLEY,
By F. P. JEPSON, *Cashier*,

Hon. B. WILSON,
First District, West Virginia.

Now, Mr. Chairman, I desire to read the following letter from Colonel L. Haymond, the cashier of the national bank of my town:

CLARKSBURG, WEST VIRGINIA, January 9, 1882.

DEAR SIR: I submit for your information, as you request, the following statement in regard to the taxation, &c., of this bank for the year 1881:

Capital stock.....	\$100,000 00
Average deposits for 1881.....	111,570 67
Tax on deposits for 1881 to United States, $\frac{1}{2}$ per cent.....	557 84
Tax on circulation for 1881 to United States, 1 per cent.....	894 74
Tax, State, county, and corporation, for 1881.....	1,668 10
Total tax for 1881, (over 3 per cent.).....	3,120 68

Very respectfully,

L. HAYMOND, *Cashier*.

Hon. B. WILSON, Washington, D. C.

In the same connection, Mr. Chairman, I desire to read the following letter from J. E. Sands, cashier of a national bank in an adjoining county. He discusses the question so fully and intelligently that I am sure his letter will be listened to with interest:

FIRST NATIONAL BANK,
Fairmont, West Virginia, February 13, 1882.

DEAR SIR: You will pardon me if this letter is of any sort of trouble to you, but as you will soon have the question of rechartering these banks before you I will venture to write you. In the first place, it seems to me if they are to be rechartered the entire field of circulation, except gold and silver, should be given to them, and sundry amendments should be made to the law governing them. We have legal tenders, silver certificates, national bank notes, gold, and silver. Now, I say perfect the law, take off sundry taxes and restrictions, leave the field of paper circulation to the national banks and the gold and silver to the Government,

or else do away with the national banks and let the Government in some way outside furnish the circulation necessary. This system of banking is doomed unless Congress will take off the war taxes and give a better bond than a 3 per cent. You will find that capital now in them will gradually go out, except in places where large lines of deposits are to be had. Comparatively speaking, there is but little capital in them now when you compare it with the private banks and "State chartered" banks. If it is to be perpetuated, take off the taxes, the two-cent stamps, and other sores; give us a chance. National banks in most places now cannot do a legitimate business and make any money for their stockholders. We have to pay United States, State, county, and town tax; pay \$30 for examination, from \$75 to \$100 our share of expenses of redemption agency in Washington, express charges to and from said agency in Washington, making in all fully 3 per cent. upon our capital; then say 3 per cent. for expenses, and we are compelled to charge over 6 per cent. if you wish any dividend for your stockholders.

Then if they are to be rechartered there is one thing I do wish you would look after. I have before me two books of 1,600 pages, Decisions of Courts on National Bank Cases, most of them on the usury question, sections 5197, 5198.

The New York supreme court decides "that a party who pays more than legal interest can recover by action only twice the amount of the excess so charged." Other courts hold that if you charge more than legal rate the note never did and never could be made to carry any interest, and the party must recover twice the amount of all the interest he ever did pay. Others hold that it means only twice the amount of all the interest for two years. Now, how are we poor fellows to know, when all these wise men differ? Cannot you make this so plain that even the courts and lawyers cannot misinterpret? I begin to think if you can find anything else that will give us a good, sound currency we national banks may as well stand aside, unless your gentlemen in Congress will perfect the law making them.

I have the honor to be, yours truly,

J. E. SANDS.

Hon. BENJAMIN WILSON.

Mr. Chairman, I desire to call the attention of the House to the following extract taken from the Financial and Commercial Chronicle of New York, of date of June 24, 1882:

Take, for instance, as illustration, the effect excessive taxation alone has had in this city in curtailing banking facilities. Way back in 1857 the banking capital invested here was about \$65,000,000, and the exchanges through the clearing-house were eight and one-third billions. In 1881 the capital was only about sixty-two millions with exchanges forty-eight and one-half billions. That is a decrease of nearly 5 per cent. in capital and an increase of 500 per cent. in work to be done by it. Even that statement, however, does not fully illustrate the disparity between the work and the capital to do it with, because this city is now more than ever the center of the country's commerce and of its vastly increased activities.

I hope, Mr. Chairman, that the prediction of my distinguished friend from Georgia [Mr. STEPHENS] and of the gentleman from Iowa [Mr. KASSON] will soon be realized, and that the day is not far distant when the prosperous condition of the country will enable Congress, with due regard to the rights of all the people, to abolish the entire system of internal revenue. It is repugnant to our form of government, has ever been distasteful to American statesmen. When the demands of the country required increased revenues it was found necessary to resort to it.

The tax on matches everybody of course desires stricken off. And our State banks, which have no aid from interest on Government bonds, should be put on the same footing or have equal advantages as far as may be with national banks. With the payment of our national debt national banks must go out of existence.

When we reach the section of the bill relating to the tax upon tobacco and cigars I desire to offer further amendments, with a view of giving our people the relief to which they are entitled. As I said, Mr. Chairman, I am in favor of the general features of this bill. It does not, however, go far enough. It does not give to the people relief from the excessive taxation which Congress can with great propriety give at this time. The Committee on Ways and Means have closed the door upon us, I think, too soon; nevertheless I am prepared to act, and to act now, on the pending bill, and to amend it as far as the demands of the country require that it should be amended.

Election Contest—Bisbee vs. Finley.

SPEECH

OF

HON. BENTON McMILLIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 1, 1882.

The House having under consideration the Florida contested-election case—

Mr. McMILLIN said:

Mr. SPEAKER: I would have much preferred that the important duty of making the closing argument in this case should be assigned to some member of the committee having it in charge. But I feel that very much of the labor that would ordinarily devolve upon me in closing it has been removed by the exhaustive and conclusive arguments made both by the gentleman from Pennsylvania [Mr. BELTZ-HOOVER] and the gentleman from Texas, [Mr. JONES,] who have addressed the House. Every presumption of law is in favor of the regularity and legality of the commission under which Judge Finley holds his seat. All the officers who received and counted the votes, and who issued the commission are presumed to have done their whole duty. And he who asserts the contrary must prove it by unquestionable evidence.

The contestee, Mr. Finley, comes here with a majority of 1,150 votes, stated in round numbers. He comes without the imputation of the slightest wrong upon him throughout the whole case; nor has there been a suggestion from any one of the least impropriety on his part in connection with it. He has the satisfaction of knowing that in all the bitterness of party rancor and of the conflict that has characterized the House for the last few days there is not a word that challenges his integrity, impeaches the purity of his motives, or casts the slightest reproach upon him in any respect. For myself, I would rather hold that proud position this record gives him than a seat on this floor obtained by unlawful means and held by no stronger right than partisan favoritism.

Sir, as stated before, we come with the presumption of law all in favor of the sitting member. As old as Kent, as old as Blackstone, as old as Coke, as far back in the dim past as the common law points, stands out the principle of law that he who occupies a position under the forms of law is presumed to be rightfully there.

Sir, the most casual observer cannot fail to see at a mere glance the difficulties that have stood in the way of a fair and dispassionate consideration of the election cases that are pending in this Congress. From the very beginning this side of the House have had difficulties to encounter which have seldom been thrown in the way of a minority in any Congress. There are 291 members. The election committee consists of fifteen members, yet, notwithstanding the fact that nearly one-half of the members of Congress are Democrats the Speaker saw fit in the organization of the committees to put only four Democrats upon the Elections Committee. It is not difficult to see the amount of labor that would be thrown upon them, in the first instance, and the disadvantages under which they would be placed when they constitute only about one-fourth of the committee, and we take into consideration the fact that there were twenty-two contests begun.

We have had some strange spectacles in connection with these election cases. In one of them—in the Utah case, between Campbell and Cannon—there were 19,925 votes polled, of which Cannon received 18,508. The election was held on the day required by law. There is no charge of any irregularity in the election. Both candidates were at the time of the election eligible to the office sought, and yet the committee reported and the House gravely decided that neither is entitled to the seat. And hence that Territory must go unrepresented.

Eighteen thousand votes were lawfully cast and no man elected according to the committee! We come next to the South Carolina case of Mackey *vs.* O'Connor. There Mr. O'Connor, the man who had been elected and obtained the certificate, died. The evidence had been taken in the case before his death. After O'Connor's death the contestant, Mr. Mackey, got possession of the evidence. He altered it in various particulars, recopied it, interlined it, burned up the original, and brought this doctored and forged testimony into the House as the foundation for his right to a seat, and this eleven-by-four committee reported that he is entitled to the seat. The minority properly held that no such outrage ought to be perpetrated on forged testimony, and refused to allow it to be done. Then, in violation of the rules of the House, and overriding all precedents, the rules were amended in a manner never before resorted to, the case rushed through, and the member seated on such evidence. The principle that he who comes into a court asking equity must come with clean hands was disregarded. The principle of law which requires the suppression of evidence that has been forged or altered was ignored, turpitude triumphed—

Justice halts and right begins to fail.

Sir, I stand here to-day to advocate every element of freedom of elections—freedom from bulldozing, freedom from ballot-box stuffing, freedom from official threatenings, and freedom from the use of money for purposes of corrupting the polls. While every species of improper influence on the elector and around the polls is to be deprecated, I do not hesitate to state that it is my honest conviction that the most corrupting influence now at work to prostitute the elective franchise in this country is inaugurated in and emanates from Washington and from those who are high in authority here. We hear it occasionally going forth to every part of the country that the President and the administration favor this man or that man's election. We hear continually whisperings in the political air that all the influence of the Administration will be lent to the election of one candidate or to the defeat of another.

The founders of our institutions had grave apprehensions that the ballot-box might be corrupted, but I suppose that neither Washington, Jefferson, Adams, Clay, Jackson, nor any other of the early Presidents ever dreamed that from the White House, from the Cabinet, from the Halls or members of Congress, from the sources of authority at the capital of the Republic, would be issued a quasi-proclamation that a certain candidate must be elected and a certain other defeated. If those sage and patriotic statesmen, long since dead, could revisit us they would behold with sadness the degeneracy which makes their successors capable of such practices, and that makes the sons of patriots submit to them.

There is a plain express statute of the United States against the assessment of officials for campaign purposes, and yet, in violation of law, in violation of political morals, and for the purpose of cor-

rupting the ballot-box, these things are done at the very seat of the Government, by those who stand high in the counsels of the country. One hour they urge on the pack who have been brought from the kennel for the purpose of hounding down officials and taking their salaries; and the next, with grave countenances and Phari-saic phrases, they stand up and prate about "a free ballot and a fair count." They talk about "the shot-gun policy" and "tissue ballots" with the gravity of chaplains; when it is an undeniable fact that more corruption of elections is caused by the use of the money raised by forced contributions from Government officials than by all the shot-guns ever loaded and all the tissue ballots ever printed. It is time this "gnat-straining and camel-swallowing" should cease.

Mr. Speaker, that Representatives may see that the assessment of officers and employés of the Government by campaign committees is in violation of the spirit of the law, I read from the act of Congress approved August 15, 1876, section 6:

That all executive officers or employés of the United States not appointed by the President, with the advice and consent of the Senate, are prohibited from requesting, giving to, or receiving from any other officer or employé of the Government any money or property or other thing of value for political purposes; and any such officer or employé who shall offend against the provisions of this section shall be at once discharged from the service of the United States, and he shall also be deemed guilty of a misdemeanor, and on conviction thereof shall be fined in a sum not exceeding \$500.

Again, I read from section 1546 Revised Statutes of the United States, as follows:

No officer or employé of the Government shall require or request any working-man of any navy-yard to contribute or pay any money for political purposes, nor shall any workingman be removed or discharged for political opinion, and any officer or employé of the Government who shall offend against the provisions of this section shall be dismissed from the service of the United States.

Now, sir, with these laws in full force a committee of Congressmen from the other side of the Chamber has been organized to conduct the coming Congressional campaign. At the same time that they stand here clamoring about free and fair elections they are devising means by which the employés of the Government can be fleeced for campaign purposes; and every employé about this Capitol has received a notice that he is expected to make a contribution for campaign purposes, and the amount he is expected to give is specified in the notice, and is 2 per cent. of the salary he draws. We have a number of little pages employed in the hall who are so small that some of them are yet clad in knee-breeches. Upon their hard earnings widowed mothers or orphaned sisters depend for their daily bread. One would think that no set of Congressmen could be found so exacting as to take the bread from the mothers of these youngsters. Yet they have come within the range of the circulars of this committee. They have been notified that they are expected to contribute. It makes no difference whether the employé is tottering to the tomb or just escaping from the cradle, he is equally subject to the exactions of the committee. It makes no difference whether he is stout and able-bodied or whether in the service of the country he has lost an arm or a leg, he is expected to furnish his per cent. of salary drawn. I desire to insert here one of those love-letters from which the minutiae of the process, together with the names of the committee, can be seen:

[Jay A. Hubbell, chairman; D. B. Henderson, secretary; executive committee—Hon. W. B. Allison, Hon. Eugene Hale, Hon. Nelson W. Aldrich, Hon. Frank Hiscock, Hon. George M. Robeson, Hon. William McKinley, jr., Hon. George R. Davis, Hon. Horatio G. Fisher, Hon. Horace F. Page, Hon. W. H. Calkins, Hon. Thomas Ryan, Hon. Wm. D. Washburn, Hon. L. C. Houk, Hon. R. T. Van Horn, Hon. Orlando Hubbs.]

HEADQUARTERS OF THE
REPUBLICAN CONGRESSIONAL COMMITTEE, 1882,
520 THIRTEENTH STREET, NORTHWEST,
Washington, D. C., May 15, 1882.

SIR: This committee is organized for the protection of the interests of the Republican party in each of the Congressional districts of the Union. In order that it may prepare, print, and circulate suitable documents illustrating the issues which distinguish the Republican party from any other, and may meet all proper expenses incident to the campaign, the committee feels authorized to apply to all citizens whose principles or interests are involved in the struggle. Under the circumstances in which the country finds itself placed, the committee believes that you will esteem it both a privilege and a pleasure to make to its fund a contribution, which, it is hoped, may not be less than \$24. The committee is authorized to state that such voluntary contribution from persons employed in the service of the United States will not be objected to in any official quarter.

The labors of the committee will affect the result of the Presidential election in 1884 as well as the Congressional struggle; and it may therefore reasonably hope to have the sympathy and assistance of all who look with dread upon the possibility of the restoration of the Democratic party to the control of the Government.

Please make prompt and favorable response to this letter by bank check or draft, or postal money-order, payable to the order of JAY A. HUBBELL, acting treasurer, post-office lock-box 550, Washington, D. C.

By order of the committee.

D. B. HENDERSON, Secretary.

Sir, let us dissect this general order No. 1. You will observe that it is issued from "headquarters." It purports to call for a "voluntary contribution," and yet the contributor is notified the amount he is expected to "voluntarily contribute," and that amount is 2 per cent. of the unfortunate official's salary. Who ever heard of a beggar notifying the one from whom he begged how much he must give? Then this love letter goes on to tell the official victim that:

The labors of the committee will affect the result of the Presidential election of 1884 as well as the Congressional struggle, and it may therefore reasonably hope to have the sympathy and assistance of all who look with dread upon the possibility of the restoration of the Democratic party to the control of the Government.

Mr. Speaker, do you not suppose the patriotic pulse of a nine-year old page of this House beats with quickened "dread" when he, with the sapience of a full-fledged statesman, meditates "the possibility of the restoration of the Democratic party to the control of the Government?" Do you not admire the paternal anxiety of the "Republican Congressional Committee," as it gathers these pages together, "even as a hen gathereth her chickens under her wings," and starts its long fingers into their little pockets for 2 per cent. of the salary which would otherwise go to clothe mothers and feed sisters?

Again, sir, the victims are assured that "the committee is authorized to state such voluntary contributions from persons employed in the United States will not be objected to in any official quarter." If this is true it only proves that the scheme is deeply laid, and those high in authority sanction what is at least a violation of the spirit of the law.

The "order" ends by notifying them to "make prompt and favorable response."

Some of the employés of this Capitol lost one arm in battle, some one leg, one both arms, and one both legs. Still, so far as I have heard and believe, no exception has been made in their favor. They are on the roll of honorably discharged soldiers required by law to be kept. Yet their loss of limbs does not free them.

There cannot be any freedom of election when these practices are tolerated. To expect it is to expect to find pure water in the stream when the fountain is impure. The officer, without he has the manhood to resist and the means to resist, is no more free than the galley-slave who is chained to his oar. If these things are tolerated we will go on till the whole body politic becomes as Burke described the heart of Warren Hastings to be, "vitiated, corrupted, gangrened to the very core."

In old times, when things were called by their proper names, the robber placed his dagger at the traveler's breast and coolly said to him, "Your money or your life." But we live in the nineteenth century, when phraseology has been coined to suit the æsthetic taste of a venal age, and when it is fashionable to hide the horror of avarice and crime under smooth verbiage. So to-day we hear the not less reprehensible command given, "Your money or your office." How strong this appeal to a man whose children are to suffer when the salary of his office fails. What could be more potent to move a father than his own child's cry for bread? Is any method of controlling a man's vote more certain or more dastardly than this? It has the meanness of the shot-gun without its boldness.

Mr. Speaker, I shall not attempt to follow and answer one by one all the arguments made by gentlemen who have presented the case of the contestant, Mr. Bisbee. The report of the committee seeks to obliterate Mr. Finley's large majority and seat Mr. Bisbee by a majority of about 400 in an office to which he was never elected. It will be my purpose to attempt to show that more than 400—more than the majority claimed for Bisbee by the committee's report—cannot be legally counted for him or against Judge Finley. This done, the contestant must fail, whatever we do with the other counties and voting places not discussed minutely. A want of sufficient time to discuss the entire case forces me to this, and not the weakness of those parts of the case upon the discussion of which I do not enter.

Sir, Judge Finley comes duly accredited as a member of this Congress. He comes supported by all the presumptions of law.

The following is laid down in Brightley's Leading Cases on Elections:

What has been done by the sworn agents of the law is always to be presumed rightly done; and those who seek to impeach the acts of these functionaries must not expect to be entertained, if, instead of bringing positive, tangible, and direct charges, they content themselves with general, argumentative, and theoretic imputations. (McCrary, sec. 343.)

What kind of evidence is brought forward to set aside this strong presumption of law? There is a class of evidence here, Mr. Speaker, that I regret to have even to comment upon in that way which I feel it deserves. But more of this hereafter. This is no effort to get rid of an incumbent by establishing fraud or improper conduct at a single voting place or even in a single county, but so strongly has the sitting member been intrenched by the justice of his cause that we find those who oppose him have been compelled to attack all along the line; hence their difficulties. They have had to attempt to blot out his majority by piecemeal. And after all has been done against him that untiring energy, unscrupulous and ignorant witnesses, and party bitterness could do, he stands as unscathed by foes, when his case is justly tried, as are the pyramids of Egypt by the lapse of ages.

How do they begin this contest? The record shows, on pages 197, 198, that the contestant's forty days prescribed by the act of Congress expired on the 14th day of March, 1881; that the contestee's counsel then and there entered his protest against the flagrant and presumptuous violation by the contestant of the act of Congress contained in section 107 of the Revised Statutes. Now, was the law complied with? You members of Congress, you who stand here by the hour and abuse all who would tear down the laws, will you be the first to violate and disregard them? When the contestant himself comes to respond in his own right I want him to feel that to him is continually pointed the inquiry, Did you comply with the law yourself?

Now, what is that law contained in section 107 Revised Statutes?

In all contested-election cases the time allowed for taking testimony shall be ninety days.

And the testimony shall be taken in the following order:

The contestant shall take testimony during the first forty days, the returned member during the succeeding forty days, and the contestant may take testimony in rebuttal only during the remaining ten days of said period.

How? "During the first forty days." The returned member during the second forty days, and the contestant may take testimony in rebuttal only during the remaining ten days of that period. Has the law been complied with? Have you taken the testimony within the time allowed by the law? No, sir; and this case rests mainly upon evidence taken *ex parte* after the expiration of the forty days for taking testimony in chief, the majority of which testimony was taken in the absence of the contestee, Mr. Finley.

Sir, I say in presence of the members of the Committee on Elections, and it will not be denied, that if that committee had thrown out or disregarded all the evidence taken in open, flagrant violation of this law, they never could have figured Judge Finley's majority down or Mr. Bisbee's up. You have claimed that Florida voters disregarded the law, and have based the report against Judge Finley upon that pretense. Are you going to disregard it yourselves while clamoring against others for doing so? The evidence in a majority of the counties was thus taken in violation of every principle of law, and when Judge Finley was not present to cross-examine.

Is it right, is it manly for those who clamor for the administration of law to turn round and ride rough-shod over it? I insist that it is not. It will not be denied that if you take out all such evidence and the report that is based upon it this contestant goes to the wall.

Mr. Speaker, I have stated that the evidence in this case was in the main taken *ex parte* and taken after the forty days allowed for the taking of evidence in chief had expired; and in many cases it was taken in counties where no evidence in chief had been taken in the first instance. Here are the counties in which this occurred: Brevard, Bradford, Columbia, Hamilton, Putnam, Orange, Saint John, Suwannee, and Volusia. In all these counties, in violation of law, the contestant was permitted to take evidence in chief after the expiration of his forty days and without leave of the committee; and when the contestee came up and sought an opportunity to throw out this evidence, the suppression of the evidence which the law demanded was refused. Yet the gentleman from Massachusetts boasts of the fairness that has characterized the action of the committee in this case. It is the fairness that is always given to a man who has injustice done him—no greater fairness; for injustice has been done by the admission of evidence which under a proper construction of the law could not have been admitted.

In response to the gentleman's [Mr. RANNEY] plea of fairness I would ask, is it fair to violate the law? Is it fair to permit the contestant to take evidence in the absence of the contestee and in violation of law and use it to oust him from his seat? What kind of fairness is that? If that is the gentleman's ideal of fairness I do not in the least envy him his judgment on what constitutes equity or fair dealing.

Mr. Speaker, I trust the House will bear with me while I take up Alachua County and show the injustice done Judge Finley by the report of the committee. We will consider Arredonda poll first:

In 1880, the total vote returned from this poll for Presidential electors was 322, of which 172 were returned for the Democratic electors, and 150 for the Republican electors; for Representative in Congress the total vote returned in 1880 was 241, (81 less than for Presidential electors,) of which 172 were returned for contestee and 69 for contestant; and for the legislative ticket the total vote returned was 328, of which 172 were for the Democratic candidates and 156 for the Republican candidates; according to the returns, the Democratic vote had increased from 66 in 1878 to 172 in 1880, and the Republican vote correspondingly diminished.

The committee close their report in this poll with this remarkable declaration:

Your committee decide that the contestant is entitled to have 260 votes counted for him at this poll, or 191 in addition to his returned vote; and as contestee has not proven any votes for himself, none can be counted for him.

And what are the grounds on which this poll is entirely rejected by the committee? They are the following:

1. That the ballot-box was purposely concealed from the public view by a passage-way erected to the polls.

Seven witnesses conclusively prove that it was not concealed nor any effort made to conceal it.

2. That the vacancy in the election board, occasioned by the absence of the Republican inspector, was illegally filled.

The following is a part of the testimony of Virgil George, (the father of Ephraim George,) who was chosen to serve as one of the election inspectors instead of Ephraim:

Question. Were you at Arredonda at said election?

Answer. I was.

Q. Did you or not act in any official capacity at that election, and, if so, what?

A. I did act as inspector, was elected inspector that morning.

Q. Why was it that you acted as such inspector?

A. I understood that the clerk had made a mistake when Ephraim George, my son, was appointed inspector, as he had been absent from the county for two years previous to the election, and that I was the party intended to be appointed.

Q. Are you and were you, at the time of said election, a Republican or Democrat?

A. I am a Republican, and was at the time of said election.

Q. Were you drunk or sober on that day?

A. I was sober.
 Q. Was there not any objection made by any of the voters present to your acting as inspector?
 A. None that I know of.
 Q. Did you or not, while you were acting as inspector, feel anxious for the success of the Republican party, and did you not consider it to be your duty to watch and protect the interest of that party at said election?
 A. Yes, sir; I did.
 Q. Were you so watchful of that interest?
 A. I was.
 Q. Can you state whether or not said election was a peaceful and fair election, or otherwise?
 A. It was a peaceful, fair, and square election, as far as I could see.

This witness is fully corroborated by the other witnesses. He served without complaint from those present, and his selection was entirely acquiesced in. The weight of the evidence is that he was the party whom the officer making the appointment intended to appoint.

The third objection is—
 That a Republican watcher was not allowed in the voting-room.

The facts on this point are these: J. T. Walls made application to act as "watcher" after dark, but he was rejected, and properly rejected because he was one of the candidates who had been voted for at the election. But there was an honest and efficient Republican watcher in the person of Edward Sammons. So there is nothing in this charge.

4. That the officers of election used whisky, and that Virgil George, the Republican inspector, was drunk.

The evidence proves conclusively that while there was whisky on the ground there was no such use of it by those conducting the election—either Virgil George or any one else—as disqualified them for the proper discharge of their duties.

The following are the remaining grounds of rejection:

5. That the ballot-box was thrown under the table, or so handled in the poll-room as to indicate fraud.
6. That the ballot-box after the election was in the custody of the inspector, who had the key.
7. That the election board, in violation of the law, adjourned and went to supper before counting the vote.

I will treat all of them jointly, as the transactions are closely connected.

Mr. Speaker, it is thus charged that the poll was not regularly kept after the ballots were cast. Who swears it? Not a single witness. You are asked in violation of all law to presume fraud, a thing unheard of in any judicial or quasi-judicial tribunal. All law writers hold that it cannot be presumed.

What are the facts relative to these objections? After the poll had closed, as is the case, according to the observation of every member here, they were delayed for some time in getting up their tally-sheets; dusk came on; candles were lighted; the wind was about to blow out the candles; one man picked up the box and held it; that is the time the box was removed; and if you take the preponderance of evidence you will inevitably conclude the box was never thrown under a table, for three-fourths of the witnesses who were inside, both Republicans and Democrats, swear there was no table in the room. One witness describes what was there in a very clear and satisfactory way, stating that it was a small candle-stand, not much larger than the paper upon which he was then writing. But I do not care if it was thrown down there. It was in the sight of every officer and not tampered with. There is no law requiring it to be kept either on the floor or off the floor, on the table or under the table. I do not care if it had been dropped there. There was no witness who said the lid was ever raised or any improper thing occurred with it. No one swears that the box was out of sight of any of the Democratic or Republican officers for a moment.

But gentlemen make much noise because the officers went to supper. Now, I am not a believer in a doctrine that the law is of that strictness that it precludes eating or drinking, taking a draught of water or smoking your pipe, or anything like that, after you begin receiving the ballots in the morning until they are counted out in the evening. The evidence shows it would take until midnight to finish the canvass. They had been there all day closely confined; the room was ten feet one way by about twelve the other. And to say, when their labors were to continue six hours longer—having fasted from the early morning—that they were not permitted to get any refreshment, is to say what would be absurd. The laws are addressed to men of common sense. It is expected that they will be executed by sensible men in a sensible way. The object is to prevent any improper tampering with the box? Was that not done?

I refer to this minutely, because upon this county, as has been stated by the gentleman from Texas, hinges this entire case. If Bisbee fail in this county he fails in his case. If law and justice are administered he must fail in the county. Now what did they do when they got to the boarding-house where they took supper? They all went along together, Republicans and Democrats, all in sight of the ballot-box. Not only that, but 75 men who had voted were in sight and saw all that occurred as these men went to the boarding-house and after they were there. The windows and doors were open. Everybody that had a ticket to go to the dining-room went in there. The evidence shows that the key of the ballot-box was placed in the hands of one of the officials; that the box was held by another, one of them a Democrat, the other a Republican; that one held it while the other was eating, and that it was in sight all the time. When

the first finished eating, he turned it over to a second, who held it till he ate. Now, to presume fraud under such a circumstance is to presume that lawlessness is the predominating feature of the human character, and that evidence is not to be relied on.

The gentleman from Massachusetts, whom I do not now see in his seat, [Mr. RANNEY,] said with a sneer that the laws of Florida are the strictest to be found in this country, and that they seemed to have been framed in anticipation of frauds.

A MEMBER. He did not sneer.

Mr. McMILLAN. If he did not sneer then I take it back. [Laughter.] If he did not sneer he is in no better fix than if he did. If the law was so strict the presumption that no fraud was perpetrated is all the stronger, for the law presumes that every officer does his whole duty. Take his sneer out or keep it in; I do not care which.

What a wonderful discovery this is for a statesman of the nineteenth century. What a profound utterance from one who claims to be learned in the law and of judicial mind. Does he not know that every law framed from the first civilization of man to the present day was framed in anticipation of the fact that there would be an attempt to violate some right—to inflict some wrong? Does he not know that the very Decalogue which is his moral guide and mine was framed by Deity because Omniscience foresaw that there was a tendency in men's hearts toward wickedness and wrong? If this be so, how can it be urged as a suspicious circumstance against the people of Florida that they have enacted stringent laws to maintain the purity of the ballot-box? Gentlemen on that side of the Chamber have spoken of the election laws of Florida and South Carolina and other Southern States as if they were irregular and unjust laws. They seem to have forgotten that these laws were made by their own party when the carpet-bagger was abroad in those States and powerful.

Mr. Speaker, I was surprised to hear the gentleman from Massachusetts claim this case and seek to throw out the Arredonda poll upon the ground that there were fewer votes polled for Bisbee in that precinct in this election than had been polled for him two years ago. Is not the contestant in a strait, is not the committee in a strait, is not any party in a strait when he or it has to rely upon a pretext so flimsy as the foundation for throwing out votes? To paraphrase a little Young's Night Thoughts we might say:

The spider's most attenuated thread
 Is cord, is cable,

compared to this argument.

What are the facts? There was war in the Republican camp, a war like that which we see in Pennsylvania to-day, and its fruits were brought forth. Who will come here from Pennsylvania in the next Congress and say that because my friend from Pennsylvania [Mr. BAYNE] comes back with a reduced majority, or does not come back at all [laughter] therefore there has been fraud in the election? If the gentleman should come with such a claim you would say he was casting a reproach upon his own intelligence and presuming upon the ignorance of Congress.

I have collated a few facts to show the fallacy of this position, I have gone back to some of the Congressional directories—those beautiful volumes which perpetuate the memories of men when they cannot be perpetuated in any other way. [Laughter.] I find that Hon. WILLIAM D. KELLEY, when a candidate for the Forty-fifth Congress, received 18,820 votes, but when running for the Forty-sixth Congress he received only 17,786 votes. Gentlemen of the committee, was there fraud there? If that rule will not hold good in one State it will not in another. I might make a similar comparison in the case of the vote of our distinguished Speaker, [Mr. KEIFER,] in his own State, or my friend from Pennsylvania, [Mr. O'NEILL,] or the gentleman from Massachusetts, [Mr. MOSS,] Was it ever dreamed that because a candidate's vote in one election was not so great as in a preceding election there must have been fraud? Never from the beginning of the Government till the year of grace 1882, when the Committee on Elections of the Forty-seventh Congress discovered this rule and founded the report in an election case upon it.

I have no doubt that my friend from Massachusetts [Mr. RANNEY] might feel the sands giving away under himself if he were to look around and see that here or there there had been a Republican who from some cause did not vote for him; but I suppose he would not accuse the election officers of his district with fraud on that account.

Sir, if this rule is adopted changes in Congress will be limited to the death of members. If a candidate increases his majority he is admitted under the law. If, on the contrary, his majority is diminished, this fact, according to the Elections Committee, would be evidence of fraud sufficient to turn his opponent out and put him in. There would be no getting rid of him.

Sir, under these seven pretexts the sworn returns made out jointly by Republican and Democratic officials are set aside, Judge Finley's majority and his votes swept from him, and Mr. Bisbee turned loose to poll by affidavits a vote he never got into the ballot-box. By this means they let slip "the dogs of (political) war," and we may look for sad "havoc" before the matter is ended.

In all my experience as a lawyer and legislator I have never seen a cloud of such witnesses introduced as the contestant has brought forward, 259 of the pretended voters of this polling place alone.

Nearly all of them could not read or write and hence show they could not have known with certainty who was on the ticket they voted. I pass by the fact that more than 100 of those who were brought to pull down the returns in one precinct only were of that class.

Mr. BAYNE. Will the gentleman permit me to make a suggestion? Mr. McMILLIN. With pleasure, if it does not come out of my time.

The SPEAKER. It must come out of the gentleman's time.

Mr. BAYNE. I do not wish to interrupt the gentleman if it be not perfectly agreeable to him.

Mr. McMILLIN. Since the interruption would come out of my time and I am limited, I am forced reluctantly to decline. Were I unrestricted I would be much pleased to hear the gentleman from Pennsylvania and answer any questions.

What do the witnesses swear? The gentleman from Pennsylvania has already mentioned the evidence of one or two of them. I shall quote from others. The following is the testimony of twenty-five of these two hundred and fifty-nine swearers, leaving off the immaterial portions of their evidence:

Pompey Godfrey, page 92:

Question. Did you or not vote at the election held on the 2d of November last? And if you did, state when and where, what ticket, Democratic or Republican; and if you voted for a member of Congress, state for whom.

Answer. Yes; about 10 o'clock, at Arredonda; I voted the Republican ticket; I do not know who I voted for Congress; I voted the ticket Mr. Walls gave me.

George Wood, pages 92, 93:

Answer. I voted for Mr. Bisbee for Congress.

Question. Can you read?

A. I can read a little.

Q. Did you read your ticket?

A. Yes.

Q. Who did you vote for that day?

A. I voted for Mr. Bisbee, Mr. Walls, Mr. Trapp. The other men I don't recollect at this present.

Q. Who else did you vote for for Congress?

A. I voted for some other gentleman, but can't remember the name at this time.

Q. Did you not vote for more than two for Congress?

A. Yes; but I don't remember the names.

Q. Did you not vote for Mr. Ledwith for Congress?

A. I disremember.

Q. Did you vote for President of the United States that day?

A. No, sir; I don't remember I voted for President.

William Stark, page 101:

Question. For whom did you vote as Congressman?

Answer. Mr. Bisbee.

Q. Can you read?

A. No.

Q. You did not read your ticket, then?

A. No.

Ned Lang, page 111:

Answer. I voted for Mr. Bisbee for Congress.

Question. Do you read?

A. Not much; very little.

Q. Can you read any?

A. Mighty little.

Q. Did you read your ticket?

A. No.

Q. Do you know what are the legal boundaries establishing election district No. 12, Arredonda?

A. No.

Mungen Davis, page 117:

Answer. I know I voted for Colonel Bisbee.

Question. Can you read?

A. No.

Q. Who did you vote for for President?

A. I don't know, sir.

Q. Who did you vote for for governor?

A. I don't know.

Q. Who did you vote for for the assembly?

A. I don't know.

Q. Who did you vote for for the State senate?

A. I don't know, sir.

Q. Who did you vote for for governor?

A. I don't know.

Q. Who did you vote for for the assembly?

A. I don't know.

Q. Who did you vote for for the State senate?

A. I don't know, sir.

William McClellan, page 118:

Answer. I voted for Mr. Bisbee.

Question. How long have you lived in No. 12?

A. About thirty years.

Q. Can you read?

A. No; not a bit.

Q. Who did you vote for for governor?

A. Bisbee.

Q. Who did you vote for for State senator?

A. I don't know anything about that.

Q. Who did you vote for for President?

A. I don't know anything about that. Mr. Bisbee is the only man I spoke of.

Joseph Williams, page 119:

Answer. I voted for Bisbee for Congress.

Question. Can you read?

A. No.

Q. Do you know who you voted for for governor?

A. No.

Q. Do you know who you voted for for President?

A. No.

Q. Do you know who you voted for for lieutenant-governor?

A. No.

Q. Do you know who you voted for for State senator?

A. No.

A. No.

Q. Do you know who you voted for for members of the assembly?

A. No.

Q. Do you know any of the qualifications of a voter under the laws of Florida?

A. No; I do not.

Q. Do you know anything about the boundary lines of district No. 12, Arredonda; where they are?

A. No, sir; I don't.

Ned Brown, pages 121 and 122:

Answer. I voted for Mr. Bisbee for Congress.

Question. Were you a qualified voter to vote when you voted?

A. Yes.

Q. Do you know what the qualifications of a voter are under the laws of Florida?

A. No.

Q. Can you read?

A. No.

Q. Do you know who you voted for for governor?

A. I don't know any name but Bisbee.

Q. Do you know who you voted for for lieutenant-governor?

A. No; I don't know no one but Mr. Bisbee.

Q. Who did you vote for for President?

A. I don't know any one else but Mr. Bisbee.

Q. Who did you vote for for the State Legislature?

A. I just called on the man I know—Mr. Bisbee.

Q. Did you vote for Bisbee for governor?

A. To the best of my knowledge, I did. I got my ticket from Jake Dubose.

He told me this is Dennis. I asked him what the ticket called for, and he said Walls and Dennis. That is all he said to me.

Amos Brown, page 123:

Answer. I voted for Mr. Bisbee for member of Congress.

Question. Can you read?

A. No.

Q. Who did you vote for for governor?

A. I do not know.

Q. Who did you vote for for lieutenant-governor?

A. I do not know.

Q. Who did you vote for for President?

A. I do not know.

Q. Who did you vote for for members of the State Legislature?

A. I do not know, sir.

Q. Do you know any of the qualifications of a voter under the laws of Florida?

A. In the State twelve months, in the county six. I do not know any more.

W. M. Brown, page 123:

Answer. I voted for Bisbee for Congress.

Question. Can you read?

A. No.

Q. Do you know who you voted for for governor?

A. No.

Q. Do you know who you voted for for lieutenant-governor?

A. No.

Q. Do you know who you voted for for members of the State Legislature?

A. I do not know.

Melville Haile, page 125:

Answer. I voted for Bisbee for Congress.

Question. Can you read?

A. No.

Q. Do you know who you voted for for governor?

A. No.

Q. Do you know who you voted for for lieutenant-governor?

A. No.

Q. Do you know who you voted for for President?

A. No.

Q. Do you know any of the qualifications of a voter under the laws of Florida;

if so, what are they?

A. No.

Q. Do you know where the boundary lines of election district No. 12 are?

A. No.

Simon Bell, page 126:

Answer. I voted for Bisbee for Congress.

Question. Can you read?

A. No.

Q. Do you know who you voted for for governor?

A. No.

Q. Do you know who you voted for for President?

A. No.

Q. Do you know who you voted for for lieutenant-governor?

A. No; I do not know anything about it.

Q. Do you know who you voted for for members of the Assembly from your county?

A. No.

Q. Do you know where the boundary lines of election district No. 12 are?

A. No.

Q. Do you know anything about what the qualifications of a voter under the laws of Florida are?

A. No.

Major Mickels, page 127:

Answer. I voted for Mr. Bisbee for Congress.

Question. Can you read?

A. No.

Q. Do you know who you voted for for governor?

A. I do not know.

Q. Do you know who you voted for for lieutenant-governor?

A. No, sir.

Q. Do you know who you voted for for President?

A. No, sir.

Q. Do you know who you voted for for the State Legislature?

A. I do not.

Sam Campbell, page 127:

Answer. I voted for Colonel Bisbee for Congress.

Question. Can you read?

A. I can read a little print, but not to do much good.

Q. Did you read your ticket?

A. No, sir.

Q. Do you know who you voted for for President?

A. No, sir.

George Bezant, page 130:

Answer. I voted for Bisbee for Congress.

Question. Can you read?

A. No.

Q. Did you read your ticket?

A. No.

Q. Do you know who you voted for for governor?

A. No.

Q. Do you know who you voted for for lieutenant-governor?

A. No.

Q. Do you know who you voted for for the Legislature from your county?

A. No.

Q. Do you know who you voted for for President?

A. No.

Q. Do you know the boundary of election district No. 12?

A. No.

Bob Strappies, page 135:

Answer. I voted for Colonel Bisbee for member of Congress.

Question. Can you read?

A. No.

Q. Do you know who you voted for for President?

A. No.

Q. Do you know who you voted for for governor?

A. No.

Q. Do you know who you voted for for lieutenant-governor?

A. No.

Q. Do you know who you voted for for the State Legislature from your county?

A. No.

Q. Do you know any of the qualifications of a voter under the laws of the State of Florida?

A. No.

Q. Do you know where the boundary line of election district No. 12 is?

A. No.

Ben Blair, page 136:

Answer. I voted for Colonel Bisbee for Congress.

Question. Can you read?

A. Very little.

Q. Did you read your ticket?

A. Yes.

Q. What names did you read on it?

A. Mr. Garfield, Mr. Arthur, Colonel Bisbee, Josiah T. Walls, Judge Arnov,

Mr. Trapp.

Q. Did you see all the names you say you did on your ticket?

A. I did.

Q. Do you know who you voted for for governor?

A. Mr. Conover.

Q. Do you know any of the qualifications of a voter under the laws of Florida?

A. A few of them.

Wilson Douglass, page 138:

Answer. I voted for Bisbee for Congress.

Question. Do you or not know the names of any other officers or candidates on your ticket?

A. No.

Q. Do you know what State and county Arredonda is in?

A. No.

Q. Can you read?

A. No.

Q. Do you not know who you voted for for President?

A. No.

Q. Do you not know who you voted for for governor?

A. I voted for Mr. Bisbee. That is all I voted for.

Q. Do you not know who you voted for for the State Legislature from your county?

A. No.

Q. Do you know any of the qualifications of a voter under the laws of Florida?

A. No.

Q. Do you know where the boundary line of precinct No. 12 is?

A. No.

Joe McRail, page 139:

Answer. I voted for Bisbee for Congress.

Question. Do you know what State and county Arredonda is in?

A. No.

Q. Do you know who you voted for for President?

A. No.

Q. Do you know who you voted for for governor?

A. No.

Q. Do you know who you voted for for lieutenant-governor?

A. No.

Q. Do you know who you voted for for State Legislature from your county?

A. No.

Q. Do you know any of the qualifications of a voter under the laws of Florida?

A. No.

Q. Do you know where election district No. 12 is?

A. No.

Robert Bullock, page 139:

Answer. I voted for Bisbee.

Question. Do you remember any other names on your ticket?

A. No.

Q. Do you not know who you voted for for governor?

A. No.

Q. Do you not know who you voted for for President?

A. Bisbee.

Q. Who did you vote for for lieutenant-governor?

A. I do not know.

Q. Do you know any of the qualifications of a voter under the laws of Florida?

A. No.

Q. Where is the boundary of election district No. 12, Arredonda?

A. I do not know.

Philip Jones, page 141:

Answer. I voted for Bisbee for Congress.

Question. Do you or not know the names of any other candidates on your ticket? If so, please state whom.

A. Yes; Conover, Garfield, I think he told me was on it, Josiah Walls. I do not know any more.

Q. Can you read?

A. No.

Q. What office was Walls a candidate for?

A. I disremember now. I heard them say he was on the ticket. I did not read it.

Q. Do you know what office Conover was a candidate for?

A. No, sir; I heard them say who he was, but I have forgotten all about it.

Q. Was Garfield's name on your ticket?

A. They tell me it was.

Q. What office was Garfield a candidate for?

A. I do not know.

Q. Do you know whether or not Bisbee's name was on your ticket as a candidate for governor?

A. They tell me his name was on there for governor.

Q. Do you know any of the qualifications of a voter under the laws of Florida?

A. No.

Q. Did you intend to vote for Bisbee for governor?

A. No, I intended to vote for him for a Senator.

Newton Alexander, page 143:

Answer. I voted for Bisbee for Congress.

Question. Can you read?

A. No.

Q. You do not know who you voted for for governor?

A. No.

Q. Do you know who you voted for for President?

A. No.

Q. Do you know who you voted for for the State Legislature from your county?

A. No.

Q. Do you know any of the qualifications of a voter under the laws of Florida?

A. No.

Charles Fisher, page 143:

Answer. I voted for Bisbee for Congress.

Question. Do you remember any other names on your ticket, and what offices they were running for?

A. Yes. Garfield for President, Conover for governor, Rush for the senate, Frank Dansy, Mose Simmons, Charles Thompson, and Dennis for the assembly, and that is all I remember.

Q. Can you read?

A. No.

Q. Was Garfield's name on your ticket?

A. Yes.

Q. Are you as certain that Garfield's name was on your ticket as you are that Bisbee's name was?

A. Yes.

Mr. Allen Montgomery, page 166:

Answer. I voted for Bisbee for Congress.

Question. Can you read?

A. No.

Q. Do you know any other names on your ticket except Bisbee's?

A. No.

Q. Do you know who you voted for for President?

A. Bisbee.

Q. Do you know any of the qualifications of a voter under the law of Florida?

A. No.

Q. Do you know what State and county Arredonda is in?

A. No.

Isaac Henry, pages 166, 167:

Answer. I voted for Mr. Bisbee for Congress.

Question. What do you mean by being a registered voter?

A. I mean to vote a right Republican ticket and to vote for Mr. Bisbee.

Q. That is what you understand as being a registered voter, is it?

A. Yes.

Q. Can you read?

A. A little, not much.

Q. Did you read your ticket?

A. Yes; I read some part of it.

Q. What names did you see on it?

A. I saw Mr. Bisbee's, Conover, and Walls, and I did not see any more.

Q. Did you vote for Conover for Congress?

A. Yes, sir.

Q. Do you know any of the qualifications of a voter under the law of Florida?

A. No.

Q. Who do you believe you voted for for Congress and who did you intend to vote for for Congress?

A. I intended to vote for Mr. Conover for Congress.

Q. What do you mean by "for Congress?"

A. Why, the head man of our State.

Q. What office did you vote for Mr. Bisbee for?

A. For governor.

Q. What do you mean by "for governor?"

A. Why, to rule our State.

Ben Agent, 173:

Answer. I voted for Mr. Bisbee or Bisevil.

Question. Can you read?

A. No.

Q. Do you know who you voted for for President?

A. I told you who I voted for; I voted the public ticket; I always vote that.

Q. Did you vote for the man whose name is mentioned above for President of the United States?

A. Yes.

Q. Do you know who you voted for for governor?

A. I do not know.

Q. Did you vote for Mr. Walls for Congress?

A. I do not know; I voted for Mr. Walls.

Q. You do not know, then, who you voted for for Congress, do you?

A. No.

John Clifton, page 178:

Answer. I voted for Bisbee for member of Congress.

Question. Can you read?

A. No.

Q. Do you know any other names on your ticket besides Bisbee's?

A. No.

Q. Do you know who you voted for for President?

A. No; I do not know any one I voted for but Bisbee.

Q. Do you know who you voted for for governor?

A. I do not know any one but Bisbee.

Q. Do you know any of the qualifications of a voter under the laws of Florida?

A. No.

Q. Did you vote for Bisbee for President?

A. Yes.

Q. Do you know how far the limits of election district No. 12 north, south, east, or west are from Arredonda polling place?

A. No.

Mr. Speaker, this is the kind of evidence upon which the sworn returns of election officers are to be set aside and votes counted. You will observe that on cross-examination Pompey Godfrey says, "I do not know how I voted for Congress." George Wood says he voted for Bisbee and others for Congress, which was impossible. Ned Lang says he did not read his ticket. William McClellan says he voted for Bisbee for Congress and governor both.

Ned Brown closes his testimony by saying that to the best of his knowledge he voted for Bisbee for governor. Robert Bullock says he voted for Bisbee for President. Phillip Jones says his intention was to vote for Bisbee for Senator. Isaac Henry says what he meant by being a registered voter was "to vote a right Republican ticket and to vote for Mr. Bisbee." He further says he intended to vote for Conover for Congress and Bisbee for governor. Benjamin Agent says he does not know for whom he voted for Congress. John Clifton says he voted for Bisbee for President.

The witnesses swear they do not know whom they voted for; but the committee are certain they voted for Bisbee. Remember, these are all counted for Bisbee by the committee.

And such swearing! Sir, I would as readily believe a man who swears to a wave on the ocean; or who, a month after it had fallen, identified a snow-flake in the avalanche and swore to it. Upon such evidence Judge Finley is deprived of 172 votes cast for him and Bisbee has 191 added to the vote returned for him, thus making a difference of 363 against Finley at this voting place alone.

Sir, I will now call attention to the Newnansville poll. That poll is assailed on the charge of fraud, and the contestant asks that the return be rejected, and that no vote shall be counted for either party except such as has been proven by testimony *aliunde*. The return gave to Bisbee 150 votes, and to Finley 146; a very close vote indeed. The House should bear in mind that all the evidence on which Judge Finley's vote was rejected at this voting place was taken in violation of law, after the expiration of the time for taking testimony, and hence cannot be looked to if we observe the law.

Now, what is the evidence on the subject? Edward Foster, a colored manager, appointed under the law, selected for the purpose, testifies that when the votes were counted the managers canvassed them with the utmost fairness and without regard to the political character of the votes, and that in the destruction of the overplus ballots which had been cast, they were drawn from the box by and with the consent of each inspector, and without any knowledge as to whether they were Democratic or Republican ballots, and that the destruction of said ballots was for the purpose only of making the tally-sheet of the voters correspond with the number of the ballots cast. He said that all was fairly done.

He is asked this question: "State whether or not any legal votes were rejected at the polls?" Now listen to his response, the response of a witness from a district thrown out by your committee. Recollect that it is a Republican who is testifying. He says: "They were not." "State whether or not the election precinct on said day was quiet, peaceable, and orderly?" "It was."

Valentine, a deputy marshal, one of contestant's witnesses, who was a political friend and supporter of contestant, swears, on page 26 of the record:

Well, the votes were counted out, and then there was more votes in the ballot-box than there was names to balance with; then the votes was all put back into the ballot-box, and shaken together, and then they put their hand into the box and took out, I think, twenty-nine votes to make the number even on the list. I thought they tried to do it fair.

This witness further testifies that there were several counts of the votes and several drawings from the ballot-box to make the number of ballots in the box correspond with the number of names on the poll list, as the law requires. He further testifies, on same page, 26 of the record:

"I do not know whether they (the ballots in excess) were Democratic or Republican; they were not looked at. As far as I could see, everything went right, excepting one man was objected voting, but they let him vote; that was all I see."

In connection with this testimony we cite the law of Florida applicable to the subject, which provides:

"As soon as the polls of an election shall be finally closed, the inspectors shall proceed to canvass the votes cast at said election, and the canvass shall be public and continued without adjournment until completed.

"The votes shall be first counted; if the number of ballots shall exceed the number of persons who shall have voted, as may appear by the clerk's list, the ballots shall be replaced in the box and one of the inspectors shall publicly draw out and destroy unopened, so many of such ballots as shall be equal to such excess."

I say, in view of the evidence in this case, that the requirement of the law was observed in every instance. The committee, with all its vigilance, with all its ability, has been unable to show a single instance in which this provision of the law was violated.

And yet on account of the enforcement of this law they ask that the poll be thrown out and not counted. That is the kind of argument we encounter here; that is the case which we have presented to us. Here again Judge Finley is deprived of 146 votes cast for him. This return is destroyed upon the evidence of one clerk in the land office, notwithstanding the strong swearing of the Republican officers who conducted the election. In these two voting places alone I have traced 509 improperly counted against Judge Finley, or contrary to law rejected when they voted for him. Thus the entire majority claimed by the committee for Mr. Bisbee is swept away.

Mr. Speaker, although I do not conceive it essential to Mr. Finley's success in this contest that Brevard County should be counted for him, I will show briefly the outrage done him there. His majority was 148. This must be destroyed, and in pursuance of the general

policy of getting rid of enough votes to seat the contestant we find that Judge Finley's majority there was suppressed and the county thrown out, and why? Because, say the committee, there had been no registration of the voters as required by law.

Sir, the gentleman from Pennsylvania [Mr. BELTZHOVER] has stated so clearly the facts of the case in this county that I adopt his statement. He is a member of the committee. I have examined the evidence and find him to have presented the case with strict accuracy:

What ground did they assume for throwing out the count? The ground that the voters were not legally registered. There was no doubt about their being residents; no doubt about their living there, being citizens of Brevard County, and having all the mandatory and imperative and substantial qualifications of voters. But the gentlemen contend that they were not registered. In this county, too, he took all the testimony himself out of time, without cross-examination, in the time that his testimony should have been taken in rebuttal. What did he do to show that the voters in Brevard County were not registered voters?

He went to the clerk's office, where the registration books of the county are kept. Did he call the clerk of the court, who has the custody of the registration books? No; that did not seem to suit him. He called a young deputy clerk, a Mr. McCrary, who had been in the office only two months. He asked him if there was any legal registration books in that office for Brevard County. The young man answered, and honestly I presume, "No, not to my knowledge." He next asked him, "Were the lists of electors returned to the clerk's office before the day of election?"

The deputy clerk said, "To the best of my knowledge, some were and some were not." And on such testimony as that Mr. Bisbee proposes to have you find, as the committee found, that the election in that county was illegal because the voters were not registered. And in order, as I presume he thought, to corroborate McCrary, he did not call the clerk of the court, who knew the facts, but he called the sheriff. What for? To show that in one of the precincts the sheriff had not delivered the proper election papers and list of voters.

By the way, the return from that precinct shows that Bisbee received 8 votes and Finley 9 votes. So you can utterly disregard that return, for it would make a difference of only 1 vote.

But that sheriff said something more. He said that he took the ballot-boxes and lists of registered voters and proper election papers to every precinct in that county, except that one. Now, that proves incontestably that he took the registration books and delivered them to the election board.

Now, what next do they prove? They put in a certified copy of the return and a certified copy of the county registration list. What for? The allegation had been made, and unfortunately for them they believed it, that more votes had been polled there than were on the poll lists. Now, the fact was otherwise. They put in this certified copy of the return of the vote, and it showed that there were more votes registered than there were polled.

What did the registration list show? In that certified copy of the registration list, over the signature of the clerk of the court and under his seal, it was stated that there was in his office a legal registration book for that county for that year. The certified copy of the return showed that the election was held and regular returns made from every precinct in the county, and that the vote was for Mr. Finley 222, and for Mr. Bisbee 74.

Now, I will admit, for the sake of this argument, what I do not believe is true, that it may be possible that there were no legal registration lists sent to every precinct in that county. But there was incontestably on file in the office of the clerk of the court a legal registration book containing all the registered voters for each precinct. The clerk of the court certifies: "This is a true and correct copy of the registration book now in this office."

Therefore these voters were legal voters, and the record of their registration was on file in the office of the clerk of the court of Brevard County. That is proven clearly by the testimony of the contestant himself. In the discussion of the Curtin and Yocum case this very same point was raised. In that case it was decided, in conformity with the decision in the Wheelock case in Pennsylvania, that where a registration law is even mandatory, requiring that every voter shall be registered as a prerequisite to voting, if the voter is in fact registered, and the registration-book at the county seat shows it, then, even if there is no registration list at the polls, the voter is a legal voter because he has complied with his duty, and if the officers who are to furnish the precinct copies of the list fail to comply with their duty that does not disfranchise the voter.

Now, on that reasonable view of the law, the minority of this Committee find that this vote in Brevard County, honestly cast and in no way impeached, should be counted as cast and returned.

All the evidence as to this county was taken in violation of law and *ex parte*, without notice to Judge Finley, and should not have been considered.

Sir, in the other counties the wrong done Judge Finley is not less flagrant. Votes honestly and fairly cast for him are thrown out, and votes never cast are counted for his opponent, till we wonder in contemplating it whether justice can be expected in an election case. This case of wrong may become a precedent for other similar outrages hereafter. We would do well, therefore, to heed the admonition given by Junius in the dedication of his letters to the English nation:

Let me exhort and conjure you never to suffer an invasion of your political constitution, however minute the instance may appear, to pass by without a determined persevering resistance. One precedent creates another. They soon accumulate, and constitute law. What yesterday was fact, to-day is doctrine. Examples are supposed to justify the most dangerous measures, and where they do not suit exactly the defect is supplied by analogy. Be assured that the laws which protect us in our civil rights grow out of the Constitution, and they must fall or flourish with it.

Sir, we boast of the superiority of our system of government and the freedom of the ballot in America. We should remember that of the 104,000 officers of the United States Government, less than three hundred are elected by the people directly, and less than four hundred are elected at all. Let us therefore be the more cautious when these come duly elected and properly accredited not to destroy or disregard their right.

Mr. Speaker, twenty-nine hundred years ago the ballot was used in Athens. The Greek *dicasts* voted by ballot in giving their verdicts. In voting they used sea-shells, or beans, or balls of stone, or metal, colored black for condemnation or white for acquittal.

The Romans used the ballot in voting more than two thousand years ago. In their elections if two candidates received the same number of ballots, the decision was made between them by drawing lots.

Although England originated the trial by jury, voting by ballot was not adopted there till 1872. McCauley and Grote advocated it, and it made steady progress, notwithstanding the wit and ridicule of Sydney Smith were turned against it. This great writer likened the ballot-box to a mouse-trap for catching Englishmen's votes. In Australia and other colonies of Great Britain the ballot is used.

In Germany all elections for the Reichstag are by ballot. Only registered voters can vote. The ballot must be on white paper, folded by the elector and dropped into a closed box.

In Italy members of the Chamber of Deputies are elected by ballot. The elections are held in public halls, and to which only qualified voters are admitted. Spain, Belgium, Switzerland, and Austria all have the ballot.

In the United States voting by ballot dates back to colonial times. Some of the constitutions adopted more than a century ago—as in New Jersey, North Carolina, and Pennsylvania—made voting by ballot obligatory, while some of the States have practiced *viva voce* voting.

Sir, are we going to tear down or nullify this ancient method of ascertaining the will of freemen in the very Capitol of the country? Will we destroy freedom while sitting beneath the statue of Freedom? What is the right to cast a vote worth if Congress disregards it and bars its doors against the Representative sent here by it? If I know my own heart there is no power, no political exigency, that could force me to violate right and unseat one duly elected and sent here. I trust the time will never come when I will refuse a seat to any man fairly elected, whether he come from the North or the South, the East or the West, no matter what his political faith or creed.

Sir, we should come manfully up and discharge our duty, no matter what consequences follow. Mr. Webster seldom spoke more beautifully or more truly than when he said

With consciences satisfied with discharge of duty no consequences can harm us. There is no evil that we cannot either face or fly from but the consequences of duty disregarded. A sense of duty pursues us ever. It we take to ourselves the wings of the morning and dwell in the uttermost part of the sea duty performed or duty violated is still with us for our happiness or our misery.

We say the darkness shall cover us in the darkness, as in the light our obligations are yet with us. We cannot escape from their power nor fly from their presence. They are with us in this life; will be with us at the close. And in that scene of inconceivable solemnity which lies yet further onward we shall still find ourselves surrounded by the consciousness of duty, to pain us wherever it has been violated, and to console us so far as God in His mercy may have given us grace to perform it.

Internal-Revenue Taxation.

SPEECH

OF

HON. WILLIAM H. HATCH,
OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 22, 1882.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. No. 5538) to reduce internal-revenue taxation—

Mr. HATCH said:

Mr. CHAIRMAN: I offered on yesterday an amendment to this bill, which is published in the RECORD of this morning, and which I desire to read as the foundation of the remarks that I propose now to make. It is to add to section 2 the following:

Provided, That no farmer or planter nor the executor or administrator of such farmer or planter, nor the guardian of any minor, shall be required to pay a special tax as a dealer in leaf tobacco, or as a retail dealer in leaf tobacco, for selling to consumers or others tobacco produced by said farmer or planter, or by said executor, administrator, or guardian, or received by either of them as rents from tenants who have produced the same on the land of the said farmer, planter, or minor, and all laws and parts of laws in conflict herewith are hereby repealed: *Provided*, That nothing herein shall be so construed as to authorize any such farmer, or planter, or executor, administrator, or guardian to sell tobacco by peddling the same, or to appoint or employ others to sell tobacco for him, without the payment of the special tax.

The law which I propose to repeal by this amendment is a proviso contained in the sixth clause of section 3244 of the Revised Statutes. I will explain to the committee the difference under this law between a dealer in leaf tobacco, who pays a licensed tax of \$25 per annum, and a retail dealer in leaf tobacco, who is required to pay for his license a tax of \$500 per annum. I read from the law:

Dealers in leaf tobacco, except retail dealers in leaf tobacco, as hereinafter defined, shall pay \$25. Every person shall be regarded as a dealer in leaf tobacco, whose business it is, for himself or on commission, to sell, or offer for sale, or consign for sale on commission, leaf tobacco; and payment of a special tax as dealer in tobacco, manufacturer of tobacco, manufacturer of cigars, or any other special tax, shall not exempt any person dealing in leaf tobacco from the payment of the special tax therefor hereby required. But no farmer or planter shall be required to pay a special tax as a dealer in leaf tobacco, for selling tobacco of his own production, or tobacco received by him as rent from tenants who have produced the same on his land.

And then comes this special proviso:

Provided, That nothing in this section shall be construed to exempt from a special tax any farmer or planter who, by peddling or otherwise, sells leaf tobacco at retail directly to consumers, or who sells or assigns, consigns, transfers, or disposes of to persons other than those who have paid a special tax as leaf dealers or manufacturers of tobacco, snuff, or cigars, or to persons purchasing leaf tobacco for export.

I call the special attention of gentlemen of the committee who are at all interested in the subject to this definition in the law of a dealer in leaf tobacco under the \$25 license. The law says:

Dealers in leaf tobacco shall sell only to other dealers who have paid a special tax as such, and to manufacturers of tobacco, snuff, or cigars, and to such persons as are known to be purchasers of leaf tobacco for export.

That is to say, any person taking out this license as a dealer in leaf tobacco can sell leaf tobacco only to some other licensed dealer or to a manufacturer of tobacco or cigars, or to an exporter of tobacco. In other words, it is simply for the benefit of the commission merchant. It restricts his sales alone to other persons holding a like license from the Government. Nor can he sell a pound of tobacco to an unlicensed dealer. But mark the provisions of the law fixing a tax upon the men licensed to sell in the open market:

Seventh. Retail dealers in leaf tobacco shall each pay \$500, and if their annual sales exceed \$1,000, shall each pay in addition thereto 50 cents for every dollar in excess of \$1,000 of their sales. Every person shall be regarded as a retail dealer in leaf tobacco whose business it is to sell leaf tobacco in quantities less than an original hogshead, case, or bale; or who sells directly to consumers or to persons other than dealers in leaf tobacco, who have paid a special tax as such; or to manufacturers of tobacco, snuff, or cigars who have paid a special tax; or to persons who purchase in original packages for export. Retail dealers in leaf tobacco shall also keep a book, and enter therein daily their purchases and sales, in a form and manner to be prescribed by the Commissioner of Internal Revenue, which book shall be open at all times for the inspection of any revenue officer.

Now, Mr. Chairman, this seventh clause of section 3244 of the Revised Statutes is simply a legislative fraud. It attempts to cover up the fraudulent action of the men who induced Congress to put it upon the statute-book. It never was intended for the benefit of any class of men in the United States dealing in leaf tobacco. Without having the manliness to say so in the law, these persons who procured this legislation intended simply to prevent, to prohibit absolutely, the farmer and planter, the grower of the crop, from selling it in the open market as he would any other product of the soil.

The law declares that any man who sells less than a hogshead, less than a bale of tobacco, and sells it to any other than a licensed dealer, is a retail dealer and shall pay \$500 for that privilege, and if his annual sales exceed \$1,000 shall pay in addition thereto 50 cents for every dollar in excess of \$1,000.

Mr. WHITE. And it was made on purpose to benefit the manufacturer.

Mr. HATCH. It was made for that purpose, and it was a fraud when it was done. I have before me the report of the Commissioner of Internal Revenue for the fiscal year ending June 30, 1881, Executive Document No. 4, Forty-seventh Congress, first session. On page 38 of that document I find the number of the special tax-payers, and the Commissioner of Internal Revenue certifies that there are of retail dealers in leaf tobacco in the entire United States just five—one in the State of Arkansas, one in the State of Missouri, one in New York, one in South Carolina, and one in Tennessee. On page 118 of that report I find that the amount of revenue which the Government derived from that special tax, from the 1st of July, 1881, to October 31, 1881, was \$583.34, and between the dates of July 1, 1880, and October 31, 1880, there was not one dollar received from this special tax. It was intended as a prohibition upon the farmer from selling under any circumstances to any person other than a licensed dealer a single pound of tobacco, and it has effectually served its ignominious purpose.

Mr. TURNER, of Kentucky. And yields little or no revenue.

Mr. HATCH. I have just stated the amount of revenue obtained. The chairman of the Committee on Ways and Means [Mr. KELLEY] proposes in the bill now under consideration, very generously, to reduce this tax on retail dealers in leaf tobacco from \$500 to \$250, and from 50 cents to 30 cents for each dollar on the amount of their annual sales in excess of \$1,000. What a magnanimous concession to make to the great agricultural interests of the country in a bill which proposes to "reduce internal-revenue taxation!"

Now, if the Committee on Ways and Means understands this proposition at all—and I put it in that shape because I am justified by their past action in questioning their information upon any subject; and I do not take what the majority of the Committee on Ways and Means now say to this House as authority by any means, because they have already admitted to this House and to the country that they are incompetent and unwilling to deal with the greatest question that has ever been confided to them by the rules of this House—I say if they understand this question at all they must know that the reduction of this tax on retail dealers in leaf tobacco from \$500 to \$250 is simply keeping up the snare and the delusion and will bring no relief to the farmer and the planter. They must know that the law as thus amended would be as much of a prohibition as the law now in force. No member of the committee pretends that the proposed reduction of the special tax on the retail dealer in leaf tobacco would in the slightest degree affect the restrictions and burdens imposed by the law on the farmer and planter.

The majority of that committee are very prompt to respond to every demand of the manufacturers for relief from any tax or hardship of which they complain. They have already reported favorably to the House and passed "An act to repeal so much of section 3385 of the Revised Statutes as imposes an export tax on tobacco."

The chairman of the committee reported favorably "A bill relating to exportation of tobacco, snuff, and cigars in bond free of tax to adjacent foreign territory," and recently asked the House for unanimous consent to consider and pass the same, when I interposed an objection. I do not complain that these several bills are not meritorious, but I do contend that in all the bills reported from that committee relating to tobacco, during the entire session, there is not one single word or sentence proposing to relieve the great laboring and farming classes of the country from a single burden now resting upon them under the law—not one. Hence my objection to those measures.

I hold in my hand a copy of a paper called the Tobacco Leaf, of March 11, 1882, which is recognized, I believe, by manufacturers throughout the United States as a valuable authority upon all questions affecting the tobacco trade. I find in this paper a letter dated Cincinnati, March 7, 1882, and signed by T. R. Spence, a prominent manufacturer of tobacco in Cincinnati. This letter is written to the manufacturers, urging them to combine their strength and power and influence in this country against the passage of any bill seeking to relieve the farmer of this burden and unjust discrimination. The writer, referring to the attempt made to pass, under a motion to suspend the rules, what he denominates the "free-leaf bill," on the 6th of March last, says:

Should this demonstration of favor lead the committee to incorporate the bill into a revenue measure it would of course pass; but if they do not report it, then it will be in order for the friends of the bill to move it as an amendment to any revenue bill reported by the committee, when a bare majority vote will pass it. There is no reason to suppose that it will not relatively be equally strong in the Senate, as that body is now constituted, as in the House, and that if defeated, it can only be done by the combined and determined opposition of the whole tobacco interests of the country.

It seems almost unnecessary to illustrate to practical tobacco men the disaster which such a change of law would involve.

Already it is well known that the sale of manufactured and tax-paid tobacco is comparatively very small in tobacco-growing districts, owing to the fact that the consumption has gone to the natural leaf. These encroachments are serious, and will extend with the area of tobacco cultivation, in spite of all the existing restrictions of the law. What, then, may be expected, if these barriers be all removed, and the law practically say to consumers, use tax-paid or untaxed tobacco as you choose?

How long would it be before the small farmers and market gardeners in the vicinity of every city, town, and manufacturing center of the entire country would be cultivating their fields of tobacco to be sold along with their vegetables daily at every market-place and country store, tied up in neat and convenient packages for chewing and smoking, accompanied with printed directions for sweetening and preparation?

It is needless to intimate how cheap such tobacco could be sold, and the millions it would save annually to the laboring-men, farmers, and mechanics of the country, for the great bulk of the revenue of tobacco comes from that source.

He need not feel concerned about the action of the Committee on Ways and Means "incorporating this bill into a revenue measure" because of the emphatic approval of the proposition by so large a vote of the House. That committee is a "law unto itself," and will not heed this or any other like "demonstration" by the House unless indorsed by the caucus of the majority.

Now, Mr. Chairman, I have resented in argument before the Ways and Means Committee and on the floor of this House the imputation coming from the manufacturers of tobacco throughout the United States, that the farmers of the country are asking to be relieved of this odious restriction with the view of becoming peddlers of tobacco. I deny it. I say there is not one chance in ten thousand that any farmer who raises tobacco wants to put it upon the market as a peddler. But in order to treat these manufacturers with perfect fairness, if they really have any fear that small farmers may engage to some extent in peddling tobacco directly to the consumers, and thereby interfere with the immense profits that the manufacturers are now making, I have, at the suggestion of the gentleman from Kentucky, [Mr. CARLISLE,] who is a member of the Ways and Means Committee, added to my amendment these words:

Provided, That nothing herein shall be so construed as to authorize any such farmer or planter, or executor, administrator, or guardian, to sell tobacco by peddling the same, or to appoint or employ others to sell tobacco for him, without the payment of the special tax.

This precludes the farmer from selling his crop by or through an agent or any one employed by him for this purpose, and would effectually bar him from the privilege of selling the same "at every market-place and country store, tied up in neat and convenient packages for chewing and smoking."

Dr. Spence has a very erroneous estimate of the average Western farmer, and especially of those who live in the tobacco-growing sections of my own State; they do not desire, nor would they avail themselves of, any such privilege. I admit that they could make individual sales, even to consumers, but could not become peddlers themselves or appoint agents to sell for them.

Every member of the House when he comes to vote upon the amendment must do so with the explanation I have given staring him in the face, and with knowledge of the fact that the amendment, with the proviso, merely gives to the planter or farmer who raises a tobacco crop, large or small, the privilege of going into the open mar-

ket and selling that tobacco as he would sell any other product grown upon his farm, to the highest bidder; and the moment the tobacco passes into the hands of the purchaser it becomes subject to the internal-revenue law, and to the regulations of the revenue department; so that the revenue which the Government now derives from this source will not be affected to the extent of a single dollar in the year.

But gentlemen ask "what is the necessity of this legislation?" I will answer. In the West there are many small growers of tobacco who grow less than a hoghead or bale, and who cannot afford to send it in small packages one or two hundred miles to a tobacco dealer to have it sold; there being but a limited number of licensed buyers they fix the price upon the small crops. Hence the farmer is either compelled to sell at the price they fix or his tobacco hangs in his barn and rots.

Mr. HOUSE. How does this bill affect the law of the Forty-sixth Congress on this subject?

Mr. HATCH. The law to which the gentleman refers allows dealers in leaf tobacco who buy only to the amount of 25,000 pounds to take out a license at \$5; but such a dealer can only sell to another licensed dealer. That does not affect this question at all. The complaint which the farmer and the planter make to-day is that by the legislation of Congress they are restricted from going into the open market and selling the crop grown by their toil upon their own land as they would sell any other crop.

Mr. HOUSE. If the gentleman will allow me, the act of the Forty-sixth Congress, the act of June 16, 1880, allows country merchants or others to deal in leaf tobacco to the amount of 25,000 pounds by paying a license of \$5 per annum. Any man who pays this tax may buy from the farmer the tobacco raised on his own farm. Now the point to which I wish to direct the gentleman's attention is, whether the bill before the House does not seek to repeal that privilege; does not by implication repeal that provision of the act of June 16, 1880?

Mr. HATCH. I will answer the gentleman. I have no doubt in the world that this bill does repeal that provision, not by implication, but by direct terms; for it says:

That on and after the passage of this act, except as hereinafter provided, the taxes herein specified imposed by the internal-revenue laws now in force be, and the same are hereby, repealed.

Mr. HOUSE. Then this bill takes away from the small raisers of tobacco the poor privilege they have had under the act of June 16, 1880?

Mr. HATCH. Unquestionably; and the Ways and Means Committee, I take it, have never had their attention called to it. As I said a while ago, I do not believe they have examined this question. They have taken the reports of the managers of the convention of manufacturers which was held in Washington City a short while ago as authority on this subject. These manufacturers have combined to defeat the passage of the amendment I have offered. This Dr. Spence said, in closing the letter from which I read an extract:

I do not believe the tobacco men will tamely submit to such an outrage, but that they will exhibit their spirit and manhood by fighting against it to the bitter end.

It is the proposed repeal of this outrageous and infamous restriction which prohibits the farmer from selling his tobacco as he would sell his crop of corn or wheat, in the open market, for which I earnestly contend to-day. The gentlemen who oppose this amendment say that the repeal of this restriction will encourage the use of unmanufactured tobacco, and in that way will decrease the revenues of the Government. I do not believe it. I believe that in the tobacco belt of the United States, wherever tobacco can be grown at all, every man owning a piece of land, or who rents one and prefers to chew or smoke unmanufactured tobacco, now grows in his own garden or truck patch as much as he can use or consume at home. All over my section of the State of Missouri, and all over the West so far as I have any personal knowledge, you will see these little patches of tobacco grown by the poorer classes and by the farmers, who prefer to raise their own tobacco rather than pay the price put upon manufactured tobacco. There are other persons who as a matter of choice and taste prefer to use the natural leaf, or unmanufactured tobacco. But suppose the amendment I have offered does have the effect stated; have we come to that point in the history of this country where the national Government must deny to a class of its citizens the privilege of smoking a home-made cigar or chewing a little green tobacco? Is there to be perpetuated such an inquisition as this simply because the granting of the privilege which I ask may take an infinitesimal sum from the magnificent profits made by the manufacturers of tobacco in the United States? The argument in favor of these restrictive laws is prompted by the same spirit and motives which seek to perpetuate the high protective import duties on many of the necessities of life and which compel the masses of the American people to pay enormous and burdensome tribute into the coffers of the manufacturers. Looked at from another point of view, the attempt by legislation to force the poorer classes in the tobacco-growing sections to use only manufactured tobacco is as unjustifiable as would be an attempt to compel the poor man to use only imported brandy or champagne as a beverage, or to be denied even the necessities of life unless he pays some tribute to favored manufacturers.

Mr. BUTTERWORTH. Will the gentleman permit me to ask him a question?

Mr. HATCH. With pleasure.

Mr. BUTTERWORTH. While the internal-revenue system remains are you in favor of permitting each man to brew his own ale and distill his own "potheen" or whisky?

Mr. HATCH. Is that the extent of the gentleman's question?

Mr. BUTTERWORTH. That is one, and it is in the same line suggested by my friend from Missouri.

Mr. HATCH. I think not, but I will answer it. I do not believe in the constitutionality of any law that prohibits the producer, the grower of a crop, from using it himself or in his family as he pleases. I am in favor of that Anglo-Saxon system of laws which recognizes the majesty of the proprietor, the head of the household, over his own home, his castle; and at the earliest practicable period I will favor the repeal of the entire internal-revenue system and shut out from that palace the miserable espionage of every single employé of the Federal Government from one end of the land to the other. [Applause.]

Mr. BUTTERWORTH. That is, you would break down the internal-revenue system.

Mr. HATCH. I would break down by repeal any system of taxation that destroys the principle I am contending for and encourages a detestable espionage over the sanctity of the domestic life of our people. [Applause.]

Mr. BUTTERWORTH. But that does not answer my question, which is, whether, while we continue the internal-revenue system, the gentleman would be willing to have that done which would practically defeat the collection of the taxes?

Mr. HATCH. If it will defeat the collection of internal-revenue taxes for the small farmers and producers of tobacco to sell the product of their own toil in the open market unrestrained by law, let the revenue to this extent go, and maintain the majesty and freedom of the citizen.

Mr. BUTTERWORTH. And raise the revenue on something else?

Mr. HATCH. Raise it on something else. But that is not this question. The farmer does not ask to become a manufacturer, and the gentleman's question is not in the line of my argument. The farmer does not manufacture tobacco, he produces it. He does not ask even the poor privilege of twisting it and then putting it under a fence corner and pressing it into shape, which has been declared to be a violation of this law. He only asks for the privilege of an American citizen, to go into the market and sell to the highest and best bidder what mother earth produces through his sweat and toil. That is all the privilege he is contending for. In this amendment he pledges the manufacturer that he will not become a peddler or manufacturer, nor will he permit any one to sell his tobacco for him. He only asks the privilege of taking it to the nearest market and selling it as other crops are sold.

In this connection I will read an extract from a letter which I have received from a large tobacco-grower in my district, living in in the county of Putnam. He writes me as follows:

We are very much pleased to see that you are still working away at your tobacco bill, which is to relieve the producers from the revenue tax entirely. I speak for many thousands. If that is accomplished there will soon be a vast amount of tobacco raised here; but as it is now it is entirely stopped, and will remain so until the producer is free from tax and the monopoly of commission men and manufacturers is broken up.

At this time the manufacturers will not talk to a producer about buying his tobacco, but will tell him they can buy to a better advantage of the commission men. So they can, as they can get it at their own price. One manufacturer will not bid against another, as they can have it all their own way as soon as the producer puts his tobacco into the commission men's hands. Now, I would say, take no revenue off tobacco except to relieve the producer entirely, and tobacco will be cheaper to the consumer and a greater source of revenue. It is a matter of fact that many thousands are now on half rations, both in chewing and smoking, that is, those who have to buy, owing to the high price. The producer never realizes any of the high prices; all those that handle it make the easy money. I wish you success in your undertaking, and I am not alone. I have not seen a man yet but says he knows that this is one of the most unjust laws that was ever enacted.

That is a sample of a large number of letters that I have received from farmers living in the district I have the honor to represent, and fairly expresses their views upon this subject.

In conclusion I want to say a word or two about this bill. Its first proposition is to repeal the stamp tax on bank checks, drafts, orders, and vouchers. If the Ways and Means Committee will bring that proposition before this House as a separate and independent one I will very cheerfully vote for it. I have never believed in a stamp tax. I do not believe in any system of stamp taxes, and of all the war taxes left to-day upon the statute-book there is less fairness, justice, and equality in this two-cent check-stamp than any other I know of. As a plain illustration of it, the poor woman who works daily for her living and earns her little sum, which she hoards in the savings-bank, when she comes to buy a load of fuel in the winter and wishes to draw two or three dollars out of the bank has to put a two-cent stamp upon the check, while the great railroad king of this generation when he comes to buy a railroad and draws his check for \$5,000,000 pays simply two cents, the same tax that the poor laboring-woman pays for her two or three dollars in the savings-bank. For that reason I would cheerfully vote for the repeal of this measure. But this is the only one in connection with this bank proposition that I will favor at this time. Now I have said that I did not have a great deal of confidence—

Mr. WILLIS. Will the gentleman allow me to ask him if he is opposed to the removal of the tax upon proprietary medicines? They are largely used by the laboring-men and the farmers.

Mr. HATCH. Well, that depends altogether upon whether it is coupled with something else. Standing by itself or in this connection I will not vote for it. I will not vote for the removal of any of the taxes embraced in this bill, except the repeal of the tax on matches, unless you begin at the right end of the line and relieve the laboring-men and farmers of the country at the same time that you relieve the manufacturers of proprietary and patent medicines, the bankers, and capitalists.

Mr. SPARKS. You do that by repealing the stamp tax on proprietary medicines.

Mr. HATCH. No, sir, not to any appreciable extent, if at all. The repeal of that tax simply inures to the benefit and profit of the proprietor and manufacturer, not to the consumer.

But I was going to say that I do not take everything that comes from the Ways and Means Committee as authority, and I wish to add just this much in conclusion: I had the honor of addressing a few remarks to this committee when the tariff-commission bill was before the House, and I expressed myself in rather plain language in regard to that bill, as well as in regard to the Ways and Means Committee for advocating it upon this floor. And I desire to say now, after the President has wrestled with the subject for several weeks, that not a single criticism which was made upon that bill from the beginning to the end of its consideration in the House has not been justified by subsequent developments. Take one of these page-boys before me, blindfold him, and start him out in search of nine members of this body to serve as tariff commissioners, and he would search in vain for nine men as ill-qualified in character, ability, and special fitness for the work of revising the tariff as are the men selected by the President out of two hundred applicants and after a month of Cabinet consultations.

Election Contest—Smith vs. Shelley.

SPEECH

OF

HON. AMBROSE A. RANNEY,

OF MASSACHUSETTS.

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 20, 1882.

The House having under consideration the contested-election case of Smith vs. Shelley, from the fourth Congressional district of Alabama—

Mr. RANNEY said:

Mr. SPEAKER: Before proceeding to the discussion of this case I wish to advert to the fact that the contestant, Mr. Smith, died after the committee had agreed upon their report as it now appears before the House. Having found that he was elected and entitled to the seat which the contestee, Mr. Shelley, now holds, the committee were of the opinion that the legal effect of the death of Mr. Smith was to leave the seat vacant, and that it must be so declared. The resolutions proposed were then changed and framed upon that theory. Assuming that the finding of the committee is correct upon the main issue, I suppose no one will seriously controvert the other proposition, and I shall not therefore discuss that point. I am aware that some members upon this side of the House have been inclined, from personal considerations or motives of expediency, to allow this contest now to pass by and let the sitting member remain. But I insist that this would be a plain violation of the duty of the House if he was not elected. The House has no right to elect a member; that is the right of the electors of the district. Mr. Shelley has already been allowed to occupy a seat in this House during two terms of Congress when his right to the seat was contested, and this is the first time that any one has been able to get a report before the House for determination. Each prior contest was sent to a committee, and no report whatever was made. At each time grave charges were made against the election, similar to those made in this contest. It is now due to that district that this contest be decided, and let the legal consequences of that decision follow, whatever they may be.

I come, therefore, to the single question before the House: Was Mr. Smith elected to the Forty-seventh Congress? Upon the evidence and proofs found in the printed record it appears to me to be so plain as to be placed beyond the realm of dispute. Indeed, if gentlemen have read the record, with the reports, and become familiar with the facts, it seems to me that it might be considered a reflection upon their intelligence to assume that any further presentation or argument of the case is needed. But as all members have not probably been enabled for the want of time to thus familiarize themselves with the facts, I will proceed to present the case as fully as I may.

Contestee was awarded his certificate on a declared vote of 9,301 for himself, 6,650 for Mr. Smith, and 1,693 for one Mr. Stevens, a colored man, who ran or played the rôle of an assumed third candidate. This gave contestee an apparent majority of 958 over both the other candidates, and a plurality of 2,651 over Mr. Smith. How this result was achieved in a Republican district with an undoubted majority of from 15,000 to 18,000, when there is a free ballot and an honest count, is the interesting question which has been investigated in the present contest. Listen, and I will tell you. I have to say, generally, that it was achieved, first, by rejecting the returns, or for the want of proper returns, from fourteen precincts—seven in Dallas County, four in Lowndes County, and one each from the counties of Wilcox, Perry, and Hale—arising in some of them from the fault, mistake, or ignorance, of the inspectors, and in others occasioned by the wrongful conduct of the partisan friends of the contestee; secondly, by means of conspiracy and fraud. The contestant in his printed brief, filed for the use of the committee and the House, asserts:

The evidence taken by the contestant and submitted to the House contains proof of every species of outrage on the electors' rights known to the professional expert in election frauds; conspiracies to prevent elections being held where the Republican electors were greatly in the majority; robbery, burglary, and larceny of the ballot-box appear to have been committed; bribery of United States supervisors resorted to; stuffing ballot-boxes with ballots never cast; fraudulent count of ballots cast; false statement of election returns, are only some of the disreputable means resorted to in order to defeat contestant in the fourth Congressional district of Alabama.

The members must judge how far this claim is sustained in the case as I state it.

In the fourteen precincts from which there were no legal returns, the actual vote as cast at elections legally held was in the aggregate 4,029 for Mr. Smith and 282 for contestee. I lay Mr. Stevens aside, for he becomes of no account in the computations to be made on a question of plurality, and as in fact he seems to have received few, if any, votes in the precincts now being considered.

If the House count the vote as actually cast in these fourteen rejected precincts and correct the official count accordingly, this elects Mr. Smith by a plurality of 1,098 votes over Mr. Shelley, and without disturbing the returns made in the other precincts and counties.

This the committee have done upon satisfactory proof being made of the vote as actually cast by legal electors, under a rule of election law which will not be controverted by any member; it is the law of Alabama also:

It is the election that entitles the party to office, and if one is legally elected by receiving a majority of legal votes his right is not impaired by any omission or negligence of the managers subsequent to the election. (*State ex rel. Spence vs. The Judge of the Ninth Judicial Circuit*, 13 Ala. Rep., 805.)

Nor will a mistake by the managers of the election in counting the votes and declaring the result vitiate the election. Such a mistake may and should be corrected; the person receiving the highest number of votes becomes entitled to the office. (*State ex rel. Thomas vs. Judge of the Circuit Court*, 9 Ala. Rep., 338.)

In the report of the majority will be found references to the evidence and proofs by which the actual vote as cast is established, and I challenge the closest and most careful scrutiny of the same. I will not stop to show whether the returns were so defective as to justify their rejection in all cases by the county supervisors. I concede that point for the purposes of the argument. Most of them were defective and not in conformity to law, without doubt. Concede that they all were, and then it becomes simply and only a question of competency and sufficiency of proof.

In that view, as assertions and denials on either side are easy and unsatisfactory when standing alone, members will please see what the proofs are. They will find the evidence to be plenary in every instance, and without any substantial conflict or contradiction. The vote as proved accords with the report of the United States supervisors, made to the chief supervisor, when there was one made at all, as there was in most instances.

We do not need to use the supervisors' reports as substantial evidence. The competency of that class of evidence admits of some question, and is the subject of a division of opinion among members of the committee. They being in evidence and printed in the record, are referred to only as confirming or not the testimony of the witnesses called to prove the necessary facts. The vote as sworn to corresponds in most every instance with what was the well known state of the vote in each precinct in prior elections and as known to well-informed individuals.

After contestant had adduced proof deemed sufficient, and which, if not impeached or controlled by counter-evidence, appears to be adequate, to prove the issue in hand, contestee in no instance, as I now remember, has attempted to impeach or control the same by evidence of his own. He and his counsel and the author of the minority report have contented themselves with criticisms upon the testimony of contestant, attacks upon his witnesses because of their alleged ignorance and illiteracy, and with technical objections which are in my judgment, and in the judgment of the committee, unsound.

It would have been much more satisfactory if the contestee had adduced evidence on his own part to show, if he could, that what contestant's witnesses testified to was not true. If the vote as sworn to was untrue or improbable even, there was ample means of proof. For instance, in the seven precincts in Dallas County the Democratic vote sworn to ranged from 1 to 40. If more than that voted in either of the precincts it was easy to prove it.

It must be remembered that this is not a case, so far as regards the fourteen precincts now being considered, where the contestant is attempting to overthrow and control the returns of sworn officers of elections, as against presumptions of verity. The rule of law is quite different in such a case.

To come down to more detail. As to precinct Prairie Bluff, in Wilcox County, the rejection of the return was on such flimsy ground and the proof of the vote cast so clear that the author of the minority report concedes that that vote should be counted. If he concedes anything which is adverse to contestee, I will not dwell on it as needing any argument. The vote there was 335 for Smith and 24 for Mr. Shelley.

The seven precinct returns rejected in Dallas County were simply irregular and informal, some of them only because the inspectors or some of them signed by their mark, not being able to write. The vote is proved by the evidence of the inspectors, supervisors, and others, who were present at the polls, saw the ballots cast, counted and tallied, and knew personally whereof they testified. There are generally two or three witnesses to the main facts, and in one instance, where the Democratic United States supervisor acted, his report accords with that of the other officer of the kind.

The author of the minority report has made strictures upon the testimony of one Martin in Martin's precinct.

He has singled this one out in an earnest search to find something to comment upon. Here the contestee has not attempted to prove the facts sworn to to be untrue, contenting himself with the contention that an inspector who could not read or write was unable to count ballots accurately. This inspector had the help of two other men who could read and write and who joined him in making the count. Nathan Stratten, a minister of the gospel, helped him. Now let every member read all the evidence of Messrs. Martin and Pettway in direct and cross examination, compare the same with the United States supervisor's report and the imperfect return made by the inspectors, and see that they all agree, and with what scrupulous care and fidelity they discharged their duty, and that not a scintilla of evidence is adduced outside of it to discredit their evidence or affect the facts sworn to, when if it existed it was at hand and could be had, and he will find a verification of what I say as to the criticisms made as to this precinct. And if the proof as to that is an instance of the weakest, what shall be said of the others? I shall not go into the other proof as to the Dallas County precincts now referred to, as the same is uncontradicted and without conflict and does not require it, provided any faith can be placed in human testimony. I do not consider that there is any occasion for it, but shall allude hereafter to some general criticisms deemed captions.

If the elections in these seven precincts were conducted by illiterate officers the Democratic partisans of contestee were responsible for it, and defective returns were just what was schemed and planned for in a manifest conspiracy, designed either to prevent elections being held in most of the thirty-one precincts of Dallas County, or failing in that, to have them so held and the returns so made as to lead to the rejection of the returns. That charge is made by contestant in this case, and, to my mind, is proved by the evidence. Let us verify this charge. The first step was for the board of county supervisors, composed of the sheriff, probate judge, and clerk of the circuit court, (and which said board were to canvass the returns made from the precincts,) to appoint three inspectors for each polling precinct, under a legal obligation resting upon them by virtue of a statute to give the Republican party at least one of them.

The Republican organization asked to be allowed to suggest suitable persons for Republican inspectors. This request was declined. Two intelligent persons were appointed as Democratic inspectors. They were strong partisans. A supposed Republican was appointed for the third inspector. Save in two or three instances this third man was not known personally to the appointing power, but was suggested by somebody, but by whom the probate judge and the sheriff swear they do not know or remember. It is, however, a significant fact that they were all either doubtful Republicans or illiterate. This, whether designed or not, prepared the way and rendered probable what happened, and may be presumed to have been contemplated. What contestant charges as to the intention and design of such action may be given in his own language as printed in his brief:

The fact is that two sharp Bourbon Democratic managers and one ignorant negro, supposed to be a Republican, and who could neither read nor write, were selected to hold the precinct elections, the object being either to have no polls of election opened, a defective or false certificate of returns, or a false count of the ballots cast, as the surrounding circumstances appeared best suited to accomplish the desired end. If a false count of ballots cast appeared best, the "hocus-pocus" game was to be done on the ignorant negro, who could neither read nor write nor count by number or figures. If a false or defective certificate of ballots cast could best accomplish the fraud, the ignorant negro could not sign his name to the inspector's statement; the election law required such signature. If it was thought more prudent to open no polls of election, the two educated white Democratic inspectors failed to appear at the place where the polls were to be opened, and the ignorant negro man, supposed to be a Republican, (on account of his color,) is left alone to open polls and hold an election.

That there was a deep-laid conspiracy between the Bourbon Democratic managers to have no polls open and no election held in Dallas County is clear from the fact that at the State election held in August of the same year the sheriff, probate judge, and the clerk of the circuit court being candidates for office, and at which time they claim to have been elected, polls were open and elections held and returns made from every precinct in the county except two, and the return of votes from each precinct were all counted.

Let the House judge of this by what happened. When the day of election arrived the inspectors appointed from the Democratic party, and some of those appointed as supposed Republicans, did not appear at the polls and act as inspectors, but kept away altogether; or, if any one appeared, he refused to act. The result was that in most of the precincts the polls were not opened, and the vote of those precincts was lost entirely to Mr. Smith, as we do not and cannot legally compute the vote which would probably have been cast. In some few precincts where the Democrats were in a majority—three in number, I think—the Democratic inspectors did appear and hold an election, and the returns were counted by the board of county supervisors.

By the law of Alabama, in the absence of any inspector the rest of them may fill the vacancy; and if all are absent the electors present may choose a new board and proceed.

In most of the precincts in Dallas County the electors did not know enough of law or failed to choose other inspectors and to proceed with the election. Elections were held in a few precincts where the Democrats were in a majority, and the returns from them were counted, showing an aggregate majority as returned for contestee in those precincts of 536 over contestant.

It appears that the Democratic United States supervisors acted with like unanimity in Dallas County in not appearing and discharging their duty, in apparent concert with the inspectors. It appears also that the ballot-boxes and the necessary and usual instructions and blanks for poll lists and returns were not distributed so as to reach the polls in Republican precincts. The sheriff says he distributed them. But if he did it must have been to the officers of his own party, who retained them. In the seven precincts named, where contestant has proved the vote because of the rejection of the returns, the blanks did not come, and cigar-boxes had to be used for ballot-boxes.

The board of county canvassers rejected returns because not signed by the inspectors, and even when signed by their mark, when that was the probable and natural result of their action in appointing illiterate men, and which may fairly be presumed to have been intended at the outset. The sheriff, one of the board, joined in rejecting returns because they were informal and insufficient, when he is responsible for it, for the reason that he failed to furnish the necessary and usual written instructions and forms.

No statute enacted expressly that inspectors should be able to read and write. No penalty attached to the neglect of the sheriff to distribute the ballot-boxes and requisite blanks. It was no misdemeanor punishable by law for inspectors not to appear or to appear and refuse to act, although the statute imposed it as a duty. They could say, and perhaps did say, among themselves: "We will not go and act. If we do not appear, the law provides a mode of conducting an election in our absence. Now, we will keep away and see if those colored voters know enough to hold an election and make returns according to law; our party has not got any votes in twenty-eight precincts of Dallas County worth looking after. We will withhold the blanks and all written instructions, and leave the colored men to their own unaided resources." But when they conspired together for the end indicated, and thus involved the violation of a duty imposed by express statute, I submit that it was a criminal conspiracy.

Now, sir, I ask the gentlemen of the other side if they will aid in the accomplishment of such a conspiracy and take the fruits of it? The whole drift of what is said in the minority report lies in that direction, and if sustained will have that result. Look at it. See the kind of objections made and criticisms indulged in. They are based on the allegation that the electors and officers in the precincts in question were ignorant and did not do their duty; did not know enough to administer the requisite oath; were unable to read and count the ballots properly; could not write out the requisite poll lists and returns; did not preserve the ballots, but sent them in some cases to the county canvassers, (as the law once required in Alabama,) and therefore should not be believed as witnesses.

If there was ever a case where judges should not exact the strictest proof, this is that case. But here there is no occasion for the exercise of any favor in that regard, as the contestant could and did make strict, competent, and ample proof of the requisite facts. One oath administered was as follows:

I told them to raise their hand and say, you solemnly swear to go forth and do the best they could in this election, to discharge those duties.

It is said that hats were used in counting in one case, directory statutes not being literally complied with in some particulars; that it is not proved that the voters were legal electors.

The inspector, or the electors, knew enough of law to organize the polls and enable voters to cast their ballots. It appearing that a board of inspectors was duly appointed and sworn, and that they received the ballots offered, it is to be presumed under a rule of law well settled that the votes were legal until the contrary is shown, and there is no evidence to the contrary. Contestant did not prove the vote by producing the written ballot itself. That was not necessary, as the ballots were not preserved, and were not shown to be in existence intact when the evidence was taken, but the contrary appears in most cases.

I do not adopt the rule of law invoked as sound. Certainly the rule does not apply in this case, as the law relating to their preservation was not kept in many instances, and the statute at best is not such as to insure the safe keeping of the ballots intact.

It is objected that the voters were not called to prove how they voted. When returns are to be contested, and there is a conflict of evidence, the evidence of the voter is often important. It was so in *Bisbee vs. Finley*, where a false count and return by the inspectors was alleged and attempted to be proven. Not so here, where the thing to be proved is what was the vote as cast and counted in the absence of a return. In *Bisbee vs. Finley* the author of the minority report said the evidence of the voters did not amount to anything, and he disregarded the evidence of 259 of them, saying that the other kind of evidence was better and more reliable. Here the other kind of evidence is used, and the same gentleman now says that is good for nothing, and the voters should be called. So it goes with him—the same rule of law is sound at one time and unsound at another.

It will be seen that the vote of the seven precincts in Dallas County, as proved, is 2,158 for Mr. Smith and 54 for Mr. Shelley. Allowing this, and it reduces Shelley's majority to 547. Deduct from this the majority of 311 got in Prairie Bluff precinct, in Wilcox County, which was rejected on a frivolous pretext, and which the minority report concedes should be counted, and the majority is reduced to 236 only.

I now proceed to the other six of the fourteen rejected precincts, to which I now ask the attention of the House. Here the rejection arose from defective, or the want of, returns, which was the result of attempted and partly successful frauds.

In Hopewell precinct, Lowndes County, the vote of 116 for Mr. Smith and 17 for Mr. Shelley was not counted because of insufficient and defective returns. As this affects the majority by only 99 votes I will spend little time upon it. The evidence is reasonably satisfactory in the absence of all contradiction and counter-proof as to what the vote was. Contestee's evidence comes from two witnesses, and bears not on that issue but on the alleged tampering with the box after the count was made. His witnesses are implicated in the charge. They evade rather than meet the charge made upon them, and were not cross-examined because no opportunity was afforded. One of them, Sheriff Graves, was implicated in another transaction of the same kind, and was indicted soon after for the alleged offenses. At best it only tends to prove that the returns of the vote were not made by the inspectors, or were abstracted by somebody from the box before it reached the county canvassers. The objection made to this precinct is that only two inspectors acted. The Democrats declined to act, although present part of the time. Others were chosen, and the ballots were taken regularly and deposited, and a return made, but the box was tampered with by somebody afterward and the returns abstracted. The return, however, was irregular, as only two inspectors signed it. No Democrat would act, evidently for the purpose of destroying the poll or preventing a regular return, and we find that the vote cast should be counted.

As to Benton precinct, another of the fourteen precincts alluded to, I will simply repeat what I have inserted in my report, as covering all I have to say:

It appears that at the election in Benton, in the same county, the appointed Democratic inspectors present on the morning of the election refused to open the polls and hold an election, stating it was too late to open the polls. The hour of nine o'clock having arrived, the Republican colored electors present, seeing that no election was to be held, organized, under the election law of Alabama, and held the election, which resulted in having cast for the contestant 156 ballots. The appointed Democratic inspectors, who said it was too late, and said there would be "no election that day for Garfield or Hancock," then opened a second polling place and held an election, where 51 ballots were cast for contestee. The box from this second polling place was received by the county returning officer (the sheriff), and the box containing the 156 ballots cast for contestant was rejected by the sheriff and not counted by the board of county supervisors; the contents of the ballot-box are exhibited in the record.

We hold, as matter of law, that the sheriff should have received the ballot-box and permitted it to go before the board of county supervisors; and further, as matter of law, that after the first election polls were opened the second polls were not authorized and should not be recognized, and therefore the 156 ballots cast at the first polling place should be counted for contestant. The declination by the appointed inspectors terminated their authority, and the new appointees then alone had a right to act. The United States supervisors cannot be present where precincts are multiplied. It would be a dangerous power and may be used for the purposes of corruption.

As to another of the fourteen precincts alluded to I take the statement as made in the report and have only to repeat it:

At the election held at Pintala precinct, in the county of Lowndes, it appears from the proof that after the electors had cast their ballots the closing hour had arrived, and the counting of the ballots cast should have commenced, a voter of the precinct appointed to act as one of the three inspectors previous to the election, an active supporter of the contestee, but who refused to act on the morning of the election, entered the polling room, having with him a satchel with a partition in the middle, in one side of which he had a cigar-box stuffed with false ballots, and took from the table the ballot-box, into which the voters during the election had cast their ballots, and placed it in the empty side of the satchel. In a few minutes a confederate, in a buggy, called him. He took from the satchel the fraudulent, stuffed box and placed it upon the table, closed the satchel containing the true ballot-box and ballots, and jumped into the buggy and left with his confederate. The false ballot-box reached the board of county supervisors, certified to by the election officers as a false and not the true box. From the proof made it is shown that at the time of the robbery of the true box there were in it 320 ballots cast for contestant, and 40 ballots cast for contestee.

The evidence as to this transaction is given quite fully in the report, and I will not stop to read it.

As a reason why the evidence is not controverted it is said that Holcombe is dead. But his son-in-law and confederate is not dead. He is not called. If the son-in-law allows the charge to stand uncontradicted it may safely be assumed as true.

All the minority can say about the Pintala precinct, after some

flippant allusions and statements, is that there is some mystery about it. Now, as to Whitehall precinct. I read from the report:

At the election in Whitehall precinct, in the county of Lowndes, the uncontradicted testimony shows that there were cast for contestant 276 ballots, and for the contestee 14 ballots, and it also appears that the precinct returning officer took the ballot-box used for the purposes of the election to the sheriff, the county returning officer, who, being informed of the vote cast for each candidate at Whitehall precinct election, refused to receive or receipt for the box, because it was a pipe box that had been used for the purposes of the election. This county returning officer is a Democrat in politics, and an ardent supporter of the contestee, and after refusing to receive or receipt for the box he desired the precinct returning officer to put the box on a desk in his office, which was done. It is in proof that the ballot-box, when delivered to the precinct returning officer, had in it, properly secured, the whole number of ballots cast, 276 of which were cast for contestant and 14 were cast for contestee, and the list of voters who cast ballots at the election, which is exhibited in the record. When this ballot-box was before the board of county supervisors its appearance showed that it had been opened from the bottom, and by this means stuffed with fraudulent ballots instead of the true ballots cast by the electors. All of contestant's votes but 54 were abstracted with the returns, and 200 or 300 of ballots for Stevens stuffed in.

Now, wherever contestee could get any seeming or actual contradiction, he has got it apparently. The fairness of the minority as to this Whitehall precinct may be judged of by the way in which the evidence as to this last box is treated and attempted to be met. It recites this from McDuffie's testimony, as though that was all of it:

It is my opinion from examination and inquiries I have made that there was a fraud at Whitehall beat, and that it was done by the box being opened from the bottom and everything in it except 45 tickets with Smith's name upon them taken out, and these Stevens tickets put in.

But the witness says, preceding that, what their report omits:

The box produced before the board of supervisors from Whitehall beat was a wooden one, and a little larger than a cigar box, and about the shape of a cigar box; a little taller, I think. It had a hole in the cover over which was pasted a white slip of paper upon which was written, "Whitehall box," or "Whitehall beat."

There was in that box 45 ballots for Republican electors for President and Vice-President of the United States, and the name of James Q. Smith for Congress, and a lot of tickets, I should say from 200 to 300, with the names of Republican electors for President and Vice-President and the name of William J. Stevens for Representative in Congress. All of the Smith tickets had been folded and a hole near the center of them showing or looking as if they had been strung upon a string. None of the Stevens tickets had been folded nor had they any perforated mark upon them. From their appearance Smith's tickets looked as if they had been voted, and Stevens's tickets as though they had not been. In fact, in the shape in which they were they could not have been put through the hole in the ballot-box.

Mr. Duffie was twelve years a judge of probate, and of high standing. Couple this appearance of the box and contents as stated by him with the uncontested proof that the vote as counted and as the ballots stood when put into the box and carried to the sheriff's office was 276 for Mr. Smith, 14 for Mr. Shelley, and none for Stephens. Without first controlling or at least throwing doubt upon that evidence, and when it is not pretended that the box was tampered with before delivery to the sheriff, (Mr. Graves,) it is manifest that it was tampered with afterward and by somebody before it was given over to the board of county canvassers, of which Mr. Duffie was one.

Now, will the author of this minority report seriously contend that the evidence of Mr. Graves meets and refutes their charge as to the White Hall box? He cites it in his report as though it did. Mr. Graves swears about it this and nothing more:

Question. Did you receive any returns from said election from White Hall beat?

Answer. I receive a box purporting to be from said beat, not marked nor labeled, which I kept and delivered to the board of supervisors.

Q. State if you remember what were the contents of said box when it was opened by said board of supervisors.

A. It contained a lot of loose tickets and nothing else.
Q. Was any count made of the tickets by the board of supervisors?
A. There was no count made of said tickets by said board.

Mr. Graves contradicts no one in the points before stated, save so far as he would have us infer that the box was not tampered with after he got it. He says he "kept it and delivered it to the board of supervisors." Kept it where? Who had access to it meanwhile? He "kept and delivered the box." So he did. But how about the contents, Mr. Graves; were they changed meanwhile? Did you change them yourself? We suppose not, of course, but please state what opportunity any one else had to do it, in your office or elsewhere, if you did not?

The minority report erroneously states that Mr. Graves says he delivered the box and contents as he got them. Not so. His evidence is, or seems to be, carefully worded, so as to be true even if the contents had been tampered with and he did it or knew of it.

In Newbern precinct, Hale County, an election was held at which 388 ballots were cast for Smith and 103 for Shelley, but at the close of the voting, and before proceeding to count, another box with prepared contents was substituted for it by two Democrats and attempted to be used for the real one; but the fraud was discovered in season and the scheme abandoned, resulting in the vote not being returned or counted at all. The facts are given by Merritt House, a twenty years' resident of Newbern, a school-teacher, he being a United States supervisor. I will read his evidence:

When the polls were closed, the inspectors, Mr. Wyley Croom, Noah Huggins, wanted to take the ballot-box from the room in which we had held the election into an office outside of the room and building where we held the election; to this I objected, and insisted upon counting the ballots there. To this Mr. Croom said he would be damned if he didn't do it. By this time it had got dark inside the room, and I said, "If you will go in there I will take the box and carry it along."

Mr. Huggins says, "You put that box down, by God; Mr. Croom is the man to carry that box." I then put the box down; Mr. Croom then took the box up, put the papers—poll list—on top of the box; then we started from the front of the store to go out of the store at the back door, and before getting to the back door Mr. Croom and Mr. Huckleby, one of the clerks, went behind a hay-pile.

Robert Lee, the colored inspector, said, "What are you all going around there for? You know you can't get out there!" Mr. Croom said, "Oh, that is so;" and they then turned and came back and got to the right side of this hay, where there was a door and we could see, and Mr. Johnny Huckleby had the box. Robert Lee, the colored inspector says, "What are you doing with the box, Mr. Huckleby?" Mr. Huckleby said Merritt saw him pick the box up off the counter; witness is Merritt. I said, "No, sir; it was not you picked it up; it was Mr. Croom." To this there was no reply, and they then walked out into the next room. When we got into the next room I said, "I am not satisfied about this box." Mr. Huckleby tried to draw my attention on to another subject. Then we commenced counting, and counted a good many tickets. I then discovered that this was the wrong box. I had marked the box in the polling-room with a straight mark with my knife under the lock, and Bob Lee made a mark across my mark, and the one we had in there had no mark on it.

I then got up and said, "There are illegal tickets here. I thought something would be wrong was my reason for not wanting to come in here." I then went outdoors, and tried to go back into the room where we had been all day. I was told that the key was lost, and they wanted to know what I wanted to go in there for; I told them I wanted to go in there to get the right box; that the one they had counting tickets out of was an illegal box. Mr. Croom and Lewis Turpin let me go into the store-room in the front, and then I asked to go back to the hay-pile, and they would not let me go, saying that that was his private room; they then made me come out of the store. Noah Huggins, one of the inspectors, then threatened to shoot me, and I said, "Gentlemen, if I cannot count the right box I will go home," and then I left. This was about nine o'clock p. m.

In cross-examination he says further:

Question. State everything that was said by Inspector Croom or any one else when you insisted that the vote should be counted where it was cast; state fully.

Answer. Mr. Croom said he be damned if he was not going back in that shop or office to count the votes; I then said if he would go I would take the box; I then took it up to carry it out; Mr. Huggins, the other inspector, said, "You put that box down, by God; Mr. Croom is the one to carry that box." I then put it down.

Q. Did you all start toward that office at once?
A. We did.

Q. When you reached that hay-pile which side did you have to go on without going outside the store to reach the door going into the shop or office?

A. You had to go on the left side.

Q. When you passed that hay-pile you stated that Croom and Huckleby went behind it; did they not return as soon as they were informed they could not get through that door?

A. They did not; they hesitated awhile there and then came back.

Q. How long did they hesitate, and did any one besides Croom and Huckleby go on the left-hand side of that hay-pile?

A. They hesitated about three or four minutes; perhaps not so long, and it may have been a little longer; and no one else went on the left-hand side of the hay.

Q. What was the balance of the party doing all that time, and what comments were made about their going on that side of the hay-pile; by whom was it made and what was said?

A. The rest of the party stopped and waited till they came back. Bob Lee said to them, "What are you going that way for; don't you know that you can't go through that way?" Mr. Croom said, "Oh, yes; that's so." When they returned we saw Mr. Huckleby had the box instead of Mr. Croom, and Robert Lee said, "What are you doing with that box, Mr. Huckleby?" Huckleby says, "Merritt saw me pick up this box from the counter." I said, "No, sir; it was not you picked it up; it was Mr. Croom." Nothing else was said, and we went to the office.

Q. Is it not a fact that Mr. Croom handed Mr. Huckleby as soon as he took it off the table?

A. No, sir; he did not.

Q. Might he not given it to him before reaching that hay-pile without you observing it?

A. I don't think he could; Mr. Huckleby was behind Mr. Croom and I was by their side.

Q. Why should the fact that Mr. Huckleby had that box when he returned from behind the hay-pile excite any suspicion in your mind that anything was wrong?

A. Because I had picked it up as an officer and they refused to let me carry it, and Mr. Huckleby was only a clerk, and that was my reason.

Lavender, a ten years' resident of Newbern, a farmer, testified:

Question. Did you see anything about the time the election was closed tending to show to an unfair election on the part of the inspectors?

Answer. I did; I saw Dennis Starkie carrying a box on his shoulder across the street toward the polling room, and I saw him take out of this box another box and put it in the back part of the polling room, where there was a pile of hay.

All that is said against Mr. House is that he was unwilling, and did not answer about a collateral matter, a charge of bribery in the Alabama Legislature.

As I have given contestant's evidence quite fully it is but fair that I should give what or the purport of what contestee produces against it. Let us first see what he does not produce. The persons implicated, Croom and Huckleby, are not called and do not swear at all, and do not appear to relieve themselves of such a charge. They knew of the charge, because it was made at the time of the discovery, and being detected they abandoned and did not execute their nefarious attempt. This alone was a confession of the truth of the charge, and yet contestee, without calling these implicated parties, calls only Starkie, a colored Democrat, who says in substance that he carried a goods box over in the morning and not at night, and that there was no other box in it. But no one else explains about this box or undertakes to tell why or for what purpose that was sent over or whether it was ever used or where it was put when it got there.

Robert Lee, a Republican inspector, (colored,) by some indefinite testimony, does not swear, as the minority report states, that the box was not changed, but undertakes only to give some circumstances and facts from which contestee seeks to infer it, says he did not see more than one box there that day; if there was another he did not see it, and that he saw nothing wrong.

The only other testimony to contradict contestant's witnesses are Huggins and Herron, who only show that the box was not changed

so far as they knew. But all they say confirms more than it contradicts the affirmative evidence. I do not see how any fair-minded man can fail to find the facts as I have found them as to the Newbern precinct, in the absence of any contradiction by Mr. Croom and Huckleby, and on such counter-evidence as is adduced. All seem to agree that for some reason the count was abandoned at a certain point after it had begun, and after Mr. House, the supervisor, left. Why was it, unless the fraud had been detected and charged by House, as he says? He had only to watch; the inspectors were to do the counting and could have gone on without him just as well. After the detection they ceased action. The counting of the votes did not go on at any rate and there was no return. The proof as to what the vote cast was is the issue now, and that is not met, and is ample, and this is enough for present purposes.

As to Pope's precinct, in Perry County, which completes the fourteen precincts where regular returns were not made, the proof of the vote cast is not so plenary and is more circumstantial than I could wish; but as there is no contradiction or counter-evidence when there might have been if this was not true, and as a liberal allowance would not change the result, I leave it as stated in the report:

At the election in Pope's precinct, in the county of Perry, contestant shows, by the proof uncontradicted, that there were cast for him 300 ballots, and for the contestee 30 ballots; that after the election was over and the polls closed, and about the time the counting of the ballots cast should have commenced, one of the three inspectors said he was sick, left the polling room, and returned no more that day; the other inspectors, Democrats in politics and supporters of the contestee, refused to count the ballots for either candidate in the absence of the sick inspector, and forwarded the box and ballots uncounted to the board of county supervisors, who were not, under the election law of Alabama, authorized to count the ballots, and neither candidate had the benefit of the ballots cast for him.

Upon the facts as matter of law we hold that the two inspectors might have properly counted the ballots and have made a return of the result to the board of county supervisors in the absence of the sick inspector, but as this was not done, and as each candidate is by law entitled to every ballot for him cast, notwithstanding the omission of the precinct inspectors to count the ballots, it becomes the duty of the House of Representatives to ascertain from the evidence the true state of the vote, and the House cannot be estopped from considering the effect of the proof presented. (Norris vs. Hundley, Forty-second Congress; McCrary on Election Contests, page, 312; *ex parte* Ellyson, 20 Grat. Va., 10.)

Under the proof contestant is entitled to have counted 300 votes and the contestee to have counted 30 votes, being the number of ballots cast for each candidate at Pope's.

I will read one answer of the United States supervisor (Smith) as to this refusal to count and turning the box over without any returns.

Question. What time was it before they, the inspectors, made up their minds not to count the ballots; how many had they counted, and what did they do with them?

Answer. It was between ten and eleven o'clock before they finally concluded not to count the ballots. The inspectors had counted about 46 votes for Smith and 40 for Shelley, and I discovered that the clerk did not mark or tally a ticket for Smith, and I spoke to him about it, and he told me he was attending to that, and they then refused to count any more. The inspectors then put all the tickets back in the box and sealed it up and gave it to the returning officers to take to the sheriff.

It is said that contestant's evidence is contradicted by this evidence of Smith, because he says 40 votes had been counted for Shelley, while contestant's witnesses only gave him 30 in all; and that McDuffie estimates the Democratic vote higher than that as usually cast. This suggestion has little force, as Mr. Smith's evidence tends to show an attempted false count by the Democratic inspectors, and the evidence of McDuffie is not controlling.

I have thus gone over with the fourteen precincts to show the 1,098 majority for Mr. Smith, independently of all questions of fraud except so far as they have been involved in the inquiry to account for the irregularity or want of returns. All these alleged frauds were committed after the votes were cast and the polls closed. If not successful to the extent designed by the perpetrators, they served to defeat a proper return which led to contestee getting his certificate, and in any event leave the way open for proof of the vote cast.

I now proceed to Perry County, where frauds of a different class are proved. I will content myself with stating them succinctly, and not dwell on them:

The election in Marion precinct No. 1, in the county of Perry, was held by the inspectors appointed previous to the election, two of whom were supporters of the contestee, and the proof shows that at that precinct election contestant had cast for him 327 ballots, and the contestee had cast for him about 222 ballots, yet the election inspectors return contestant as having cast for him only 89 ballots, and the contestee as having cast for him 363 ballots, showing a false count against the contestant of 238 ballots, and a false count in favor of the contestee of 141 ballots.

At Cunningham's precinct, in the county of Perry, after the United States supervisor was ejected, there was no opportunity offered to scrutinize the manner of conducting the election inside the polling room, but it is claimed to be shown by proof, uncontradicted, that there were cast for contestant 315 ballots and for the contestee 40 ballots; yet the Democratic inspectors in the return made of the result count the contestee as having received 210 ballots, and the contestant as having received 135 ballots, showing a false count against contestant of 180 votes, and a false count in favor of the contestee of 170 votes. The proof, uncontradicted, shows a fraudulent and false count of the ballots cast.

The Democratic inspectors at Walthall's precinct, in the county of Perry, refused, as at Cunningham's, to permit the United States supervisor to enter the polling room, as provided by the election law of the United States, and therefore he was unable to scrutinize the manner of conducting the election, or to witness the count of the ballots cast for each candidate, so that each candidate for Congress should have the benefit of every ballot for him cast. The rejection of a United States supervisor, commissioned to be present, was not authorized by law. The proof shows that contestant had cast for him at Walthall's precinct 336 ballots, and for the contestee 34 ballots were cast; the inspectors return as the vote for contestant 150 ballots, and for the contestee they return 215 ballots, showing a fraudulent count against contestant of 186 ballots, and a fraudulent count in favor of contestee of 181 ballots.

At Hamburg precinct, in the county of Perry, an offer to bribe the United States supervisor appears to have been made by one of the election officers, and this failing, a fraudulent, false, and stuffed box was substituted for the ballot-box into which the electors had cast their ballots, and a return was made by the inspectors to correspond with the substituted box, as 207 for contestee and 88 for contestant.

The proof shows the number of ballots cast for each candidate to be 338 ballots for the contestant and 40 ballots for the contestee.

At Scott's precinct, in the county of Perry, the United States supervisor swears that one of the State inspectors gave him \$35 as a consideration for changing ballots cast for contestant, by striking out contestant's name on the ballots and writing thereon contestee's name, which was done. The proof taken as to the election at Scott's precinct shows that contestant had cast for him 470 ballots, and that the contestee had cast for him 37 ballots, but when the precinct inspectors made their return contestant is credited with only 196 votes, while the contestee had counted for him 227 votes, showing a false count against contestant of 274 votes, and a false count in favor of the contestee of 190 votes.

Making the necessary allowances for the precincts named in Perry County and treated above, will add 1,128 more votes to that of Smith. In Wilcox County, in the precincts of Bethel, Rosebud, and Canton, the returns were rejected for irregularity, &c. I have not gone through with them and the proof to see how large the majorities for Mr. Smith were, and add them, because it has not become necessary. In other precincts in Lowndes and Wilcox Counties there is evidence of fraud and fraudulent returns. All these the committee pass by without figuring out the enhanced vote which further investigation might give contestant. The case requires no close figuring, as Mr. Smith's majority was so overwhelmingly large as not to render it necessary. I have gone far enough to show a majority of over 2,000 votes at least. The House may stop at the majority of 1,098, which comes from counting the vote of precincts where proper returns were not made. This is proved, even if we make liberal allowances.

I have alluded to and answered as I have gone along most of the objections found in the minority report. Who this minority is I do not know. If it consists of any other member of the committee than the gentleman from Pennsylvania, [Mr. BELTZHOVER,] who seems to father it, I have failed to discover him. It is signed by no one. It is drawn evidently as an attempted answer to the report of the majority after it was printed, in order to make the best show possible for contestee. But still let it be assumed that the other Democratic members of the committee constitute with him the minority, for that will be safe, whether they have ever examined the case and made up an opinion on it or not. At least I am willing to so assume for the purposes of the argument.

Mr. BELTZHOVER. Do I understand the gentleman to say that there is no minority report?

Mr. RANNEY. I said there was one, which is signed by nobody.

Mr. BELTZHOVER. I wish to say that the minority report was regularly presented and voted for by the Democrats present at the time—unfortunately only two were present—there being only four on the committee out of fifteen.

Mr. RANNEY. If the gentleman had heard what I said I think he would not disagree with it. I will and do assume that his Democratic associates did not and will not join in support of the majority report. I do not know that they ever voted against it, except that one of them voted once to make a quorum, saying he had not examined the case and reserved the right to do so afterward. He has not been heard from since. Let him speak for himself now.

I wish to treat the minority report with all fairness and respect. The case was so clear that the gentleman from Texas [Mr. JONES] and the gentleman from Virginia [Mr. PAUL] felt constrained to give their assent to the majority report, and with all respect to the minority, whoever they may be, I must say that I do not see how any unbiased man, how any fair-minded judge, could do otherwise.

The duplex majority report was drawn one part by Mr. THOMPSON and the other by myself, differing only in language and mode and fullness of treatment. Instead of being consolidated they were both sent in together. This much is due in explanation.

There is a general view of this case which I desire to advert to as affecting and furnishing a basis of probabilities, and as a part of history affecting this contest. I read from my report:

From the record testimony in the case, it appears the counties of Dallas, Lowndes, Hale, Wilcox, and Perry make up the fourth Congressional district of Alabama; that the electors of each of said counties are chiefly of the African race, and, as would seem, cast Republican ballots for their party candidates to the extent of from 95 to 97½ per cent. of their vote when permitted to do so; that the electors in each of said counties are largely Republican in politics, and in the district, the five counties combined, have a joint Republican majority of at least 15,000 votes; that the white electors in each county of the district chiefly cast Democratic ballots for their party candidates. (Record, Rapier's ev., pp. 151-155; McDuffie, 211-210; Record, pp. 169, 170.)

The evidence given upon some of the general facts stated above is a matter of opinion, it is true, but the same comes from men apparently well able to judge, and is not controverted by other evidence.

It has been stated, and is notorious as matter of history, as claimed by contestant, that when the Democratic party came into power in 1874 the work of reorganizing the Congressional districts was speedily commenced, the object being to make all the districts Democratic. After the most laborious and careful investigation of this matter it was found impossible to do so, and it was then considered best to put into one district all the large Republican counties adjoining each other, to be called the fourth Congressional district of Alabama. The acknowledged Republican majority in Dallas County was at the State election of 1874 4,957; in Perry County, 2,304; in Lowndes County, 2,953; in Wilcox County, 2,126; in Hale County, 2,606; making a clear Republican majority in the district of 14,946 votes.

At the Presidential election in 1876 Hayes, Republican, received a majority over Tilden, Democrat, of 9,440 votes; and in the same year, in the State election, Woodruff, Independent, receiving Republican support, had a majority over Houston, Democrat, for governor, of 9,115 votes. (Record, p. 170.)

In the Congressional election of the same year Rapier, running as the regular

Republican nominee, and Haralson, running as a bolting candidate, (both persons of the negro race,) the joint majority over Shelley, Democrat, was 6,256 votes. The census returns of 1880 show that there are now in the counties composing the district 135,881 persons of the negro race, and 32,855 white persons, disclosing a very large increase of the negro race, so that on a calculation it may be assumed that there is, in fact, now a majority of 18,000 negro Republican voters over white Democratic voters in the district. (Record, pp. 169, 170, 178.)

It cannot be said that contestee got many colored votes, for his whole vote was less than one-third of the electors in the district, and Mr. Stevens, the third candidate, got at best only 1,633, and was only nominally a candidate. The aggregate vote cast, as pretended, was some 13,000 less than the whole vote of the district, and this at a Presidential election.

There does not appear to have been violence or intimidation, or ballot-box stuffing, as a general rule, but an opportunity for a free ballot was offered when the poll was opened. There seems to have been a disposition to vote on the part of the colored electors when permitted to do so. One instance of their efforts in Dallas County may be mentioned:

The electors came before nine o'clock a. m., to the number of over or about 400 voters, for the purpose of voting, but were discouraged by being informed that an election in the absence of inspectors would be illegal. A delegation of them went several miles to seek legal advice, and after doing so came back and was about to open the polls, and was then informed that they could not do so, because the hour of nine o'clock a. m. had passed, and no election could be held or polls opened after that time; no poll-boxes were furnished or blanks for returns. They then organized, and a list of the names of voters in the precinct was taken, and an expression of preference from each as to his choice for Representative in Congress, and that so registered and expressed their choice as being Mr. Smith, while not one expressed a willingness to vote for Mr. Shelley.

We do not count these in our computation. There was no such division of sentiment as to distract the colored voters and dissuade them from voting. It is charged by contestant, with some apparent truth, that Mr. Stevens was the employé, the hireling for compensation, of the Democratic organization, to play the rôle of a nominee, and bolstered up by them to aid him in that rôle. At any rate he seems to have had but a scanty and weak support, and his candidacy fails wholly to account for the smallness of the colored vote. Mr. Shelley got apparently little more than the white vote, after allowing for the falsified returns and count shown in some quarters. It is not to be supposed that contestant has adduced proof of all the irregularities and frauds committed. He has proved some striking instances, and as none others are proved it would not be right to assume more to exist, significant as they may be of the existence of a want of political honesty in the district, and hard as it is to account for the loss of the Republican vote (13,000) on the returns made of the election. I will not travel outside of the case myself and indulge in wholesale charges against the people of the district or the State. I have no disposition or unkind feeling which would induce such a course.

The wonder has been how a Republican district, with so large a majority, and so made purposely, could be carried each election by the opposite party. Various excuses or reasons have been alleged for it; but this contest may possibly serve to solve the question in the minds of many or most.

I beg leave to introduce and read a statement of contestant in his brief. He was a native of the State, and speaks from apparent knowledge. Let it be understood that I do not indorse his assertions, for I have no knowledge outside of the contests from Alabama which I have examined. I give them as a part of the brief before the House:

It is a most notorious fact that fair elections and an honest count of ballots cast ceased in the fourth district after the year 1876. Bulldozing, intimidation of electors, issue ballots, unfair elections, and a dishonest count of ballots cast became and is the rule. It is a most notorious fact that the statute laws of Alabama in reference to elections are especially enacted with a view to unfair elections, and although glaring frauds, boasting perpetrated, small rank and appear shocking to all fair-minded men of the Democratic party, and although the actors tell their election crimes in public streets and highways, "no guilty man has been punished." Persons of the negro race are chiefly the voters of Republican ballots in the fourth district of Alabama, and Bourbon sentiment runs counter to their right to vote at all, and when permitted to vote the vote is dishonestly counted, the Constitution and laws of the United States, Democratic and Republican political platforms "to the contrary notwithstanding."

Election officers do not respect their oath, nor fear legal punishment. The man who is most highly educated in the art of election frauds, and who can best discover and elegantly execute a new manner of defeating the electors' will, as intended to be declared at the ballot-box, is on the high road to Democratic promotion. The Bourbon Democrat who commits the most glaring outrage on the negro electors at a precinct election, the inspector at a precinct election who falsely counts the ballots cast by the negro electors, the supervisor of election returns who on the most flimsy pretext throws out the returns from a precinct election where the negro Republican vote greatly exceeds the white Democratic vote, is entitled to, and is most certain to have conferred upon him, the "star and garter" of political honor by his Bourbon Democratic leaders for gallant and meritorious conduct in the field of duty; and if any attempt be made to punish such offenders in the courts of the United States they are considered martyrs by a partisan press; county and district Democratic executive committees make collections in money for the expenses of a defense, while leading Democratic lawyers volunteer to proclaim the martyr's innocence.

The House will bear me witness that in discussing election cases I have in no instance gone outside the record of the case to assail anybody or any people, or to make political capital. I shall not do it now, and I come back to the case specifically in hand.

I only ask members of this House to couple these general facts and probabilities with the specific facts proved, and to which I have adverted with the evidence which proves them. I refer to the majority report, especially to my part of the same, as moderate, fair, and judicial, in tone and treatment. If I have seemed to argue the case here and now, it is only because I am called upon to maintain the report

as against opposition and counter assertion on the other side, and a minority report such as we see here. When this case was reported to the full committee, I thought there was one more case in which there ought to be a unanimous report, and that if any member on the other side could justify himself in voting for contestee, I should despair of ever finding a case where he could be convinced that a member of his party should be unseated, provided he held a certificate.

The majority of the committee, in obedience to the evidence and the law, as they believed, have joined with the other side in deciding in favor of a Democratic member, in nine out of sixteen cases determined, have in one case decided against both parties, while six cases have been determined in favor of persons who happened to be Republicans or Greenbackers, and four cases remain undecided. The other side joined in the decision in favor of the contestee in Anderson vs. Reed, but the contestant there was not a Democrat.

Now, sir, I would not mention these facts did not the gentlemen on the other side, in every case which is decided adversely to their political interest, get up here and talk of partisanship, and treat it as impossible that a committee could report honestly and fairly against one of their partisan friends.

At the same time they decline even to take up and consider a case where a report adversely to one of their number is made. The country will judge what the motive and reason of this conduct is. All I care to say now is that here is a case where, in my opinion, there is no debatable ground. If my statement of facts is not verified or justified, let gentlemen get up here and show it by other than assertions and general fault-finding. They talk about men on this side voting without reading the record; let them read this record and the reports, meet us in discussion, and either show that the report is wrong or sustain it and do justice. They talk about following the law and the evidence. Here the evidence and the law are all one way, and not controverted. To vote in favor of contestee they must disregard the law and simply declare that they will believe no evidence which leads to unseating a Democrat from the South, especially if it is given by a colored man.

Before closing I wish to say in justice to the contestee that I do not mean to be understood as implicating him in any frauds proved or charged. From what I have seen and know of him I believe him to be an honorable man and a gentleman and above such things. Neither do I make any general charges against the people of Alabama as a whole. I have no disposition or inclination to do so. The truth is, a few bad men, partisans, take the management of these elections and manipulate the frauds, often while the better people outside know little of them. Fortunately bad men nominate and elect intelligent and good men generally in preference to those of their own ilk.

This House in adjudging these cases have nothing to do with the problem of negro suffrage. It exists in Alabama by virtue of the laws of Alabama. With those laws I have nothing to do. This great problem has got to be worked out. I have my views on that subject, but this is no time to discuss it. Notwithstanding the remarks which we heard yesterday in behalf of South Carolina about the Caucasian race and the barbarian negro, as he was called, while the colored man has the right of suffrage in Alabama equally with the white man, whether illiterate or learned, this House in judging of elections is bound to count his vote and give it its full effect in determining majorities. If what is proved in this case in regard to the state of things in the fourth district of Alabama is true, there is no such thing as a free ballot and an honest count for the colored man there. And it would not seem to be confined to that district, or State either, judging from other cases examined by the committee.

It may be true, and the time may come soon, unless this state of things ends, that Congress will have to pass acts to regulate Congressional elections, and provide a mode of conducting them. Disagreeable as the examination of these election cases has been to me, they have been highly instructive. They are very suggestive of what ought and must needs be done to preserve the purity of the ballot-box, unless the manhood and honor of the people and the dictates of patriotism suffice to cure existing evils.

The laws of Alabama regulating elections seem to be designed and may be well enough for honest men. They are severe in their penalties on fraudulent voters, but not so with the officers of elections. The law prescribes duties as to them, but either light or no penalties, and not such as to enforce obedience or inflict punishment for disobedience.

Mr. OATES. I desire to ask the gentleman from Massachusetts a question. Do I understand him to insist that if an inspector of elections in Alabama perpetrates a fraud in the conduct of an election he cannot be indicted under the State law?

Mr. RANNEY. I do not so state as to all frauds. There may be some kinds which the law does punish. There is no penalty if an inspector neglects to serve, as was done in this case.

Mr. OATES. If he does serve and commits a fraud, does the gentleman say there is no law to punish him for it?

Mr. RANNEY. For some frauds it does prescribe penalties. The gentleman should be more specific as to what kind of frauds he comprehends in his question.

I do not propose to go into an examination of the laws of Alabama. We have nothing to do with them, save so far as they relate to Congressional elections, and to see that elections were conducted in con-

formity therewith in all essential particulars. I am glad to know that fifteen or twenty of those who perpetrated frauds in the election now being considered have been indicted, but I believe it has been done in the United States courts, for violation of Federal laws. They are said to be in no danger in the State courts.

I beg leave to insert in my speech a memorial presented to the Legislature of Alabama, after the election of 1880, relating to the state of the laws and the fraudulent practices in that State, signed by a distinguished and honorable citizen of that State, that will throw more light on the general subject than I can perhaps. He is a man of great intelligence and knowledge, widely known, and is high authority. This memorial was acted upon near the end of the session in the house, which had but one Republican member, but a bill which passed failed in the senate, and the laws still stand unchanged. Not wishing to go outside of the limits of this case in my discussion, I commend to the perusal of the gentleman [Mr. OATES] and to the House the memorial of General Withers referred to, which I will not stop to read:

HONEST VOTERS.

To the Senate and House of Representatives
of the General Assembly of the State of Alabama:

By virtue of the constitutional guarantee of the right of petition, your memorialist most respectfully represents to your honorable body that he is a resident of Mobile, a native of Madison County, and continuously from his birth a citizen of this State; that as a citizen of the State he is entitled to exercise fully, freely, and safely all the rights and privileges guaranteed to that portion of the people recognized by the constitution of the State and the laws made in pursuance thereof; that for the proper exercise and enjoyment of the said rights and privileges it is the province of the law-making branch of the State government, by the necessary and proper legislation, to give to the said electors, and to your memorialist as one of that number, a reasonable assurance of the safe-keeping, correct counting, honest announcement of the result, and faithful official return of the said result of the ballots cast by them, and each of them severally and collectively; that without such reasonable assurance as aforesaid the elective franchise can but be esteemed of too little worth to draw off from their ordinary avocations to the annoyances of the hustings other than the aspirants for office and place, and their paid or expectant agents or assistants, unless a servile public sentiment, is, through cunningly devised methods, so brought to bear on the timid, quiet, peace-loving, and unassuming portion of the electors as to force them to a concealment of their indifference or repugnance, and to the affectation of an interest and zeal in obeying the behests which they have not the manly courage to resist.

Your memorialist further respectfully represents to your honorable body that either from defect in the election laws of the State, or from defect in the so-called registration law, or from want of other necessary and proper safeguards and penal sections, elections in this county, and, as he is informed and believes, and so states, elections throughout the State have ceased to be considered by the electors as furnishing true and faithful expositions of their will as evidenced by the ballots actually cast or deposited by them. Not only so, but your memorialist regretfully makes known to your honorable body that from the declarations and depositions of well-known and reputable citizens and electors conviction beyond question of doubt has been forced upon him that fraudulent tamperings with the ballots cast have on divers occasions been made the means of changing the results of elections as rightly and rightfully decided by the electors.

And your memorialist further represents that such practices have, as is asserted and believed become so habitual as to have seriously impaired if not wholly destroyed confidence in the possibility of any election, which is of sufficient importance to excite the interest of contest, being held and conducted and officially declared with that integrity which does or can give appreciable worth or value to the exercise of the elective franchise.

Your memorialist further respectfully represents to your honorable body that such fraudulent practices can have none other corollary than bribery and perjury, and that when these crimes are justified, excused, or shielded from punishment, there can but prevail a vitiated and vicious public opinion, wholly incompatible with that reverence for law, and of those felt and acknowledged moral obligations which are the safeguards and life of the civilization of Christianity.

Your memorialist is anxiously intent in keeping within the strictest defined limit, legitimately circumscribing the secured right of petition; and therefore respectfully abstains from officious suggestions of possible remedies for the evils complained of, or for guarding against those which may be apprehended from a radical change in the election laws and methods now maintained. Your memorialist is earnestly solicitous to be secured in those rights and privileges for the better security and maintenance of which Washington and Madison, Samuel and John Adams, Franklin and Hamilton united in causing it to be incorporated into the Constitution, that "the United States shall guarantee to every State in this Union a republican form of government;" and your memorialist, deeming it more befitting that he should first make appeal to those immediately invested with the power and authority to give him the proper relief when there is an invasion of his rights and privileges by any departure from or infraction of the spirit of representative democracy, as intended to be so established and perpetuated by the fathers, does now, therefore, respectfully present this complaint; and earnestly appeals to your honorable body for such relief and security in the premises, as to your wisdom may seem just and expedient. And, as in duty bound, your petitioner will ever pray, &c.

JONES M. WITHERS.

MOBILE, ALABAMA, Saturday, February 5, 1881.

No selfish motive, or other than a desire to promote the highest good of the State and country, can be justly alleged as the inspiration of this memorial. The author was not a candidate for office and was in no way connected with this or any other contested election which comes from that State. It was written after the elections were all over. He shows that he is convinced that the laws of Alabama are defective and operate in the interest of fraud, and that frauds had been rife in the past. I commend what he has to say to the deliberate consideration of all fair-minded men, as an answer to the query of the gentleman from Alabama [Mr. OATES] and otherwise. If what he says is true, and what the present case discloses is regarded, the principle of an elective government is ignored and grossly violated in the fourth district and elsewhere in the State. While suffrage is extended in name and form to the colored man, bad men conspire and succeed in practically depriving him of all substantial benefits of the same. "The right preservative of all rights—the right to a free ballot and an honest count," is not maintained as to him and is also denied in its integrity to the great mass of the people.

Rivers and Harbors.

SPEECH

OF

HON. MILTON G. URNER,
OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 25, 1882,

On the report of the committee of conference on the river and harbor bill.

Mr. URNER said:

Mr. SPEAKER: I desire to say a few words in support of the amendment added to this bill in the Senate, providing for "improving the Potomac River in the vicinity of Washington, with reference to the improvement of navigation, the establishment of harbor lines, and the raising of the flats," &c. It has been contended that this amendment does not properly belong to a river and harbor bill, and that the legislation sought should be secured by a separate measure. I confess, Mr. Speaker, I would have preferred and had hoped that the bill for the reclamation of the flats, and the consequent improvement of the sanitary condition of Washington, would have been pushed to a successful issue; but it has not been, and we now find through the liberality of the Senate an amendment which promises partial relief, and I give it my earnest, unqualified support. Why should not the amendment referred to be upon this bill? The title of the bill reads:

An act making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes.

What does the amendment contemplate? It says:

Improving the Potomac River in the vicinity of Washington with reference to the improvement of navigation, the establishment of harbor lines, and the raising of the flats, &c.

Is it not germane to the bill? From the remarks of gentlemen who have preceded me it would be supposed the sole object of this amendment is to raise the flats and improve the sanitary condition of the city. Does not the navigation of the Potomac need improving? Is not that part of the amendment in the interest of commerce? For years Congress has been appropriating money for dredging the Potomac. The mud that has been deposited in the channel of the river has been dredged out, and at the cost of much labor and expense floated down the river on rafts, and yet the channel has continued to become more shallow and navigation more and more obstructed. A distinguished Senator recently said in discussing this proposition:

I cannot understand why a proposition that relates to so great a river as the Potomac and to a port like the port of Washington is not one cognate and proper in the river and harbor bill. Why, sir, have we not here a harbor; have we not here a great river? We once had one of the most magnificent harbors at Washington City upon the whole Atlantic coast. Seventy years ago the water was deep enough for the whole navy of British men-of-war to float in sight of the Capitol of the country.

Forty years ago there were forty feet of water at the navy-yard, and there were twenty-four feet at Georgetown and at the bridge, and now we have not more than four or five feet of water there, and not more than fourteen feet of water at the navy-yard. Forty years ago the largest ships that ever carried the flag of our country across the sea could ride in safety there, and not more than two months since a gentleman's yacht went aground in the harbor. In the old time Georgetown was a great commercial city; Alexandria was ahead of Baltimore as an importing and exporting city. Congress has neglected its navigation. It has allowed the river to fill up by the wash of the country above and by the sewage of this city, until now a fishing smack can scarcely go up this stream to Georgetown.

It has been the neglect of the Government that has destroyed the commerce of Georgetown and Alexandria. It has been the neglect of the Government that has destroyed the health of the city of Washington. In my judgment, since I have been in Congress not less than ten or twelve members of the House and Senate have died of the poisonous malaria inhaled from these swamps. I have been sick myself; I am sick to-day; and the poison comes from malaria brought in every day through the winds that bring us the air that flows over these deadly swamps of the river.

I think the city of Washington and the country generally owe my friend from North Carolina a debt of gratitude for pressing this measure with such persistency in the Committee on Commerce and before the Senate. I hope to see Congress take this river in hand, confine its waters into a channel, and let it scour itself out and make a harbor to a depth of water that shall again invite the largest ships that float up to this point. There is nothing to prevent this. Here is our navy-yard. We build ships here and have no water to float them out to sea. I hope to see the day when these flats will be entirely reclaimed, when the navigation will be opened up to commerce again, and when Alexandria shall be a city of importance as a commercial town, and when the health of this city shall be perfect, and when we shall have abundance of water. I am willing to vote any reasonable amount to accomplish that.

But some gentlemen seem to think there is no commerce here requiring a navigable river. Here they make a great mistake. There are few provisions in this bill of greater merit than this when we look at its commercial aspects alone. There are but three States in this Union—Pennsylvania, Illinois, and Ohio—that produce more coal than the State of Maryland, and every pound of coal produced by that State is furnished by the district I have the honor to represent. According to the recent census the production in 1880 was 2,136,160 tons. That coal must be transported to its eastern markets, and the Chesapeake and Ohio Canal is one of the principal means of transportation, having its western terminus at Cumberland, near the coal fields, and its eastern terminus at Georgetown. In 1874 Hon. A. P. Gorman, the able president of the canal, said in

a statement made to the Committee on Transportation Routes to the Seaboard of the Senate:

The annual tonnage of the Chesapeake and Ohio Canal with its present imperfect connections from only a part of the Cumberland coal basin, and its entire exclusion from the trade of the southern or Piedmont end of the basin, is 1,000,000 tons.

If extended as proposed * * * it is safe to say that at least 3,000,000 tons of coal per annum alone would pass over this canal, at a reduction of not less than \$2 per ton, thus saving to the consumers \$6,000,000 per annum.

In the statement referred to President Gorman, now one of the Senators of my State, in a very clear and able manner shows the feasibility of the extension of the canal to the Ohio River as a great central water-line to unite the valley of the Mississippi with the Atlantic seaboard. When that extension is made the canal will be of much more importance as a means of transportation than at present.

I am indebted to the able and obliging treasurer of the canal company, Benjamin Fawcett, esq., for the following figures, showing the present trade of Georgetown by means of the canal:

The average coal trade of Georgetown for the past eight years is 728,143 tons. The whole tonnage for that time being 5,809,143 tons.

The average value of this coal on board ship at Georgetown would be about \$4.50 per ton.

Annual value.....	\$3, 276, 644
From the above sum the boatmen receive annually about.....	\$725, 000
Canal Company for tolls.....	350, 000
For discharging at Georgetown.....	200, 000
Cumberland and Pennsylvania Railroad for transporting coal to Cumberland.....	300, 000
Miners for digging coal.....	475, 000
Incidental charges.....	250, 000
	<hr/> 2, 300, 000

Netting about \$1.33 per ton to coal companies..... 976, 644

Part of these figures are estimates, but the tons of coal shipped are the actual quantity manifested at Cumberland.

You will see the very large amount of money distributed yearly to a large and industrious class of people, amounting in the aggregate to very nearly two and one-half millions.

The average trade of Georgetown in wheat by canal alone for the past eight years is not less than 450,000 bushels; corn for same time, 215,000 bushels. The average yearly value of this trade is not less than \$750,000. There is also quite a trade to Georgetown by canal in cement, wood, limestone, lumber, building and rough stone, amounting to a probable annual value of \$250,000.

It appears from these figures that the annual trade delivered at Georgetown by canal alone exceeds four millions in value, and at times of high prices will reach much larger figures.

The wheat and corn trade of Georgetown is much greater than that by canal, probably three times as large, as they have a very large wagon trade besides importing large quantities by vessels from North and South.

The canal traverses a great, rich, populous agricultural country whose resources are almost incalculable. This Congress at its present session has authorized another railroad to enter the District of Columbia and have depot accommodations in the vicinity of the Georgetown Harbor, which will very greatly increase the trade and commerce of that port. And yet the channel of the river is suffered to fill up by the dirt and mud washed from the country above, and when Congress is asked to appropriate in a river and harbor bill for the improvement of the navigation of this great and historic river that flows right by the capital of the nation, we are told it should not be done, because while we are improving navigation and promoting commerce we are at the same time beautifying the capital and rendering it more healthful.

Gentlemen can vote without compunction for the improvement of "Buttermilk Channel," "Sheepshead Bay," "Marens Hook," "Muskingum," "Waukegan," "Ahuapee," "Cheesequake's Creek," "Duck Creek," and all the other creeks and rivers "way down to the Suwanee River," but higgles and quibbles when asked to vote for an appropriation for the great Potomac, because when they are regulating commerce they are at the same time promoting the general welfare.

I do not object to these items and shall vote for the bill as an entirety, although I have no doubt some of the items of appropriation might be dispensed with without detriment to the public good. But it is impossible to get a bill that will meet the approval of every individual member in all its details. As a whole I believe the bill is a just one, and shall vote for it. I do not believe there is any bill before Congress that will be so promotive of the general welfare of the country as a river and harbor bill when judiciously drawn.

The general policy of opening the navigable streams of the country and giving the people cheap water transportation I heartily indorse. I believe in a generous system of internal improvements in the interests of commerce and the general welfare. These great works are national in their character and should receive national aid, and while being prosecuted give employment to multitudes of deserving laboring-men all over the country. But the items I referred to do not compare in importance with the proposition to improve the navigation of the Potomac right here at the capital.

By the improvement contemplated it is proposed that instead of carrying the mud obtained in dredging the river down below Alexandria, as heretofore, it shall be deposited upon the flats near by, thereby filling them up and reclaiming them and obtaining for public uses a large tract of valuable land.

I think I have shown that commercial interests are to be served by the improvement contemplated, but I would favor it independent of the commercial aspects of the question. I am glad I have not become afflicted with narrow views concerning the wants and demands

of this District. I represent a constituency who are broad-minded and generous, and I have always tried to reflect their sentiments upon all public questions here. I recognize this city as the capital of a great nation numbering at present fifty millions of freemen and soon to be a hundred millions, and I would by wise and generous legislation so promote the public weal here that all the waste places should soon be reclaimed and made to blossom as the rose.

Washington should be, as I trust it is rapidly becoming, not only worthy of him whose name it bears, but the pride of every American as the most beautiful city of the world.

The gentleman from Georgia [Mr. BLOUNT] seems to think this city needs no sanitary improvement, and quotes some figures from the American Almanac for 1882 to show there are some American cities whose rates of mortality are greater than those of Washington. But he failed to tell us that by the book from which he quoted it appeared that in 1880, of thirty-three principal cities named, in nineteen of them the rate of mortality was less than in Washington.

In 1879, of thirty-two cities named, the rate of mortality was less than here in all except four. In 1878, of twenty-seven cities named, the rate of mortality was less than in this city in all except four; and in 1877, of thirty cities named, the rate of mortality was less in all of them, except three, than in Washington. It is not contended that all persons die who sojourn here, nor is it claimed that the capital of the country is the most unhealthful of all the cities of the land. Would gentlemen have it so before they will be willing to grant relief?

One thing is certain, and that is the flats are an eye-sore and disgrace to the city. They are a nuisance upon grounds belonging to the Government of the United States, and it is the duty of Congress to abate them. The people of the country expect it, and the citizens of this District demand, as they have a right to, that the United States, having exclusive legislative control here, shall not by the non-action of Congress maintain a nuisance. These flats are offensive to the sight, offensive to the smell, and by their foul, miasmatic emissions cause malaria and death.

But some gentlemen say we propose at the expense of the Government to improve private property. Certainly those who interpose this objection have not examined the question. The amendment makes it the duty of the Attorney-General to see that the rights of the Government are in all respects secured and protected. The only pretended claim of title to any portion of the land proposed to be reclaimed is that known as the "Kidwell Bottoms." I shall not attempt now a discussion of this claim, but shall embody in my remarks a letter and memorandum from the Commissioner of the General Land Office which give the history of the issuance of the patent under which a title is claimed adverse to that of the United States:

DEPARTMENT OF THE INTERIOR,
GENERAL LAND OFFICE,
Washington, D. C., April 18, 1882.

SIR: The patent to John L. Kidwell for the Kidwell Meadows, so called, containing 47.71 acres, lying south of the National Observatory, and extending from opposite Twentieth to Twenty-sixth street west, appears from the records of this office to have been issued under the provisions of the joint resolution of Congress of February 16, 1839, (5 Stats., 365.) The proceedings relative to this application and payment for and the survey and patenting of this tract were under regulations prescribed by the Secretary of the Treasury in August, 1839, for carrying said joint resolution into effect.

The joint resolution related to certain acts of the Legislature of Maryland respecting titles to vacant lands which were in force in the District of Columbia by virtue of the provisions of the act of Congress of February 27, 1801, (2 Stats., 103,) continuing in force the laws of the State of Maryland within that portion of the District ceded by said State to the United States.

The laws of Maryland prescribing the method of securing titles to vacant land, and which were operative in the District of Columbia as above recited, were, among others, the acts of November, 1781, chapter 29, and November, 1788, chapter 44. The act of 1781, "to appropriate certain lands to the use of the officers and soldiers of this State, and for the sale of vacant lands," was construed to mean that all lands within the State in Washington County westward of Fort Cumberland were appropriated to discharge the obligations of the State to officers and soldiers, and the residue after completing that engagement to the use of the public. (Kiltz's Land-Holder's Assistant, page 308.) The thirteenth section of the act of 1788 removed the limitations of the former act and made all vacant land in the State, as well westward of Fort Cumberland as elsewhere not affected by outstanding warrants, subject to be taken up in the usual manner by warrant at the price of three shillings and nine pence per acre. (*Ibid.*, 315.)

The warrants referred to were orders of survey to be issued on the order or "titing" of the Treasurer, and were restricted by the third section of the act of 1781 to vacant cultivable lands, the technical phrase being "warrants of vacant cultivation." (*Ibid.*, 309.)

The joint resolution of Congress of 1839 authorized certain officers therein named to perform the duties which had been required of State officers under Maryland laws, and empowered the Secretary of the Treasury to make the necessary regulations to carry the Maryland acts into effect. It was provided in the joint resolution that "any land which may have been ceded to or acquired by the United States for public purposes shall not be affected by said acts."

The Treasury regulations defined the proceedings necessary in obtaining titles to land under said joint resolution. Assuming that these laws and regulations authorized and provided the means of securing individual titles to islands, flats, and marshes in the Potomac River within or adjacent to the city of Washington, several applications for orders of survey were made from time to time, which were granted, but under which no surveys were executed. These orders provided that the lands to be surveyed must be firm land not subject to tidal overflow. In some instances surveys were returned, but were rejected by the Commissioner of the General Land Office on the ground that the land was submerged by tidal flow, and was therefore not subject to survey and disposal under the Maryland acts and joint resolution of Congress. The application of Mr. Kidwell for a patent for the so-called "Kidwell's land," being the bar on the upper side of the Long Bridge, was rejected for this reason.

On September 10, 1867, Mr. Kidwell applied for a warrant of survey for the tract known as "Kidwell's Meadows," and which was described in the application as

an island in the Potomac River, between Washington City channel and the swash channel, commencing nearly opposite Fifteenth street west and extending to a point where D street north strikes the canal or river. The order of survey was issued September 12, 1867, and its execution was made subject to the usual provision that the land to be surveyed should be "firm land and not subject to tidal overflow." The survey was returned by the county surveyor October 19, 1867. An examination of this survey was deemed necessary, and Mr. S. J. Dallas, principal clerk of surveys in the General Land Office, was designated as examiner-general for this purpose. Mr. Dallas made the examination, and on February 28, 1868, reported to the Commissioner of the General Land Office that he found the premises to be under the ice in the Potomac River, presenting no appearance of land, but submerged and subject to tidal overflow, and "of course not fit for vacant cultivation," as required by the third section of the act of 1781. He also found that the survey had been "returned in total disregard of the law and of the instructions embodied in the warrant of survey." The survey was accordingly rejected.

On October 17 and 24, 1869, a re-examination was made at the request of Mr. John Wilson, attorney for Kidwell, and upon this re-examination the examiner-general rescinded his former opinion and approved the plat of survey. In this re-examination, made under more favorable conditions than the examination in the original instance, he found the "Kidwell Meadows" to be from three and a half to four feet above low water, and from a foot to a foot and a half above ordinary high water, as near as he could judge, owing to the density and vigorous growth of wild rice and other weeds which impede a clear view of all parts of the meadows. He did not think the land fit to produce successful crops of corn, but thought it susceptible of producing fodder and affording pasture for cattle.

Upon the re-examination and the approval of the plat of survey by the examiner-general, patent was issued to Mr. Kidwell December 6, 1869. The amount paid for this tract was \$23.86, or fifty cents per acre.

In reference to this patent, and to similar applications, Mr. Commissioner Drummond, in a letter to Mr. A. R. Shepherd, dated January 22, 1873, said: "All applications made since I assumed charge of the Land Office in February, 1871, have been refused for the following reasons:

"1. Because the land was subject to every-day's overflow by tide-water, and therefore not in a condition to be surveyed.

"2. Because I thought that the disposition of the land was not clearly authorized by law.

"3. Because I did not deem it proper to dispose of lands situated in the immediate vicinity of Washington, at a nominal sum, to private parties who could hold and use them so as to impede and obstruct harbor improvements, unless the law clearly and imperatively made it my duty to do so."

The foregoing statement comprises the facts of record in this office relative to the patent issued to John L. Kidwell for the "Kidwell Meadows," so called.

The brief time I have for the consideration of the subject does not permit me to express an opinion upon the legal points involved in the case.

Very respectfully,

N. C. McFARLAND, Commissioner.

Hon. M. W. RANSOM, United States Senate.

MEMORANDUM.

The title of the United States to the bed of the Potomac River through the District of Columbia was derived from the cession of jurisdiction by the State of Maryland.

The United States has such title to the soil under the navigable waters of the Potomac River within the District, and to the islands, flats, bars, and marshes in said river, as the State of Maryland had.

The alienation of the sovereign title to the shores of navigable waters and the soil under them, or the disposal of the flats, bars, and marshes within such waters, was not authorized by the general land acts of the State of Maryland.

The laws of Maryland providing for the disposal of vacant lands, and which were adopted by Congress for the District of Columbia, authorized the disposal only of lands of a certain defined character.

The United States could dispose only of such lands within the District under those laws as the State of Maryland could have disposed of prior to the cession under those laws.

If the tract now in question could not have been disposed of by the State of Maryland under the act of 1781, it could not legally have been disposed of by the United States under the joint resolution of Congress of 1839.

The land that could have been disposed of under the general land acts of Maryland was land suitable for occupation and cultivation. It was not land that by the accumulations and hardening of future years might become suitable for cultivation, but land actually cultivable. The term "vacant cultivation" as authoritatively construed, implied unappropriated land that could be cultivated.

If the "Kidwell Meadow" was in 1869 a strip of marsh in the Potomac River, subject to overflow by tide-water, it was not cultivable land authorized to be disposed of by the Maryland acts and the joint resolution of 1839.

If the land was not of the character authorized to be surveyed by said laws, and the instructions issued thereunder, that is to say, if it was not "firm land and not subject to tidal overflow," its survey in 1867 was illegal and the approval of said survey in 1869 was without authority.

The public land laws of the United States are not operative in the District of Columbia, and the disposal of land, the property of the United States therein, can only be made by special authority of Congress. Patents for lands in said District cannot issue without express provision of law.

If the patent to Kidwell was not for land authorized to be disposed of by the Maryland acts and the joint resolution of 1839, its issue was without authority.

The land must also have been vacant, unappropriated land. The Maryland acts contemplated only the disposal of lands of such character. It was further provided in the joint resolution that "any land which may have been ceded to, or acquired by, the United States for public purposes shall not be affected by said acts."

The Potomac River in its course through the District is appropriated to the public uses of navigation. The alienation of the title of the United States to the flats, bars, and marshes therein would impair those uses by impeding harbor improvements and interfering with the removal of obstructions.

The United States is the proprietor of the land adjoining the Kidwell Meadows, so called, having acquired the same for the uses of the Naval Observatory and other public purposes.

The land in question is of alluvial formation. If in 1869 it had been raised above low water mark by gradual accretion, it had become attached to the adjoining property through riparian rights, and would for that reason have been taken out of the class of lands subject to the operation of the Maryland acts and the joint resolution, first, because the title to the adjoining property had passed from the State of Maryland to private proprietors prior to the cession, and second, because of the public uses to which the adjoining property had been dedicated by the United States.

The segregation of such land and its disposal at private sale would have required special authority of Congress, without which an attempted sale by the executive officers of the United States would be void.

The patent to Kidwell can be sustained only on the following propositions:

First. That the land was firm cultivable land in 1869.

Second. That it was above high water mark at that date and not subject to tidal overflow.

Third. That it was unappropriated to any public purpose.

Fourth. That it was separated from the mainland by a navigable channel, and was an island in fact and not an accretion to the mainland.

Fifth. That it was without the municipal jurisdiction of the city of Washington.

Sixth. That the acts of Maryland and the joint resolution of 1839 contemplated the disposal to private persons of the islands, flats, bars, and marshes in the harbor of Washington.

Unless each and all of the foregoing conditions are met the patent to Kidwell was issued without proper authority.

But whether said patent was issued without authority, or whether it is voidable by reason of fraud or mistake, or whether it conveys a valid title to the land, are questions that can of course only be determined by the courts.

In conclusion, Mr. Speaker, whether we look at this question from a commercial or a sanitary point of view it alike challenges our earnest support. There is no provision in the bill of greater merit. There are many items in the bill for the improvement of places of such obscurity that the average member of Congress is only reminded of their existence when he reads their names in the river and harbor bill, and in whose improvement only one member and his constituents have any considerable direct interest. But when we improve the capital of the nation we improve that in which all the people of this broad land have a common interest, and I trust a common pride. Let us then not be parsimonious in our dealings with this District and this city. Let us make Washington, this "only child of the nation," as its founders intended it should be, not only a place of national convenience but of national pride.

Smalls vs. Tillman.

SPEECH

OF

HON. JAMES F. BRIGGS,

OF NEW HAMPSHIRE,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 19, 1882.

The House having under consideration the contested-election case from South Carolina—

Mr. BRIGGS said:

Mr. SPEAKER: I do not expect, in the limited time allotted me, to cover the whole field of debate. This contest comes from the fifth district of the State of South Carolina. That district is composed of six counties, namely: Colleton, Beaufort, Barnwell, Edgefield, Aiken, and Hampton. The evidence in this case is embraced in this volume which I hold in my hand, of nearly 800 pages, which I have thoroughly examined from beginning to end, to enable me to reach a correct conclusion upon this question. That examination discloses a series of election frauds and outrages of the most frightful character.

There is no complaint made in relation to the county of Beaufort, but as to the other five counties in many instances the county canvassers and the precinct managers paid no regard whatever to the provisions of the State laws and trampled under foot the laws of the United States relating to the duties of supervisors of elections. I hold in my hand a list embracing some twenty precincts where these laws of the United States were utterly disregarded, and where these officers by violence and intimidation were prevented from the performance of their duties. The fourth section of article I of the Constitution is as follows:

The times, places, and manner of holding elections for Senators and Representatives, shall be prescribed in each State by the Legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

Under this grant of power the Congress of the United States has enacted what are known as the election laws, providing in certain instances for the appointment of supervisors of elections. These laws were invoked in this Congressional district, and supervisors were appointed to perform the duties prescribed by law at the several precincts therein. These officers were there for the purpose of securing an honest and a fair election of a member of this House. They were in fact the eyes and ears of this House, to see and hear and note all the transactions that occurred from the opening of the polls until the votes cast were counted and returned, and having been prevented from the performance of those duties by the means before alluded to and which I will hereafter more fully describe, I claim that it is the duty of this House to take the ground, in this case and in all other cases of contested elections, that in any precinct, whether it be in the North or in the South, where the authority of this law is defied and these officers prevented from the performance of the duties therein prescribed, the vote of such precinct shall be treated as fraudulent and illegal and ought not to be counted.

I have not time, sir, to go through with the evidence as to all of these precincts in detail, but I will state briefly that this condition of things existed in many of the precincts of the five counties to which I have alluded. The evidence contained in this record is clear, explicit, and uncontradicted, and I desire to call your attention to a few precincts where these frauds were practiced, and in doing so I

prefer to let the witnesses describe the same in their own language rather than to embody them in my own.

HAMPTON COUNTY.

As to Brunson precinct, in Hampton County, the United States supervisor, E. A. Brobham, testified as follows:

Question. Where were you on the 2d day of November last?

Answer. At Brunson election poll; acted as United States supervisor of election.

Q. Was the election quiet and orderly?

A. It was not. On the evening previous to the day of election several crowds of mounted red-shirts rode into the town of Brunson. Directly after dark they gathered around the depot of the Port Royal and Augusta Railway. They whooped and yelled, hurrahed for Hancock, and cursed Garfield. They fired off guns and exploded powder under an anvil, which explosion sounded like a cannon, and was heard many miles from here. They kept up this shooting all night, and until near sunrise the next morning. I went to the poll at about daylight, and found a great many Democrats there, many of whom seemed to be under the influence of whisky, and seemed to have taken charge of the poll. It seemed to be the purpose of the Democrats to make as much show of violence and force as possible, but not to hurt any one; but when they got their men drunk for the purpose, they could not control them. They knew that the Republicans, having been run over with horses, beaten with sticks, and shot with pistols at this poll on election day in 1878, would be afraid to come to this poll if there was any disturbance about it. They kept threatening to come to my house, which is about one hundred and fifty or two hundred yards from the depot, "and break in on me."

A prominent Democrat sent a colored man to my house with a message to me, saying that I had better go away from home; that those men at the depot had just agreed to come to my house after me, and that if they found me there they would injure or kill me. Two other Democrats came to my house, a few minutes after, and advised me to leave. I told them that I would go, but my family was here. I had no where to take them and would stay with them if I got killed. Shortly after this a crowd came; called to my gate, and said that they wanted to see me. I refused to go out and they left. A few minutes later another crowd came. They came in my yard and knocked at my bed-room window, insisting that I should get up, that they wanted to see me. I refused to get up. They talked to each other a while, and left. I heard one say "Let's go in;" another said "No." After the poll opened the Democrats whom I found there early in the morning kept up a good deal of noise, appearing to be drunk, and behaved very disorderly.

The poll was held in a back room of an old store. The voters had to pass through this old store to get to poll. This old store was full of this disorderly crowd of Democrats nearly all day. No voter was allowed to enter without their consent. Whenever a Republican would appear to the door for entrance they would crowd into the door, yell and jeer at him, and very often they would hold sticks across the door and would not allow the Republican to enter. In several instances Captain John H. Lightsey had to order the door cleared before the Republicans could get in. These blocking the door were mostly by members of Captain Lightsey's red-shirt cavalry company. Captain Lightsey testifies that he came to the poll directly after midnight, and I think he brought his company with him.

After the Republican voter got into the room the Democrats would ask him all sorts of questions, thereby detaining him, worrying him so that several turned and went out and did not vote at all. I noticed one Republican who tried to press through and get to speak to the managers. As he got to the box several Democrats caught and tried to pull him back; he held on to something and they commenced beating him on his head with clubs, and he turned and ran out. They would not allow more than one Republican to enter at the time, and it required considerable nerve to go in to the poll under the circumstances. Several Republicans turned back at the door, and some who entered was so worried that they came out before they got a chance to vote, and never returned.

Q. Was the election fair?

A. It was not; it was as unfair as it could possibly be. The commissioners and managers of election were all Democrats. I, as chairman of the Republican party, applied to the county election commissioner for one Republican on each board of three managers, but did not get one appointed. The Democrats voted two and more tickets folded together, thereby stuffing the box so that a very large excess had to be drawn out and destroyed, which gave them a chance to destroy nearly all the Republican ballots. After throwing out all the ballots that they were certain had been voted inside other ballots, they had 588 ballots against 350 names on the poll list.

As to Beach Branch, in Hampton County, Frank Saxson testified as follows:

Question. Where were you on the day of the last general election?

Answer. At Beach Branch poll.

Q. What was your official position at Beach Branch, if any, on that day?

A. A United States supervisor of election.

Q. Was the election peaceful and quiet?

A. No.

Q. Was you allowed to discharge your duty as supervisor peacefully and quietly without hindrance or obstruction?

A. No.

Q. State in what manner, then, you were prevented from doing so?

A. The managers of the election refused to allow me to act as supervisor without going first to a trial-justice and be sworn.

Q. Had you been sworn; and, if so, before whom?

A. Yes; before E. A. Brabham.

Q. And you say you did not act as supervisor?

A. No.

Q. Did you go into the house where the poll was kept?

A. Yes; but when I told them that I had been sworn already, and that I would not go to the trial-justice to be sworn again, they ordered me out of the house.

Q. Did you make any attempt to remain in the building?

A. Yes; I did not go out until I saw that they were going to put me out by force.

Q. Who were the managers of election?

A. Richard Johnson, John Griner, and Dr. W. T. Breland.

Q. How did you know that they would put you out?

A. They said they would do it if I did not go out. Mr. Johnson said that if I was allowed to act as supervisor he would not act as manager, and they stopped the election, and seemed to be in the act of preparing to put me out. I was afraid that if I did not go out they would hurt me.

Q. Was any Republican ballots cast at that poll on that day?

A. No.

As to Stafford's Cross-Roads, in Hampton County, Benjamin E. Taylor testified as follows:

Question. State your residence.

Answer. Stafford's Cross-Roads.

Q. Your occupation?

A. Am farmer.

Q. Where were you day of last election?

A. Stafford's Cross-Roads.

Q. Did you hold any public position?

A. I was supervisor.

Q. Did you meet with any trouble in your duty?

A. Yes; the box was opened, and I was there to examine and see it was opened decently.

Q. Was you inside the building?

A. Was not.

Q. Why was you not inside?

A. Poll was opened in a gin-house that belonged to C. H. Wilcox; place was in charge of Henry Holcome, the manager, and one had poll list; went inside house with the box and set it there and closed the door by putting box in door, thus preventing my going inside.

As to Lawtonville, in the county of Hampton, it is impossible to obtain the testimony of Edmund Glover, the supervisor at that poll, as he has not been seen since the day of election, and to-day he probably sleeps in an unknown and an unmarked grave. The testimony of Erasmus Black, who was an eye-witness of what occurred there, describes what he saw, and I will let him speak for Glover:

Question. Do you know the name of that supervisor?

Answer. Edmund Glover.

Q. Do you know whether or not he remained in the room all day from six o'clock a. m. till six o'clock p. m.?

A. No; he remained there till the row commenced—four o'clock in the evening.

Q. Do you know whether or not he returned after coming out of the room at four o'clock?

A. No; I saw two of the Democrats leading him down. The Democrats were dressed in red shirts. I saw them leading him down the steps.

Q. How do you know that he did not return?

A. After they led him down the steps he went across the field and took to the swamps to save his life.

Q. Did this number of Republicans that you say were there vote?

A. Yes, sir; they were voting until the row commenced.

Q. Did Glover live in Lawtonville precinct before the election?

A. Yes.

Q. What was he doing there?

A. He was teaching a public school.

Q. Do you know that he lives at the same place?

A. He does not live there now.

Q. Do you know what has become of him?

A. No.

COLLETON COUNTY.

As to Snider's Cross-Roads, in Colleton County, Thomas L. Martin testified as follows:

Question. Where do you live; in what county, and where were you on the 2d day of November last?

Answer. I live in Walterborough, Colleton County; was at Snider's Cross-Roads on the 2d day of November last.

Q. Was the polls opened at the usual hour?

A. I don't think it was. I staid about a quarter of a mile from the polls, and started at a quarter after five, and when I got there the managers had voted twenty-one persons.

Q. Then by your time the polls must have been opened about six o'clock?

A. Yes.

Q. You were the Republican supervisor, were you not?

A. Yes, sir.

Q. Did the managers swear the voters at that poll?

A. They did not.

Q. Was there much disorder at the polls, and were there threats made against the Republicans?

A. There was a great deal of disorder all day long caused by drunkenness. As to threats, they remarked that they could kill a Radical as easily as they could drink water; and they also threatened to throw me out, and did lay their hands upon me.

Q. Were you prevented from keeping a poll list there that day?

A. I was.

Q. Did you try to keep a poll list?

A. I did.

As to Smoke's Cross-Roads, in Colleton County, Thomas C. Smith testified as follows:

Question. Where do you live; in what county, and where were you on the 2d day of November last?

Answer. I live in Walterborough, Colleton County; was at Smoke's Cross Roads on the 2d day of November last.

Q. What time did you go there; how long did you remain; and, if you left, why did you leave?

A. I got there half past five o'clock a. m., and left about three o'clock p. m. I left in fear of my life from violent threats that were used against me as supervisor, claiming that I had no right there, saying that I was only there to interfere with their election and have men reported to the United States court.

Q. Were these threats made by the supporters of Tillman and the Democratic ticket, or by Republicans?

A. They were made by the supporters of Tillman—the Democratic candidate.

Q. Were the managers Republicans or Democrats?

A. Democrats.

Q. Then you do not know of your own knowledge the number of votes legally cast at that poll?

A. No, sir.

Q. In consequence therefore of the violence and threats made there, were you or were you not prevented from keeping a proper poll list, and from acting and performing your duty as United States supervisor?

A. I was.

As to Carter's Ford, in Colleton County, P. S. Robinson testified as follows:

Question. Were you not the Republican supervisor at that poll?

Answer. I was.

Q. Were you able to keep a poll list and keep the names of all the voters at that precinct?

A. I was not.

Q. Did you or any Republican have access to the box for half an hour after the closing of the polls at the count?

A. I did not.

Q. Then no Republican had an opportunity to see the box immediately after the closing of the polls?

A. They did not.

Q. Do you know whether David Walker, Christopher Carrol, Stephen McMillin voted that day at Carter's Ford?

A. I do not, of my own knowledge.

Q. Do you know of any other irregularities that day committed by the managers of election? If so, state them.

A. There were men to my own knowledge who voted stuffed tickets.

Q. Were these men Democrats or Republicans?

A. Democrats.

As to Maple Cane, Colleton County, W. W. Tromer testified as follows:

Question. Where do you live, in what county, and where were you on the 2d day of November last?

Answer. I live in George's Township, Colleton County, and was at George's Station on 2d day November last.

Q. At what time did you arrive at George's Station, and where did you go to find the poll?

A. I arrived here at four o'clock a. m., and came to the town hall, where the voting was held in 1878.

Q. You were the Republican supervisor, were you not?

A. I was.

Q. Did any of the officers of election come to that place; and, if so, who were they?

A. They did; George Rump, one of the managers, and S. E. Parler, supervisor of the Democrats.

Q. Do you know whether or not the manager brought a box with him?

A. George Rump had something under his coat, and came in the door and said, "Move out of the way." I took it to be a ballot-box; unable to say if it was or not.

Q. Did you at any time demand of the manager the opening of the polls; and, if so, at what time?

A. I did, at six o'clock a. m.

Q. What did he say?

A. He said that he could not open it without the rest of the managers were there; he stated that he was not the chairman.

Q. Was the polls opened at that place; if not, how far from that place?

A. About a half a mile from that place.

Q. How long was it after six o'clock before you knew where the polls were opened?

A. By my watch it was a quarter after six a. m.

Q. Did you leave the town hall and go where the polls were opened?

A. I did immediately.

Q. When you arrived there how many votes did the managers claim to have received?

A. Seventy-five.

Q. Did you ask to see the ballot-box and the names on the poll list?

A. I did, but the managers refused to allow me to see them.

Q. Then they refused either to give you the names on the poll list or to see the ballot-box?

A. They did.

Q. Is this a Republican or Democratic poll; and if a Republican poll, by what majority is it generally carried?

A. Yes; about 400 Republican.

Q. By what majority, if any, did the Democrats claim to have carried this poll?

A. I think about 350.

Q. Do you believe that the ballot-box was stuffed before you arrived at the polls?

A. I do, sir.

Q. If the box had not been stuffed by Democratic ballots, and the votes properly canvassed, by how many majority would the Republicans have carried this poll?

A. They would have carried from 350 to 400 majority.

Q. Were there more ballots in the box even at the closing of the polls than there were names on the poll list?

A. There were.

Q. Did the Democratic managers destroy any of the Republican ballots?

A. They did.

EDGEFIELD COUNTY.

As to Johnson's Store, Edgefield County, Willis Gomillion testified as follows:

My name is Willis Gomillion; age, 22; occupation, farmer; and live in Edgefield.

Question. Were you in Edgefield on the 2d day of November last?

Answer. Yes.

Q. Were you at any particular precinct; and, if so, in what capacity?

A. At Johnson's precinct, as a supervisor for the Republican party.

Q. Did you discharge your duty as supervisor?

A. Yes; until about 2.30 p. m.

Q. Why did you not continue to act?

A. I was seized by a red-shirter, who said to me, "God damn you, go down from here." There being no protection for me, I went down and did not return, because I was afraid to do so.

Q. Afraid of what?

A. I was afraid that the Democrats would hurt me. After I went down and got about thirty or forty yards I was overtaken by the same gentleman and two others, who requested me to stop and told me to come back and go with them. I asked them where; they said, "On our side." I declined. About that time I was surrounded by red-shirter; I don't know how many. Some of them said that they would assure me that I would not be hurt—"Come and go back." I then discovered or saw Anthony Miles lying dead a few steps off, and I thought that I had better get away.

Q. How came he dead?

A. He was shot by some one just above his eye with a ball.

As to Edgefield Court-House, Edgefield County, Jesse Jones testified as follows:

Question. State your age, residence, and occupation.

Answer. I am twenty-eight years of age; reside in Edgefield Court-House, and am a farmer.

Q. Were you in Edgefield polling precinct on the day of the last election; if so, in what capacity?

A. I was, as United States supervisor.

Q. Did you serve?

A. Yes, sir.

Q. At what time did the poll open?

A. At six o'clock a. m.

Q. Did you see the box opened prior to the voting?

A. I did.

Q. Was anything in it?

A. There was not.

Q. Where was the box placed?

A. Inside of the court-house, in the court-room, within the railing, about fifteen feet from the door; there is a passage-way about four feet long from the porch door to the court-room door.

Q. How wide is the porch?

A. About four or five feet wide.

Q. When the poll opened, how many people, and to what parties did they belong,

who were inside in the polling place, other than the managers, clerk, and supervisors?

A. When the poll opened there were no others inside the rail; but about twenty or twenty-five in the room; all Democrats.

Q. At what time did you arrive at the poll?

A. About half past four o'clock.

Q. Were any persons in the court-house then, on that floor?

A. Yes, sir.

Q. Do you know how many, and who they were?

A. I suppose about one hundred were in there; all Democrats.

Q. When the poll opened were there any persons in the room where the box was in uniforms of any kind, or with arms of any description?

A. There was, Democrats with red shirts; I suppose about ten or fifteen with arms, and about forty or fifty with red shirts on; some had double-barrel shot-guns, some pistols.

Q. Were any persons within the rail with uniforms?

A. No, sir.

Q. Were any persons within the rail who had arms?

A. There were arms inside the rail, leaning in the prisoners' box, about a foot from the ballot-box.

Q. What kind were they, and to whom did they belong?

A. There were three double-barrel shot-guns; I cannot say who they belonged to.

Q. How long did these guns remain there?

A. I suppose about two or three hours.

Q. Who removed them?

A. I saw some gentlemen come in and take them out.

Q. Do you know who caused their removal?

A. It was caused by some man who drew a pistol on the street raising a row; they were taken out by parties who were in the room.

Q. Were the parties who took them out election officers?

A. Yes, sir.

Q. What officers were they?

A. The Democratic supervisor.

Q. Do you know if either of these guns belonged to or was in custody of either of the managers, or the clerk?

A. I cannot say.

Q. How many doors between the porch and the ballot-box?

A. Two.

Q. Were these doors kept open all day?

A. The outside door was a double door, each of which was about a foot and a half wide, only one side of which was open; the other side was closed; the inside one was a gate to the railing, which was kept open.

Q. Did you keep a poll list?

A. No, sir.

Q. Why not?

A. I did not think it was safe for me to do so.

Q. Why did you think it unsafe?

A. Because if they saw me keeping a poll list. I don't think they would have allowed me to stay there at all, as I was told by Democrats that if I attempted to make a report I would not be allowed to act as supervisor.

As to Mount Willing, Edgefield County, George Valentine testified as follows:

Question. Were you at Mount Willing on the day of the last election?

Answer. Yes, sir; I was there.

Q. In what capacity?

A. As United States supervisor.

Q. What time did you get to the poll?

A. The sun was a quarter of an hour high.

Q. Was the poll opened when you arrived?

A. Yes, sir.

Q. Were there many people about the poll then?

A. Yes, sir.

Q. Democrats or Republicans?

A. There was some of both.

Q. Was everything quiet then?

A. Yes, sir.

Q. Did the managers tell you how long the poll had been opened, or how many people had voted?

A. No, sir.

Q. Did you keep a poll list?

A. No, sir.

Q. Was that door free?

A. The red shirts stood around the door with clubs and pistols keeping the crowd back, and letting them come in six at a time.

Q. Was any discrimination made between the voters in admitting them?

A. The Republicans were kept back and the Democrats admitted.

Q. Were any Democrats kept back?

A. Every now and then if a crowd of Democrats tried to get in and if the house was full they would keep them back.

Q. Were many persons inside the house during the day?

A. Yes, sir.

Q. To what political party did these persons belong?

A. The Democratic party.

Q. Were any Republicans there?

A. None but myself, except when they came in to vote.

Q. Did any attempt to remain in the house after voting?

A. No, sir.

Q. Were the managers Republicans or Democrats?

A. All Democrats.

Q. Did you remain all day?

A. No, sir.

Q. Why not?

A. When the row took place I got out.

Q. What time was this?

A. Between two and three o'clock.

Q. What caused the row?

A. There came up a crowd of Democrats and commenced beating the colored people with clubs and sticks, and one pistol was fired; after the first pistol was fired there was a great deal of shooting, and the colored people ran home.

Q. Did all the colored people go away?

A. There was about a dozen staid around there until sundown, knocking around.

Q. How many went away at the time you did?

A. About one hundred and eighty or one hundred and ninety.

Q. Why did you not remain?

A. Because I was afraid they were going to kill me.

Q. Did you go away or did you leave before or after the firing?

A. I went at the time of the firing.

As to Cheatham's Store, Edgefield County, Bristow Yeldell testified as follows:

Q. Were you at Cheatham's Store precinct at the last election?

A. Yes, sir.

Q. In what capacity?
 A. As United States supervisor.
 Q. Were you present when the polls opened?
 A. I was.
 Q. Did you act as supervisor that day?
 A. No, sir.
 Q. Did you see the box opened by the managers before the voting commenced?
 A. I did not.
 Q. Why not?
 A. Because the Democrats were fighting a sham battle on the piazza, and I was afraid to go to the box.
 Q. Did you go into the poll at all?
 A. I did not.
 Q. Being supervisor, why did you not?
 A. I was objected to coming in by one of the managers.
 Q. Did you stay at the poll all day?
 A. I did not.
 Q. Did you see the votes counted?
 A. I did not.
 Q. How many people were at the poll when it opened?
 A. About one hundred Republicans and about twenty-five or thirty Democrats.
 Q. Did the polls open at six o'clock?
 A. They did not.
 Q. What time did they open?
 A. About quarter after seven o'clock.
 Q. How long after sunrise?
 A. About one hour and a quarter.
 Q. Was there any one present wearing uniforms?
 A. Yes, sir.
 Q. To what political party did they belong?
 A. The Democratic party.
 Q. Did any of these men have arms?
 A. Yes, sir.
 Q. About how many?
 A. About twenty.
 Q. Who were the parties that were having the sham fight on the piazza; those with red shirts or without?
 A. Those with red shirts and those without.
 Q. In this fight were any arms used?
 A. Yes, sir.
 Q. If so, how, and what?
 A. They had pistols and clubs, and brandished them at each other, striking on a box and making a great noise.
 Q. Why did you leave the poll?
 A. A Democrat demanded my commission and I handed it to him, and he returned it, saying he be damned if I should supervise there that day.

As to Meeting Street precinct, Edgefield County, William T. Tillman testified as follows:

Question. Were you at Meeting Street polling precinct at the last election?
 Answer. I was.
 Q. In what capacity?
 A. I was a United States supervisor of elections.
 Q. Were you present when the poll opened?
 A. I was.
 Q. What hour did it open?
 A. About six o'clock.
 Q. Did you see the box opened?
 A. No, sir.
 Q. Did you act as supervisor?
 A. No, sir.
 Q. Why not?
 A. I was prevented by the Democrats; they struck me with a stick and asked me what was my business there; I told them I was United States supervisor. One said, "What does the United States know about you?" He said then, "God damn you, you will smell hell here before night." While waiting for the poll to open, a Democrat snatched my hat off and hung it up. I put it on; he snatched it off again, saying, "I hung it up; let it stay, or the first thing you know your head will be hanging there." He went out of the room and returned with a club, apparently a piece of fence-rail, and struck me twice with it, and I retreated under the stairway, and he then struck me over the head. The clerk asked me to come outside with him. I did so, and while there the poll opened. A Democrat snatched my papers from me, and I saw them no more.
 Q. How many Democrats were around the poll at that time?
 A. About forty or forty-five.
 Q. About how many Republicans?
 A. There were none.
 Q. Were any of the Democrats in red shirts?
 A. Yes, sir.
 Q. Many of them?
 A. All except three or four.
 Q. Any of them have arms?
 A. Yes, sir; there was about twenty-five or thirty pistols that I saw.
 Q. See any guns?
 A. No, sir.
 Q. Did you hear any threats besides those you related?
 A. No, sir.
 Q. Did you vote?
 A. Yes, sir.
 Q. Do you know of any Republicans going to that poll and could not vote?
 A. When my papers were taken away I was struck three times over the head, and being advised afterward by friendly Democrats to leave, I did so. I returned twice, but receiving abuse from the same man, I left the poll; about a mile away I met about one hundred and seventy-five or one hundred and eighty Republicans. I told them of my treatment. We went to the poll and found it surrounded by red-shirters, and the Republicans finding that the Republican supervisor was not permitted to act, would not vote and left the poll.

As to Red Hill precinct, Edgefield County, Anderson Carter testified as follows:

Anderson Carter, a witness of legal age, produced by contestant, after due notice to contestee, deposes as follows to questions propounded to him:
 Question. State your age, residence, and occupation.
 Answer. Thirty years old; reside in Wise Township; occupation, wheelwright.
 Q. Were you at Red Hill polling precinct on the day of last election?
 A. I was there as a United States supervisor.
 Q. What time did you get there?
 A. Quarter before six in the morning.
 Q. What time did the polls open?
 A. I could not tell what time they opened; I was not there.
 Q. Was the polls opened at six o'clock?
 A. No, sir.
 Q. How long did you remain there?

A. Until half past six.
 Q. What caused you to go away?
 A. Mr. Ben. Glanton, one of the managers, told me I could not serve without my having my oath with me. I then showed Mr. Glanton my commission. A party of white men came up. One of them snatched my paper from me and tore one up, and said, "God damn, if you don't like it you need not take it." Others said, "You had better leave, and that mighty quick, and not let me see you here any more to-day; if you do I will put a light-hole through you." I then left.

AIKEN COUNTY.

As to Creed's Store, Aiken County, Alexander Williams testified as follows:

Question. Where were you on the 2d day of November last?
 Answer. At Creed's Store.
 Q. What position did you hold, if any, on that day?
 A. United States supervisor.
 Q. What were the duties of supervisor?
 A. To keep a list of those who voted, and to look over the conduct of the election, if I understand it.
 (The above question objected to.)
 Q. Did you keep a list?
 A. I did.
 Q. What time did you arrive at the poll?
 A. Between four and five a. m.
 Q. Do you know the law as regards the opening and closing of the polls?
 (Also objected to.)
 A. I do. The law says that the poll must be opened at six a. m. and be closed at six p. m.
 Q. Did you discharge the duties of supervisor to the closing of the polls?
 A. I did not.
 Q. Why?
 A. About five o'clock p. m. the Democrats begun shooting at and knocking some colored men, and then came running in the house where I was. I asked one of the managers if it was safe for me to stay there. He said, no; he thought it was best for me to get out of the way. The crowd came in saying, "Kill the d—n niggers, for they have no business here; run them out." I then squeezed through the crowd and got out. Mr. Kropa, the manager who advised me to leave, was, when I left, walking about in the room where the box was with a double barrel gun under his arm.

As to Kneece's Mill, Aiken County, Peter Waggiels testified as follows:

Question. Were you present at Kneece's Mill on the day of the last general election; and, if so, in what capacity?
 Answer. I was at Kneece's Mill as a United States supervisor.
 Q. Were you present at six o'clock in the morning?
 A. I was.
 Q. Was the poll opened at six o'clock?
 A. A little after six; about ten or fifteen minutes after six, as near as I can recollect.
 Q. Did the managers open the box and show you the inside of it?
 A. Yes, sir; on my demand they did.
 Q. Did the managers keep a poll list?
 A. They did.
 Q. Did you keep a poll list?
 A. Yes, sir.
 Q. Did the Democratic supervisor keep a poll list?
 A. He did not.
 Q. Were you present when the poll closed?
 A. I was not.
 Q. Why not?
 A. I was prevented.
 Q. Prevented how?
 A. My poll list was taken away, and I was driven from the poll.
 Q. What time in the day did this happen?
 A. About twenty minutes to four.

As to Low Town, Wells's precinct, Aiken County, J. P. Spells testified as follows:

Question. Were you at Low Town, Wells's precinct, at the last general election?
 Answer. Yes, sir.
 Q. At what time did you get there?
 A. I got there I suppose at or after six o'clock.
 Q. Were you present when the poll opened?
 A. Yes, sir; I got there as they were coming up to the poll with the ballot-box.
 Q. Did they open the box before the voting commenced?
 A. Yes, sir; they opened the box publicly.
 Q. Did you remain all day at the poll?
 A. No, sir.
 Q. What time did you leave?
 A. About the hour of nine.
 Q. Why did you leave?
 A. Well, sir, the violence that was used there; there came a crowd of men from Silvertown, and as they came up they rushed in among the Republican voters which were at the poll at the time, charging amongst them with their horses, and shooting amongst them with their guns, and knocking some down; that time the men broke for the swamp, this red-shirt crowd followed them to the swamp. Two colored voters that took tickets to vote, as they were coming up to put them in the box two white fellows snatched the tickets from them. This crowd came back and asked what negro fellows were they at the poll; some said to the others, "It is the Radical supervisor; let's take him out and kill him." One said, "So do." Another in the same crowd said, "Don't do that." They said, "Yes, let's kill him; jerk him out."

They then commenced advancing to the house. At the time George Taylor, he said, "What is your name?" I said, "J. P. Spell." He said, "You have authority to come to this poll, but if you want to save your life I will guard you through this crowd so they will not kill you." Another man came up and said, "My name is Hans Johnson." He said, "Walk between the two and I will take you up to my house, and I will convey you off from the poll, and will show you where you can make your escape, and then you can make your escape back to Aiken in the night." I did so. As I was coming off I met a crowd of Republican voters that had been assaulted by the same crowd, and one opened his bosom and showed me a big gash in his bosom. That was the reason I could not stay there from morning to night, from their advancing upon me in the house and from threats.

Q. Was Mr. Taylor and Johnson Democrats?
 A. Yes, sir.

As to Jordan's Mill, Aiken County, L. W. James testified as follows:

Question. Where were you on the 2d day of November last?
 Answer. At Jordan's Mill.
 Q. In what capacity, if any?

A. United States supervisor.
 Q. Did you discharge your duty as such without any hinderance?
 A. No; the managers objected to my being in the room where the poll was opened, and I went out. After this they allowed me to go into the room.
 Q. How did your poll list agree with that of the other supervisors and the managers' poll list?
 A. The other supervisors' and the managers' poll list was 12 ahead of mine at 12 o'clock; at the close of the poll my list was 321, and theirs was 348, as near as I can remember.
 Q. Were you threatened on that day?
 A. Yes; by the clerk of the board of managers. When we compared our poll list I disputed the correctness of his, and he drew his knife, and after some threats by him on account of my disputing his list I agreed to put 12 names on my list to make it agree with his. During the afternoon I discovered one of the managers putting tickets in the box under the arm of another, and saw the clerk at the same time writing down names on the poll list. I then found how the 12 names got on the managers' poll list in the morning that I did not have on mine.
 Q. How did the managers' list compare with the ballots in the box?
 A. There was an excess of 21 or 22 ballots in the box.

BARNWELL COUNTY.

As to Buford's Bridge, Barnwell County, F. A. Blackwood testified as follows:

Question. Were you at Buford's Bridge on the day of the last general election?
 Answer. I was.
 Q. What capacity?
 A. United States supervisor.
 Q. What time did you get to the poll?
 A. Between eight and nine o'clock.
 Q. Where was the ballot placed?
 A. In the room of the Masonic Hall.
 Q. How was the voting conducted?
 A. I remained there but a short time, and very few voted then.
 Q. Why did you go away?
 A. Because the chairman of the board said that he would not recognize me as supervisor, and so few were allowed to vote I did not see any reason to remain.

As to Elko, Barnwell County, E. J. Snetten testified as follows:
 My name is E. J. Snetten; age, 59; residence, Blackville; occupation, minister of the Gospel.

Question. Were you at Elko precinct on the day of the last election?
 Answer. I was, as United States supervisor.
 Q. Were the managers Republicans?
 A. No; they were all Democrats.
 Q. Did you remain at your post all day?
 A. I did not. At the opening of the poll I requested to enter the house where the poll was, but was refused admission by one of the managers, who said that the managers were all honest, and said that I must go into that pen; I went into the pen and started to keep a poll list. Soon after some came up to vote and whispered their names; when I asked them for their names the managers told them not to give their names, as I had no right to take them. This happened a great many times, and I was unable to get the names of voters; these were Democratic voters. There was a great deal of cursing and loud noise by the Democrats; one Diamond made many threats and cursed me, saying that some boys would be up here to-day to see into those big eyes. Many of them were under the influence of whisky; there was a man standing beside me who brandished a large revolver, and I thought that he was going to shoot me. I heard some yelling, and a crowd of about twenty-five men rode up with red shirts on, and this man said, "Here are the boys that will see in Snetten's big eyes;" they dismounted and crowded the poll, and the pen in which I was was torn apart, and fearing personal injury I took my things and left the poll.
 Q. Were you afraid to stay there?
 A. I really was; it would not have been safe.
 Q. What time was this?
 A. About 8.45 a. m.
 Q. How many Republicans had voted at that time?
 A. Not more than 3, I think.
 Q. How many Democrats?
 A. About 40 or 50.
 Q. Why more Democrats than Republicans?
 A. The Democrats were making so much noise that the Republicans were afraid to go up to the poll to vote.
 Q. Was the election free and fair at that poll?
 A. No.
 Q. About how many Republicans were present at that time?
 A. Thirty or forty.
 Q. Why did not more Republicans vote?
 A. They were subjected to such harassing questions and so much trouble that they could not vote, and they went away without voting; I went away from the poll because I was satisfied that it was not free and fair, and because of the treatment I received.
 Q. Did the managers give you every facility for discharging your duty as supervisor?
 A. They did not; but obstructed and hindered me from doing so.
 Q. Did the Democratic supervisor keep a poll-list?
 A. He did not.

Such, in brief, is the account given by the officers of a great Republic of fifty million people, whose special duty was to preserve the purity of the ballot, of the treatment they received at the hands of the officers and citizens of this Congressional district; and I call the attention of the American people to this evidence that they may see how the statutes of the country are defied and the officers of the Government obstructed in the performance of their duties.

There is another remarkable feature connected with this election contest, to which I will briefly allude, that to my mind furnishes unanswerable and overwhelming evidence that the grossest frauds must have been perpetrated in the interest of the Democracy at this election.

In the county of Aiken the census of 1880—the year when this election was held—shows that the white males of twenty-one years of age and upward, including native-born and foreign, whether naturalized or not I do not know, were 2,873; colored males of the same age, 3,112; making an aggregate of 5,985 white and colored, native-born and foreign, of voting age. The vote, as certified by the secretary of state in his return, and upon that return the contestee's credentials were based, gives the vote for Mr. Tillman as 4,980 and of Mr. Smalls 1,467, making an aggregate of 6,447 claimed to have

been cast at that election, showing an excess of votes over the voting population in that county of 462; and the evidence in this case shows conclusively that 414 citizens were deprived of the right of suffrage by means to which I will hereafter allude, which, added to the excess of 462, would increase the vote to 876 above the voting population of the county.

Another remarkable feature deducible from these figures is that if Mr. Tillman received the vote which was credited to him in the State canvass he must have received the votes of every white male voter in the county and 2,107 colored votes in addition.

The evidence in this record shows what every intelligent man in the country knows, that the colored people vote the Republican ticket. They regard that party as the party that gave them their freedom and bestowed upon them the rights of citizenship, and when left to vote as they choose, unawed by fear, they are faithful to the Republican party as they were faithful to the Union cause during the late war, and the persecutions and the outrages that have been visited upon them since their emancipation have driven them together more closely and increased their devotion and loyalty to that party.

In the county of Edgefield the voting population according to the census returns was as follows: White males, twenty-one years of age and over, 3,553; colored, 5,648; a total of 9,201. The vote, as counted by the State board, for Mr. Tillman was 6,467, for Mr. Smalls, 1,046; a total of 7,513, or 1,688 less than the voting population. But the evidence in this case proves beyond a question that in the county of Edgefield, in the various precincts, 3,020 legal voters were deprived of the right of suffrage by intimidation and violence. This, if added to the vote counted, would show the excess of votes over voters to be 1,332.

Mr. ATHERTON. Will the gentleman tell me one of those precincts to which he refers?

Mr. BRIGGS. I am speaking of Edgefield County. The excesses are scattered all and if through it, the gentleman is familiar with the record he knows to what precincts I refer without questioning me, because they all appear in the record.

Now, if Mr. Tillman's vote is correctly stated at 6,467 he must have received in addition to the votes of every white male voter in the county the votes of 2,914 colored voters, a proposition which no man in his senses will believe.

In the county of Colleton the voting population by the census of 1880 was: white males, 2,706; colored, 5,173; total, 7,879. By the return of votes Mr. Tillman received 3,475 votes in this county and Mr. Smalls 2,776; a total of 6,251, or 1,628 less than the entire voting population. The record discloses that many voters were disfranchised, 618 cast in Jacksonville precinct not counted, 276 in Horsepen precinct, 700 in Summerville, and in other precincts hundreds were deprived of the right to vote, the exact number of which cannot be accurately ascertained, but a number sufficiently large which if added to the vote counted would show that the vote far exceeds the voting population of the county. A comparison of these figures alone shows that for Mr. Tillman to have received the vote counted and certified for him he must have received the entire white vote and 769 colored.

In Barnwell County the census of 1880 gives the voting population: white, 3,131; colored, 4,775; total, 7,906. The return of votes for this county were as follows: Tillman, 5,423; Smalls, 2,444; total, 7,867; lacking only 39 votes of the entire voting population of the county; while the evidence in this case shows that there were beyond all controversy 1,148 voters who were deprived of the right of suffrage, which, added to the vote as counted, would show an excess of votes over voters in this county of 1,117. If Mr. Tillman's vote is correctly stated in the returns from this county he must have received the entire white vote of the county besides 2,391 votes from the colored voters.

In Hampton County, by the census of 1880, the white males over twenty-five years of age were 1,381; colored, 2,447; total 3,828. The vote as returned by the secretary of state was: for Tillman, 2,590; Smalls, 1,575; total, 4,165, showing an excess of votes over voters in the county of 337; and the record evidence in this case shows that in this county hundreds of colored men were deprived of the right of suffrage. If the vote for Mr. Tillman was properly returned and counted he must have received in addition to the entire white vote 1,209 votes from the colored voters.

The census shows the aggregate voting population in these five counties to be as follows: White, 13,644; colored, 21,153; total, 34,797. The vote as returned by the State board and counted was 37,622, and the voters who were deprived of the right to vote in these five counties, and the votes not counted in precincts where they were cast, are 4,525, showing an excess of votes over voters on the returns as made of 7,348. In these five counties the white voters were 13,644, Mr. Tillman's vote 22,935, and if Mr. Tillman received the vote with which he has been credited he must have received the votes of 9,291 colored voters.

It is unnecessary for me to dwell upon these statistics; they speak for themselves. No eloquence or rhetoric can add force or weight to their story. They must be sufficient to convince any fair-minded man that the vote returned for Mr. Tillman from these five counties and upon which his credentials were based was the result of frauds of the most stupendous character.

The election law of South Carolina in force at the time of this election was quite ample in its provisions, easily understood, and, if strictly followed by the officers of election, furnished every facility for detecting frauds and correcting errors if any were committed. It provided for a State board of canvassers, consisting of certain State officers; a board of three commissioners of elections for each county in the State, who were to be appointed by the governor, and a board of three managers for each election precinct, to be appointed by the county commissioners. The precinct managers were authorized to employ a clerk, who was required by law to keep a poll list containing the names of all persons who voted in the precinct. At the close of each election the precinct managers and their clerk are commanded to immediately proceed to open the box, count the ballots, and continue such count without adjournment until the same is completed, and make and sign such a statement thereof as the nature of the election shall require. If in counting two or more like ballots shall be found folded together only one shall be counted, the other destroyed, but if they bear different names they shall both be destroyed and not counted. If the ballots in the box exceed the names on the poll list, they shall be returned to the box, mixed together, and one of the managers or clerk, without seeing the ballots, shall draw from the box and immediately destroy as many ballots as those in the box exceed the names upon the poll list.

Within three days thereafter the chairman or one of the board, to be designated in writing by said board, shall deliver to the county commissioners of elections the poll list, the box containing the ballots, and a written statement of the result of the election in the precinct. The county commissioners of elections shall meet at the county seat, organize their board on the Tuesday next following the election, and proceed to canvass the statements of the several boards of managers. They shall make such statement thereof as the nature of the election shall require, within ten days after their organization, and shall make separate statements of the whole number of votes given in such county for Representative to Congress, a copy of which shall be transmitted to the governor, secretary of state, and the comptroller-general. Immediately after the final adjournment of the county board the chairman thereof shall forward, addressed to the governor and secretary of state, by a messenger, the returns, poll lists, and any protests and all papers pertaining to such election.

From this statement of the law how plain and simple are its provisions and how easily can they all be carried out by the precinct and county officers. With the poll lists, returns, and votes, how surely can all frauds be detected and errors corrected. By a comparison of the number of votes cast with the names on the poll list errors in the count will be discovered and incorrect returns from precinct officers can be corrected. If it is claimed illegal votes were cast by persons not entitled to vote, or that fictitious names were fraudulently placed upon the list to correspond with ballots stuffed into the box, the poll list, containing the names of the voters, furnish the witnesses by whom these frauds may be discovered. The preservation of these papers are of vital importance in detecting errors and in the investigation of frauds committed by precinct managers or by the county commissioners. Without the poll lists, returns, and ballots, no matter what mistakes have been made or what frauds have been committed, they are beyond the reach of discovery and correction.

In this contest when the secretary of state was called upon for copies of the election returns and poll lists for this district he replied that there were no poll lists or precinct returns of votes cast at that election sent to his office from the counties of Edgefield, Barnwell, and Colleton.

Why were not these papers sent, filed, and preserved, and why did these officers neglect this plain and important duty? If these papers were in existence to-day they would furnish evidence conclusive and overwhelming of the fairness and legality of the election in this district, and thus vindicate the election officers, or they would establish beyond question the truth of the charges of frauds and rascalities and identify and expose to public view the officers by whom they were perpetrated. The plain and imperative provisions of the law required those papers to be made and forwarded, and a faithful discharge of official duty demanded a strict compliance with its provisions.

I can conceive of no object or purpose for this neglect unless it was to cover up and conceal the frauds which had been committed and prevent their discovery by the suppression or destruction of this important evidence. The mass of testimony in this case proves beyond a doubt that in these three counties illegal votes in great numbers were cast, polls were not opened in several precincts, votes cast for the contestant in other precincts were not counted, intimidation and violence prevented great numbers from exercising the right of suffrage, frauds of the grossest character were committed, and the returns from these three counties were tainted and polluted thereby. How shall the legal votes in these counties be ascertained and determined? How shall the vote be corrected, the taint removed, and the frauds eliminated? It is impossible without this record evidence—votes, poll lists, and returns which the law required to be made and preserved for such purpose. Those papers never having been made, or, if made, never forwarded and filed, or, if forwarded and filed, since suppressed and destroyed, it is impossible to correct the errors and frauds which entered into the vote of these three counties.

Under the well-settled principles of election law, and in accordance with a long line of well-established legal precedents, the Committee on Elections would have been amply justified in throwing out the entire vote of these three counties and leaving the vote as returned from the other three to determine the election, which would have seated Mr. Smalls, the contestant, by a majority of over a thousand votes. This would have been an easy, short, and legal way to have settled this contest. But the Committee on Elections, whose duties during the present session have been of the most laborious character, apparently anxious to avoid even the appearance of injustice, have given the contestee the benefit of every doubt and have only corrected errors in the votes of several precincts, thrown out the votes in others, and rejected the entire vote of Edgefield County; and their findings of fact in every instance is justified by the overwhelming evidence on file in this case, and the principles of law by which they have been governed are too well settled to be questioned or denied.

I desire now to inquire into the details of this case for the purpose of bringing before the American people some of the striking features of the election in this district to illustrate still further the methods of administering the State and national election laws and to sustain the action and findings of the committee.

The following certificate from the secretary of state contains a statement of the vote in this district as returned to that officer, and upon this statement of the vote a certificate of election was issued to the sitting member:

Fifth Congressional district.

Counties.	Names of candidates.		
	George D. Tillman.	Robert Smalls.	Scattering.
Colleton	3,475	2,776
Beaufort	591	5,978
Barnwell	5,422	2,445
Edgefield	6,467	1,040
Aiken	4,980	1,467
Hampton	2,590	1,575
Totals	23,325	15,287

STATE OF SOUTH CAROLINA, Office of Secretary of State:

I, R. M. Sims, secretary of state, do hereby certify that the above is a true copy of the vote for Congress in the fifth Congressional district in said State, as returned by the county board of canvassers for the counties composing the fifth Congressional district, and which returns are now of record in this office.

Witness my hand and the seal of State, at Columbia, this 16th day of February, A. D. 1881.

[SEAL.]

R. M. SIMS, Secretary of State.

The contestant sets forth in his notice of contest sixteen reasons therefor. They are too long to be recited here and their recital is unnecessary; they may be summed up in substance as follows: He claims that he received a much larger number of votes than were counted for him by the precinct managers; that legal votes counted for him by the precinct managers were thrown out and not counted by the county commissioners; that a large number of illegal votes were counted for the contestee; that ballots returned were counted for the contestee that should have been rejected; that by reason of threats, violence, intimidation, and other unlawful means great numbers of Republicans were prevented from voting for him, and that these outrages were of so gross a character that no legal or fair election was held in some of the precincts and the vote from those precincts should be rejected.

Let me now examine, briefly, the evidence in this case in connection with the report of the Committee on Elections and see how far it sustains the charges of the contestant and justifies the findings of the committee.

COLLETON COUNTY.

The committee made the following corrections in the vote of this county. The vote of the county is certified for—

Contestee	3,475
For contestant	2,776
Adding Jacksonborough	618
Adding Horse Pen	276
Adding Walterborough	90
Contestant	3,760
Deducting Walterborough, 90—	3,670
Contestee	3,385
Contestant's majority	375

In this county, in the vicinity of Jacksonborough, three large precincts, namely, Adam's Run, Ashepoo, and Bennett's Point, were abolished, and the Democratic precinct managers, without notice and in neglect of a duty imposed by law, failed to open the polls at Gloversville, thus concentrating the voters of that place and the three

abolished precincts at the poll in Jacksonborough. Under the law in this State county commissioners of election are required to provide the managers a ballot-box for each precinct. There are two sizes in use in the county, and the board sent to the managers of Jacksonborough the smaller box, which was insufficient in capacity for the voters assembled. At one p. m. this box became full and the managers refused to receive any more votes. At the time the voting ceased over one hundred Republicans stood around the polls eager to vote, and many others were on their way. They lost, by the negligence of county and precinct officials, the right to vote, and were literally disfranchised. When this box was closed it contained 618 votes. It was returned to the county board and they refused to count the votes and rejected the poll.

By their action in providing the small box and the managers in refusing to receive votes after the box was full, and the county board rejecting the vote, that number of votes was lost to the contestant. The county board in this instance should have counted those votes. Their duties under the law as to votes for members of Congress are simply ministerial. This is apparent from the language of the statute, and the supreme court of South Carolina recently so decided. In rejecting this poll the county board exceeded their powers and usurped and exercised judicial functions; whether done in ignorance of their duty, or fraudulently, it is immaterial. Under the law the vote should be counted, and the committee are correct in so deciding.

HORSE PEN PRECINCT.

The Congressional vote of this precinct was not counted, but rejected by the county commissioners. Their duties being ministerial, this action was unauthorized and illegal. The committee, therefore, properly counted this vote.

WALTERBOROUGH PRECINCT.

The manner in which the election in this precinct was conducted was irregular and unfair. At the close of the polls the votes in the box exceeded the number of names on the poll list 141; the box was full and not capable of holding the ballots after being thoroughly stirred, and was set in a basket and the excess drawn from the basket. The manager who drew out the excess passed the ballots deliberately through his hands, and in this way one ballot was easily distinguishable from the other, and in the process of drawing out the excess Mr. Smalls lost from 90 to 110 legal votes, and the same number of illegal votes were given to Mr. Tillman. To correct this error or fraud, whatever you may choose to call it, the committee have deducted 90 votes, the smallest number, from the contestee, and added the same to the vote of the contestant. With this and the other corrections the vote in Colleton County would stand as I have before stated. It must not be understood that these errors to which I have specifically alluded cover all the irregularities. In addition to them the evidence shows frauds, violations of law, intimidation of voters, and interference with the United States supervisors, which would have justified the rejection of other precincts if not of the entire vote of the county.

Of the occurrences at Snider's Cross-Roads, Smoke's Cross-Roads, and Carter's Ford, I have already spoken. At Maple Cane 26 fraudulent votes were found in the box and the Democratic officials in drawing out the excess drew out 25 Republican and 1 Democratic vote, thus giving to the contestee an advantage of 50 votes to which he was not entitled. At Bell's Cross-Roads the box had been stuffed; the ballots exceeded the names on the poll list, and in drawing out the excess Mr. Smalls lost 31 legal votes and Mr. Tillman gained 31 illegal votes, making a loss of 62 to Mr. Smalls. At Summerville precinct the Democratic officers failed to open the poll, and thus occurred a loss of 700 votes to Mr. Smalls. At Gloversville the poll was not opened, and resulted in a loss of 400 votes to Mr. Smalls. No good reason was or can be assigned for the failure to open these polls.

From all the testimony in this record it clearly appears that the conduct of the officers in this county was reprehensible in the extreme. From the failure to open the polls at some precincts and prematurely closing others, from the excess of votes over voters and the dishonest methods of drawing out the excess, the loss to the contestant must have been at least 1,400 votes.

BARNWELL COUNTY.

The changes made in this county from the vote as returned and counted by the State board are as follows:

	Contestee.	Contestant.
Total vote of Barnwell County	5,422	2,445
Deduct Allendale	700	36
Deduct votes illegally drawn—Ferrill's Store	22
	4,700	2,409
Add vote not counted—Ferrill's Store		22
		2,431

Let us examine the votes in regard to the election in these precincts. Allendale is a strong Republican precinct. The vote counted and returned was 700 for Tillman, 36 for Smalls. The evidence shows that a large number of Republicans assembled with the Republican

tickets in their hands, variously estimated from three hundred to five hundred. Two hundred and fifty, being all members of one Republican club, were there together for the purpose of voting. A crowd of Democrats, some of them armed and clothed in red shirts, kept at the door and on the piazza, thus obstructing the passage to the voting place. If a colored man attempted to enter he was asked what ticket he intended to vote, and if he would reply, "The Republican ticket," he was boldly told he could not vote that ticket there. He was pushed from the piazza, spat upon, beaten, and knocked down by these men who had possession of the passage-way to the polls.

In the early part of the day assurances were given that the colored men could vote after twelve o'clock, but they met with the same obstructions and the same brutal treatment after that hour as before. The United States supervisor attempted to keep a poll list; it was impossible to keep it accurately, and he abandoned it about one p. m. He was requested to sign the poll list and return that night by the Democrats, but refused to do so. A crowd of Democrats visited his house about one o'clock on that night and demanded that he should get up and sign the list, but he refused; then they cursed, threatened to break down his door, and shot around his house, alarming his family. The next night these same things were repeated, and he concluded, for his own safety, it was advisable for him to leave, and he did so, remaining away several weeks. The evidence as to this precinct shows, beyond contradiction, that a fair and honest vote did not take place, and the poll should be rejected.

At Ferrill's Store, when the votes were counted, there were found to be in the box 22 votes in excess of the names upon the poll list, and in drawing out the excess the manager was not blindfolded but looked into the box and drew out 22 Republican votes. The officers at this precinct were all Democrats, and, from the evidence, the fraudulent votes were Democratic votes. To purify this poll and to correct the frauds perpetrated in drawing out the excess, 22 votes should be taken from the contestee and the same number added to the contestant.

Having called attention to the corrections made by the committee in this county I desire to refer to some other matters to illustrate the methods and spirit of the Democracy. This county was the theater of the Ellenton riot, which shocked the American people by its atrocities in 1876, and the colored people are still haunted by its memories and live in constant fear of its repetition. So strong and intense is this feeling that they hardly dare act, speak, or think as independent freemen. It pervades to a greater or less extent the precincts of Robbins, Millitts, Mixon's Mills, Allendale, Baldock, Barker's Mills, Williston, Elko, and Buford's Bridge. At Barker's Mills and Mixon's Mills the two political parties are about of equal strength; all the others named are strong Republican precincts.

At the election in 1880 this condition of the colored people seems to have been thoroughly understood. For several nights prior to the election the red-shirted Democracy rode around through many of the precincts, making the night hideous with their hellish orgies, firing guns and pistols, knocking at the cabins of the colored men, and making threats of various kinds, for the purpose of preventing them from voting the Republican ticket. Colored men on the way to the polls at Red Oak precinct, within half a mile of that place, were met by eighteen armed men, who shot among them or over them, and the colored men fled in different directions, some of them sleeping in the woods for several nights. The night before they visited the house of Mr. Gifford and broke down the door, and threatened, if he went ten steps from his house, they would shoot him as they had Simon P. Coke. By such threats as these the neighborhood was greatly alarmed, and many of the voters dared not attempt to exercise the right of suffrage.

At Graham's the train from Augusta brought down a crowd of Democrats armed with pistols, cursing and yelling; all voted, one of them three or four times. At Elko, on the day of election, the red-shirted Democracy were out in great numbers, armed with pistols, and the Healing Springs Democratic club came, yelling and cursing as they came up. The object of these demonstrations was to alarm the colored voters, and it succeeded, as but few voted, and the statement of Mr. Nixon, one of the Democratic managers, that there would be "d—d few Republican votes polled there that day," proved to be literally true. At Baldock the red-shirters were out Thursday, Friday, and Saturday nights prior to the election, riding up and down, cursing, and discharging guns and pistols, openly proclaiming that they were "going to keep the d—d Republicans away from the polls and give them hell."

On Saturday night before the election they left a coffin, cut from pasteboard, at the house of Mr. Gill, the United States supervisor, which had the following persuasive inscription upon it:

Alex. Gill, if you don't quit your ways and join the Democracy you shall be in clay in a few days.

Some fifteen or twenty Republicans were not permitted to vote by the managers on the ground that they were minors, when the evidence shows they were not. The managers of election and the precinct clerk belonged to the red-shirted Democracy and had on their uniforms when officiating at the polls.

At Barker's Mills 350 Republicans were not allowed to vote. Democrats in red shirts, armed with clubs and pistols, barred the way and prevented them, and these colored voters were publicly informed

that if they would vote the Democratic ticket they could do so, but would not be allowed to vote the other. Democrats on the steps, blocking the way to the polls, declared, "By God, you shan't vote unless you vote the Democratic ticket, as we are voting." Others, in red shirts, prevented the Republicans from coming within the yard, saying they would "be d—d if the negroes should vote."

At Buford's Bridge the Republicans were intimidated by Democrats clothed in red shirts, armed with pistols, clubs, knives, and hatchets. Three hundred and thirty-five Republicans could not vote, and their names were all taken down and appear in Exhibit B. It was openly proclaimed by Democrats that the "d—d Republicans should not vote" there; that this was the "white man's country, and negroes should not vote in it."

I have thus given a brief record of the proceedings in this historic county of Barnwell, made memorable by the bloody atrocities of Ellenton, and submit the record to the careful consideration of the American people.

HAMPTON COUNTY.

In the vote of Hampton County the committee make the following corrections in the vote as counted by the State board:

Corrected vote of contestee.

The vote is stated.....	2,590
Deduct Brunson.....	336
Deduct Early Branch.....	316
Deduct Beach Branch.....	120
Deduct Lawtonville.....	340
Deduct Barnesville.....	459
	1,571

Contestant.....	1,575
Deduct Brunson.....	19
Deduct Early Branch.....	87
Deduct Beach Branch.....	
Deduct Lawtonville.....	174
Deduct Barnesville.....	129
	409
	1,166

Smalls's majority..... 147

Let us see if there are just grounds for the rejection of the votes in the precincts above named.

BRUNSON PRECINCT.

At this precinct the poll was held in the back room of an old store, to reach which the voters had to pass through the front store. The day before election a crowd of armed red-shirted Democrats came into the town, and during the entire night they whooped and yelled, discharged pistols and guns, and exploded powder under an anvil.

In the morning the drunken crowd occupied the front store, controlled the entrance to the polls, and would not allow Republicans to enter. The box contained, one voter says 200, another 250 votes in excess of the names upon the poll list. The whole proceeding at the polls was characterized by threats and intimidation of the most disgraceful kind, and no honest man would permit it to be counted.

EARLY BRANCH.

To this precinct a crowd of drunken Democrats came in the forenoon, riding around during the day between Early Branch and People's poll, threatening and beating Republican voters, creating disturbances, discharging pistols, repeating and stuffing the ballot-box.

BEACH BRANCH.

I have already called attention to the treatment of the United States supervisor at this poll. Not a single Republican was permitted to vote; the Republican tickets were taken away from a party of Republicans by armed Democrats clothed in red shirts, by methods that would constitute highway robbery in any civilized community, and, for fear of doing injustice to the parties engaged in this transaction, I will let one of the victims tell his story, and in this he is fully corroborated by his associates:

Wilson McTeer, being duly sworn, deposes and says:

By Mr. COLLINS, counsel for contestant:

Question. State your name, age, occupation, and residence.
Answer. My name is Wilson McTeer; age, 40 next February; I am a farmer, and live on my own place of forty acres near Beach Branch.

Q. How long have you been living there?
A. All my life.
Q. Where were you on the 2d of November, the day of the last general election?
A. Beach Branch poll.
Q. What time of day did you go there?
A. About five o'clock in the morning.
Q. Did you go alone?
A. No.
Q. Who went with you?
A. The Beach Branch Club, of which I am a member, and a part of the Matthews Bluff Club.

Q. What did you do when you got to the poll?
A. We waited till about seven o'clock, and when we found that there were no Republican tickets there, Frank Saxson, the president of our club, directed me to take three other men with me and go to Brunson in a hurry and tell Mr. Brabham, the Republican county chairman, to send him some tickets. I took Govan Brooks, Tony Moss, and Edmund Eiley, and we went to Brunson and got a package of about 1,200 tickets from Mr. Brabham and started back to Beach Branch. We rode very fast. When we had got about three miles from Brunson, and at what is known as the Hammock place, John Glover, a Democrat, overtook us, and ran his horse by us and turned the horse around the road ahead of us and said, "Close up." Then eight other Democrats rode up to us with sticks and pistols in their hands and said, "Halt, you sons of bitches, and give us those tickets. If you don't give them up we will blow your d—d brains out."

Q. Did you give the tickets up?

A. I did not have the tickets myself, but they seized hold on me, and was searching my pockets for the tickets. While they were searching me for the tickets, one of them said, "There is the son of a bitch that has them." Then they went to Govan Brooks. One of them held a pistol to his breast and one held a club over his head while others put their hands into his pockets and took the tickets out.

Q. How were those Democrats dressed?

A. They were all dressed in red shirts except one, who wore a red beau.

Q. What did they say after they had taken the tickets?

A. They told us to go and not let them catch us back that way again or they would kill us.

LAWTONVILLE PRECINCT.

I have alluded to the treatment of the United States supervisor at this precinct, who, it is believed, was murdered by the Democracy. Some fifty drunken Democrats, clothed in red shirts, all armed, seemed to be the ruling spirits about this voting place, and they prevented an honest and a fair election. Their outrageous conduct could not be better described than in the sworn testimony of their victims:

Personally appeared before me, Ben. Sheppard, who, being duly sworn, deposes and says, to wit:

Question. What is your name, your age, your occupation, and where your place of residence?

Answer. Ben. Sheppard is my name; my age is fifty-four years; am a farmer; and I live at Dr. Ramsey's place, Lawtonville Township, in Hampton County.

Q. How long have you lived there?

A. Was born and raised there.

Q. Where were you at the last election?

A. Was at the Lawtonville precinct.

Q. Was it a quiet election that day?

A. No, sir; they commenced a row there I suppose, near as I can come at it, about eight o'clock a. m.; they kept quiet down for awhile, for about one and one-half hours, then started row again; then things went on until about four o'clock p. m., when they started it again. They threatened to fight the Republican party for voting; they rebuked us by every blaspheming they could think of; they were armed, every Democrat; most that I seen had from one to two pistols; then in the evening, at four o'clock, they rid off a piece and came back and rid right in among the Republican party with swords and clubs; then we tried to get out of the way, and in trying to get out of the way shot among us. I myself got six balls in me at that time, and another man, named Adam Patterson, got shot. He and I were carried home in a wagon together.

Q. Did you see any one cut or struck?

A. Yes; I saw one man get cut with a sword, and two got struck with a club.

Q. When they shot at you what did they say?

A. When they shot me I was getting away.

Q. What did they say when they came up?

A. As they came up they said, "You God damned son of a bitch," and struck a man standing behind me; at that time I got behind a tree; we, the Republican party, were all peaceable and quiet at the time.

Q. Were you all quiet through the day?

A. Yes, we were all quiet through the day.

Q. Did you say you were shot?

A. Yes; I was shot six times; have five balls in me now; one ball went through my left thigh, one lodged in my left leg below the knee, two lodged in my right thigh, one lodged in my back, and one in my left lower arm. I now show you the scar on my left arm which was made by the ball entering there.

Erasmus Black, being sworn, deposes and says:

Question. State your name, age, occupation, and residence.

Answer. Erasmus Black; age, twenty-eight; occupation, laborer; live at Lawtonville; at John Lawton's place, three miles from Lawtonville.

Q. Were you at Lawtonville precinct on the 2d day of last November, the day of the election?

A. Yes.

Q. What did you go there for?

A. To vote the Republican ticket.

Q. Was everything quiet and peaceful there during that day?

A. No.

Q. State, then, what occurred there to prevent it from being peaceful?

A. That morning when we went there the Democrats started a row to keep us from voting by threatening and cursing us for d—d sons of bitches, and said they come to kill us out that day, and that they were going to fill up a ditch with us. The rows continued until four o'clock that evening; and then the shooting began. They cut us with swords and beat us with clubs. One cut me in the head with a sword. Then we ran and they shot us with pistols and guns.

Q. Do you know of any person being shot on that day?

A. Yes. Ben Sheppard, Adam Patterson, Archey Taylor.

Q. About how many men were running from the poll?

A. About one hundred men were running in every direction.

Q. Were there many Republicans at that poll during the day?

A. About two or three hundred.

Lucius Barnes, being duly sworn, deposes and says, to wit:

Question. What is your name, your age, your occupation, and where is your place of residence?

Answer. My name is Lucius Barnes; my age is thirty-three years; I live four miles from Lawtonville, Lawtonville Township, and am a laborer.

Q. How long have you lived in Lawtonville Township?

A. Where I live now I was born and raised.

Q. Where were you the 2d day of last November, the day of last election?

A. I was at Lawtonville.

Q. What did you go to Lawtonville for that day?

A. I went there to vote the Republican ticket.

Q. Was the election at Lawtonville precinct a quiet and peaceful election?

A. No, sir; it was not.

Q. State what occurred at the Lawtonville precinct that day.

A. When we were going to the poll that morning they commenced cursing us, sons of bitches, saying what they were going to do with us that day, and after that the Democrats made a line to be divided; said we must stay on one side and the Democrats on the other, and we done so rather than have any fuss, but the Democrats would keep coming over on our side, and keep cursing us, and knocked some of the men, and told us if we didn't leave there they were going to play hell with us that day; so we never left right off, but made up a little fire and stood around there until about four o'clock, and then—rather the horse cavalry—went up the road and came back, and commenced knocking and shooting and cutting, and stabbed me in the temple with a sword, and then we had to leave. They told us if we did not leave they would kill us. Adam Patterson was one that got shot, and Archey Taylor and Benjamin Sheppard got shot.

Q. About how many men were in this company of cavalry that went up the road?

A. As near as I can come at it, there was about fifty men.

Albert Hunter, being sworn, deposes and says:

Question. State your name, age, occupation, and residence.
Answer. My name is Albert Hunter; age, fifty-two; occupation, farmer; live in Lawtonville Township.

Q. How long have you lived in Lawtonville Township?

A. Thirty years.

Q. Where were you on the 2d day of November last, the day of the last election?

A. At Lawtonville.

Q. How far is Lawtonville from where you live?

A. Three miles.

Q. What did you go to Lawtonville for on that day?

A. To vote the Republican ticket.

Q. Tell us what kind of row it was that was raised at four o'clock in afternoon?

A. We were sitting around a fire. Two men went in the rear of us to a grave yard. About fifty men went down the road on horses. Two came opposite us where we were sitting at the fire. The two that went to the graveyard then commenced shooting. By the time they started to shoot the horsemen came back. When they got back they charged in on us, and tried to run over us with their horses, knocking us with clubs, chopping us with swords, until they got us scattered from around the trees. When they got us scattered from around the trees and we commenced to run they commenced to shoot us.

Q. How many men got shot?

A. Three that I know of.

Q. How many Republican clubs in that settlement go to Lawtonville to vote?

A. Two.

Q. Do you know of any threats or any shooting of guns by the Democratic party on the night previous to the election?

A. They said when they passed my house that they were going on to Lawtonville, and that d—d Republicans could come on there; that they were going to fill up a ditch with them.

Q. Was there any shooting of guns?

A. Yes; they were shooting guns and pistols along the road and hollowing all the time.

Q. What time was it they passed your house?

A. On Monday, in the afternoon, about sundown.

This is a strong Republican precinct, but the outrages committed upon the Republican voters and the United States supervisor, shown by the testimony, proves conclusively that no fair and honest election was held and the vote must be rejected.

BARNESVILLE PRECINCT.

The evidence as to this precinct shows that the box contained 811 ballots, an excess over the names upon the poll list of 229. The Republican ticket was printed upon white paper, the Democratic upon red. The Democratic was upon thinner and finer paper, and the difference was so marked that one could be distinguished from the other in the dark. In drawing out the excess of votes above the names on the poll list 160 Republican and 99 Democratic votes were drawn out. There were 80 or 88 Democratic votes with one or more folded in them. This poll is tainted and fraudulent, and it is impossible to ascertain the actual legal vote cast; the official return is unreliable and the vote must be rejected.

With these considerations I will leave Hampton County and enter upon the examination of the political methods in vogue in the county of Aiken.

AIKEN COUNTY.

The corrections and changes made by the committee in this county are as follows:

Corrected vote of Aiken County is stated:	
Tillman's	4,980
Deduct Aiken Court-House	719
Deduct Silverton	225
Deduct Creed's Store	231
Deduct Windsor	396
	1,571
	3,409
Smalls's	1,467
Deduct Aiken Court-House	383
Deduct Silverton	
Deduct Creed's Store	16
Deduct Windsor	10
	409
	1,058
Tillman's majority	2,351

AIKEN COURT-HOUSE.

This poll was properly rejected by the committee. The evidence in regard to the proceedings at this poll is quite voluminous and from the lips of eight or ten persons who witnessed them. A barricade was erected in front of the poll, the north end intended to be the place of entrance and the south end the place of exit. A large number of Republican voters congregated around the north end, but were not permitted to enter, the Democrats holding sticks across the entrance to prevent them; while the whites entered the southern end, intended for the exit, without objection. Colored men attempted to go there, but were driven back. A large number of colored Republicans stood all day long attempting to reach the box to deposit their tickets, and at the close of the polls 400 Republicans went away without voting. A short distance from the north end, where the Republicans were massed, a cannon was in position and trained upon the crowd. The Palmetto Rifles, a military company, armed, was in attendance during the day, and at one time drawn up in line on the opposite side of the street. One of the colored Republicans who were pressing to reach the poll was cut in the breast, another in the thigh, and another in the back; some were blinded by having red pepper thrown in their eyes, others were kicked, and all kinds of indignities and cruelties that the depravity of man can suggest were inflicted upon them. There was not even the semblance of a fair and honest election at this poll.

SILVERTON PRECINCT.

This precinct was near the scene of the Ellenton riots in 1876, and the recollection of the crimes and barbarities which occurred then is fresh in the minds of the colored men, and the Democratic spirit which prompted the commission of those crimes still lives. Saturday before the late election an attempt was made to hold a political meeting. Mr. J. H. Holland, who was a prominent Republican, made the first speech, and Mr. Chatfield followed. Chatfield had not spoken long before the Democrats began to curse and threaten him, and they were compelled to close the meeting for fear of personal injury. When Mr. Holland went to the depot for his ticket a crowd of Democrats rode up, surrounded him, seized him by the lapels of his coat, struck him in the eye, the breast, and upon the head, and ordered him to leave. The only offense Mr. Holland had committed was to make a Republican speech. He was appointed United States supervisor for Miles's Mills, and when attacked at the depot he fled for his personal safety and walked through the woods and swamps forty miles to his home. On the day of election the Democratic red-shirted rifle clubs were on duty, and the Republicans were driven from the polls and not a single Republican vote was cast.

CREED'S STORE.

The treatment which the United States supervisor received at this precinct has already been stated. The Democrats and supporters of the contestee raised a disturbance, rushed into the polling place shouting, "kill the d—d niggers, they have no business here;" and the colored voters fled for their personal safety without voting.

WINDSOR PRECINCT.

Mr. Piper was sent to this precinct with the Republican tickets. When taking down the names of the Republican voters a crowd of Democrats came up, gathered around him and the ticket distributor, struck him in the mouth, jammed him with their pistols, and threatened to kill them both if they did not leave the precinct. They were compelled to flee for safety and no Republican tickets were left to be cast.

These four precincts are all that the committee have rejected in the correction of the vote of this county, and the facts in each case fully justify their rejection. A spirit of lawlessness and disorder prevailed among the Democrats everywhere, more or less, throughout this entire county, and ballot-box stuffing occurred in many of the precincts. At Summerville 61 fraudulent Democratic votes were stuffed into the ballot-box, and 326 at Hankerson Page's Store precinct. At Hankerson Page's Store precinct the same lawless and brutal spirit was manifested that characterized the other polls of the county. The red-shirters were in attendance, firing pistols, threatening and cursing Republicans. They carried E. S. Green, a young colored man of twenty-one years of age—a deputy clerk—to the woods, stripped him, four or five held pistols over him, and he was whipped until the blood followed the strokes.

FOUNTAIN ACADEMY.

Here the Democrats rode among the colored voters, threatening to blow out their brains, and the colored men scattered. After a while they returned toward the polls, and the horsemen, who had dismounted and voted, made an attack upon them and drove some sixty colored Republicans away. One was beaten over the head with a gun, one was hit in the mouth, and knots were hurled after them as they retreated, and they were addressed in the following suggestive language: "You G—d d—d niggers, if you don't leave here we will blow your d—d brains out."

KNEECE'S MILL.

I have called attention to the treatment of the United States supervisor at this precinct. It needs only to be said that the red-shirters were on duty, armed and equipped, and boldly proclaimed, "This is the white man's country, and we intend to rule it;" refusing to allow the colored voters to participate in the election.

EDGEFIELD COUNTY.

The returns from this entire county were rejected. This is one of the counties to which I have alluded where the poll lists, returns, &c., were not on file with the secretary of state. The only rational conclusion is that the election officers of the precincts or county must have suppressed or destroyed them, and thus placed beyond the reach of mortal man the evidence by which their frauds could be detected and their rascalities be exposed and the correct and legal vote of the county ascertained. This alone is an ample justification for the rejection of the vote of this county, but the committee do not stand upon this alone.

A spirit of lawlessness and violence seemed to reign supreme in this entire county, and the grossest election frauds were committed in various election precincts. At Edgefield Court-House the polls were held in the court-room upstairs. The doors were double, each eighteen inches wide; one was open, the other securely fastened. This entrance was under a Democratic guard and a hundred or more Democrats flanked the stairway and approaches thereto, and the colored Republican who had the temerity to pass through was the subject of scoffs and jeers, insults and personal injuries on his way to the poll, finding his clothing cut upon his escape from the crowd. The porch over the outside entrance swarmed with Democrats armed with stones and brickbats. On the opposite side of the street the Edgefield Rifles were on duty, and a large force of red-shirters were

in attendance. A sixteen-shooter was under the porch of the court-house and there were three double-barreled guns inside of the rail, within a foot of the polls, and all of the surroundings were more like those of a hostile camp than the place where a free people assembled in a quiet, orderly way to exercise the most sacred rights of citizenship. A line was drawn in front of the court-house, reminding one of the historic dead-line at Andersonville, the red-shirters upon the inside and the colored Republicans upon the outside. To reach the polls this line must be crossed. When attempts were made by colored men to cross the line as they approached it they were told to stand back and not permitted to pass.

This record shows that there were 2,000 colored Republicans who came there to vote that day. They were denied the privilege, and at the close of the polls the vote as counted and declared was 763 for Mr. Tillman and 11 for Mr. Smalls.

MOUNT WILLING PRECINCT.

I have called attention to the treatment of the supervisor at this poll, and I will only add that at the entrance of the polling place the red-shirters were standing around with clubs and pistols, keeping the colored Republicans back and admitting the Democrats. About two o'clock a crowd of red-shirters came up and began beating the colored Republicans with clubs and sticks; one pistol was fired, and after that a great deal of firing took place, and the colored Republicans to the number of one hundred and eighty or one hundred and ninety fled for their personal safety.

MEETING STREET PRECINCT.

I have already called attention to the indignities offered to the United States supervisor at Meeting Street and Chatham's Store precincts, and have nothing further to add except that at Chatham's Store precinct a colored Republican voter was seized by an armed Democrat who beat him, presented a pistol, and threatened to blow his brains out if he did not vote the Democratic ticket. To save his life he complied with this brutal demand.

At George's Cross Roads the colored Republicans were ordered away and driven back by mounted red-shirted Democrats, who crowded the door with their horses and would not permit the Republicans to pass. They threatened to "trail" them out if they did not go away.

At Talbot's Store the United States supervisor was not permitted to be in the room where the voting took place, and the armed red-shirters prevented 150 Republicans from voting. At Red Hill the United States supervisor's papers were taken from him and destroyed.

At Johnson's precinct a row took place about eleven a. m., in which Anthony Mills, a colored man, was killed and some 200 colored men left the precinct without voting.

This, in part, comprises the barbarous, brutal, and fraudulent record of the Democracy of Edgefield County.

The corrections of the errors and frauds which the committee have made in the returns from this district are fully warranted by the law applicable to the facts proved in this case, and the result is given in the following

RECAPITULATION.

Corrected statement of the vote of the fifth Congressional district of South Carolina.

Counties.	Tillman.	Smalls.
Aiken.....	3,409	1,058
Hampton.....	1,019	1,166
Barnwell.....	4,700	2,431
Colleton.....	3,388	3,760
Beaufort.....	391	5,978
	12,904	14,393

Smalls's majority, 1,489.

All the facts and circumstances attending this election disclose a predetermined and well-matured plan by the Democracy to capture this Republican district. To attain that end State and national laws were defied; public officers failed to perform their sworn duties; the right of American citizens to freely cast their votes and have them honestly counted was denied and the exercise of that unquestioned right prevented by armed Democratic desperadoes. At a time and upon an occasion when peace, law, and order should prevail, outrages, anarchy, and disorder ruled supreme. The time will come, and I trust is not far distant, when the perpetrators of such wrongs and outrages upon the colored voters in the South must cease.

Errors may sometimes occur in the administration of our election laws through the carelessness or ignorance of election officers; indiscretions may be committed in times of great excitement when intense party feelings are aroused, but these may be attributed to the imperfections and weakness of our nature. It is a source of profound regret that this charitable view cannot be taken of the striking revelations in this case.

The right of an American citizen to the elective franchise is too sacred to be denied. The purity of our elections is of vital consequence, and the success of our free institutions depends upon its preservation. The man who would obtain official position or the party that would achieve success by its violation should be branded as an enemy of the Republic.

Sundry Civil Appropriation Bill—Removal of Stenographers for Committees.

SPEECH

OF

HON. WILLIAM M. SPRINGER,

OF ILLINOIS.

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 12, 1882.

The House being in Committee of the Whole on the state of the Union, and having under consideration the sundry civil appropriation bill—

Mr. SPRINGER said:

Mr. CHAIRMAN: The clause now under consideration proposes an appropriation "to pay James L. Andem for reporting testimony before the Committees on Foreign Affairs and Public Buildings and Grounds, \$598." Mr. Andem is not one of the official stenographers of the House, and this appropriation is to pay him for work done while acting in the place of the official stenographers for committees recently appointed by the Speaker, most of it when those officials were not engaged with other committees.

I have already shown by the proceedings of the Committee on Foreign Affairs on the 12th of April last, submitted in connection with my previous remarks on this subject, that one of these gentlemen was found to be entirely incompetent to perform the duties of his office; the other, immediately after his appointment, engaged Mr. Andem to act as a substitute for himself, or for both the new officials, in reporting the proceedings of the most important and for a time the only committee requiring the services of a stenographer; and it is for the services so rendered by Mr. Andem that we are now asked to pay nearly \$600, while at the same time the two gentlemen whose duty it was to perform this work were drawing their official salaries. The gentleman from New Jersey [Mr. ROBESON] states that there are precedents for appropriations of this kind. He is mistaken. Appropriations have been made from time to time to pay additional stenographers when the amount of work was greater than could possibly be done by the two officials, but there has never been any appropriation to pay outside stenographers for doing work which the officials failed to do by reason of incompetency.

The gentleman from Michigan [Mr. HORE] and the gentleman from New Jersey [Mr. ROBESON] have intimated that this appropriation has been made necessary by reason of the fact that Mr. Devine, one of the stenographers removed, had engaged Mr. Andem to act as his substitute while he was sick. It is true that Mr. Devine did engage Mr. Andem to act temporarily as his substitute while he was sick; but he asked and obtained the Speaker's leave to engage him, on the express condition that he should be responsible for that substitute's work and compensation. Mr. Andem did act one day for Mr. Devine and Mr. Devine has to pay him for that service. Mr. Andem's skill as a stenographer is freely conceded, and I of course do not object to his being properly remunerated for his services; but I submit that he should be paid by the officers who employed him, and that his compensation for acting as their personal substitute ought not to be made a charge upon the Treasury.

The fact that this appropriation has become necessary, as gentlemen upon the other side allege, involves the question of the removal of the official stenographers for committees who have been for many years in the service of this House.

I propose to recite briefly the facts connected with the Speaker's action in that matter. Mr. Henry G. Hayes was appointed an official stenographer for committees by Mr. Speaker Colfax in 1866, and continued to serve uninterruptedly until removed by the present Speaker on the 23d day of March last. Mr. Andrew Devine was appointed by Mr. Speaker Blaine in the last session of the Forty-third Congress, and continued in the service of the House until the 13th day of April last, when the present Speaker removed him.

On January 5, 1865, the House of Representatives adopted a resolution directing the Speaker to—

Appoint a stenographic reporter, to continue in office until otherwise ordered by the House, whose duty it shall be to report in short-hand, on the order of any of the standing or special committees of the House, such proceedings as they may deem necessary, and, when ordered to be printed, properly index and supervise the publication of the same.—*Journal* 2, 38, pages 79, 80.

On the 18th of January, 1866, this resolution was modified, so as to read that "the Speaker appoint a competent stenographic reporter, to continue in office until otherwise ordered by the House, whose duty it shall be to report in short-hand," &c. (*Journal* 1, 39, page 162.)

On the 25th of July, 1866, a resolution was adopted authorizing the Speaker to "appoint a competent stenographer as assistant official reporter to the committees of the House, to be paid the same compensation as the official reporter, and whose term of service shall expire March 4, 1867." (*Journal* 1, 39, page 1117.) Mr. Henry G. Hayes was appointed by Mr. Speaker Colfax to this position; and on March 5, 1867, a resolution was adopted by the House providing that "the assistant stenographer of the last House [Mr. Hayes] be continued as such until otherwise ordered."

On the 3d of March, 1873, the following preamble and resolution were adopted:

Whereas the present contract for publication of the debates expires with this session; and whereas the sundry civil appropriation bill, about to become a law, provides that until a new contract be made the debates shall be printed by the Congressional Printer, but makes no provision for reporting, leaving each House to adopt such arrangements on that subject as it may deem best: Therefore,
Resolved, That the reports of the House proceedings and debates shall be furnished to the Congressional Printer by the present corps of Globe reporters, who shall hereafter, until otherwise ordered, be officers of the House, under the direction of the Speaker, and shall receive the same compensation now allowed to the official reporters of committees.—*Journal* 3, 42, pages 582, 583.

Up to this time the rules of the House had contained no provision in regard to the official reporters of either class. They continued to hold over under resolutions of preceding Congresses, and their tenure of office was "until otherwise ordered." On January 15, 1874, the Committee on Rules reported the rules for the government of that House, and among them, as a part of Rule 165, was the following:

The appointment and removal of the official reporter of the House shall be vested in the Speaker.

Upon the adoption of this rule the Speaker, Mr. Blaine, made the following announcement:

On the 3d of March last (1873) the House adopted a resolution "that the report of the House proceedings and debates shall be furnished by the present corps of Globe reporters, who shall hereafter, until otherwise ordered, be officers of the House under the direction of the Speaker." The rule just adopted vests in the Chair the appointment and removal of these reporters. Whenever there is any point of doubt as to what the rule may be supposed to be, it is the duty of the Chair to give his own construction of it. The Chair, therefore, announces that he will appoint the existing reporters, and will consider that the power of removal is only vested in him for cause, which he will have entered upon the Journal. When the appointment of reporters is announced it will be for this Congress and for subsequent Congresses, until action removing them, for cause, may be taken by the then Speaker. The reporters as now appointed are to continue in office until removed for cause.—*Congressional Record*, 1, 43, page 681.

The rule above cited was amended on June 22, 1874, so as to include the stenographers for committees, giving the Speaker power to appoint and remove them "precisely as he had the appointment and removal of the reporters of debates."

The original stenographer for committees having resigned in the summer of 1874, the appointment of Mr. Devine as his successor was announced by the Speaker, Mr. Blaine, on the 9th of December, 1874, in the following terms:

THE SPEAKER. When Mr. Francis H. Smith, stenographer for the committees of the House, resigned, the duty of naming his successor devolved upon the Chair, and he now appoints Mr. Andrew Devine, to date from the beginning of the present session.—*Congressional Record*, volume 2, page 37.

The rule, amended as above set forth, continued in force until the last Congress, and there was no change made in the personnel of the stenographic corps of the House until the present Speaker removed Messrs. Hayes and Devine, except that when one of the reporters of debates died during the Forty-fifth Congress Mr. Speaker RANDALL appointed his successor. When Mr. Kerr was elected Speaker of the Forty-fourth Congress the question of the tenure of office of the official reporters of debates and committees was brought to his attention. He carefully examined the precedents on the subject and the then existing rule, which vested the appointment and removal of these officers in the Speaker without limitation except in so far as the construction of the rule by Mr. Speaker Blaine, already cited, might operate as a limitation. It is well known that the Forty-fourth Congress had a large Democratic majority and that it promptly instituted many important investigations which required the services of an efficient and trustworthy corps of stenographers.

Mr. Kerr was strongly urged by some of his partisan friends to make changes in the corps of official reporters, for both debates and committees, upon the ground that the reporters then in office had all been appointed by Republican Speakers and were supposed to be Republicans in politics, and therefore perhaps less likely to serve the House faithfully when it was engaged in these proposed investigations. Mr. Kerr, however, having considered the whole subject carefully, came to the conclusion that the official reporters constituted "a body of trained experts" whose continuous service was necessary to the efficient performance of their duties, that none of the appointments had been made upon partisan grounds, and that it would be at least unwise to make changes upon such grounds.

Thus the first Democratic Speaker for many years, though strongly pressed to use these offices as "patronage," and free to do it so far as the then existing rule was concerned, recognized the expert nature of the duties and, regarding the efficiency of the service a much more important consideration than the partisan advantage of securing a little official patronage, made no changes in the reporting force of the House. There were peculiar reasons at the beginning of the Forty-fourth Congress for the appointment of reporters in political accord with the Democratic majority. The investigations instituted were directed to a great extent against the mismanagement and malfeasance of Republican officials, extending through many years.

It was urged upon the Speaker that the most confidential relations ought to exist between the official reporters, especially those reporting the proceedings of these committees, and the majority on such committees and in the House; but Mr. Kerr, knowing the skill and efficiency of the old force, appreciating the importance of their work, and trusting to their honor and their sense of official duty, disregarded those appeals, and, as I have said, made no changes. Mr. Kerr died before the end of the Forty-fourth Congress, and the gen-

tleman from Pennsylvania [Mr. RANDALL] was elected Speaker of the House. He took the same view of this subject that was taken by his illustrious predecessor, and made no changes whatever in the force, except that when Mr. Hincks, one of the oldest of the reporters of debates, died in office the Speaker appointed his successor.

In the Forty-sixth Congress the House adopted a resolution directing the Committee on Rules to revise the rules of the House, and, for this purpose, to sit during the recess. That Committee on Rules consisted of Mr. RANDALL, (the Speaker,) and Messrs. STEPHENS, BLACKBURN, GARFIELD, and FRYE, all gentlemen of great experience in the House. At the beginning of the last session of that Congress the committee reported the revised rules, which were considered and adopted by the House and which are now in force substantially as then adopted. The rule in regard to the appointment and removal of the official reporters appeared in the revision as Rule XXXVI, clause 1, and is as follows:

The appointment and removal for cause, of the official reporters of the House, including stenographers of committees, and the manner of the execution of their duties, shall be vested in the Speaker.

This rule received the unanimous approval of the Committee on Rules, the gentleman from Pennsylvania, [Mr. RANDALL,] then Speaker, joining in placing this limitation upon his own power; and it also received the unanimous approval of the House. It embodied in the new rule, in terms, the construction which Speaker Blaine had put upon the old rule, namely, that the power of removal could be exercised only "for cause." When this Congress met the rules of the preceding House of Representatives were adopted as our rules until otherwise ordered. There has been no change made by this House in Rule XXXVI. The stenographers for committees, having been appointed originally to continue in office "until otherwise ordered" by the House, could have been removed by the Speaker only by virtue of his authority under the rule, and the rule gives him authority to remove "for cause" only. But what are the facts? On the 23d day of March last Mr. Hayes, without any previous intimation on the part of the Speaker, received the following letter:

SPEAKER'S ROOM, HOUSE OF REPRESENTATIVES,
 Washington, March 23, 1882.

SIR: You are hereby notified that you have been this day removed for cause as a stenographic reporter of committees of the House of Representatives.

J. WARREN KEIFER,
 Speaker House of Representatives.

HENRY G. HAYES, Esq.,
 Stenographer, House of Representatives.

Mr. Hayes addressed to the Speaker the following note of inquiry:
 WASHINGTON, D. C., March 24, 1882.

SIR: I respectfully ask to be informed of the cause for which I am removed, by your notification of yesterday, from my official position as stenographic reporter of committees of the House of Representatives.

Your obedient servant,

HENRY G. HAYES.

Hon. J. WARREN KEIFER,
 Speaker of the House of Representatives.

To this the Speaker made the following reply:

SPEAKER'S ROOM, HOUSE OF REPRESENTATIVES,
 Washington, March 24, 1882.

SIR: I am directed by the Speaker to acknowledge the receipt of your note of this date, and to advise you in reply that he does not think that any public or private purpose will be subserved by furnishing a detailed statement of the cause or causes which have led to your removal as stenographic reporter of committees of the House.

He is desirous, however, that you should not be led by the language of the letter of removal to infer that any criticism was intended to be made upon your private character.

Very truly, yours,

C. C. ROYCE,
 Private Secretary.

HENRY G. HAYES, Esq.,
 Washington, D. C.

Mr. Hayes replied to this as follows:

WASHINGTON, D. C., March 28, 1882.

SIR: I have waited for the last five days in the hope that you would, on further consideration of the rules of the House, recall your letter of the 23d instant, notifying me that you had removed me from my office.

As you have not assigned any cause for your action, have refused to assign any, and have (so far as I am aware) none to assign, I beg, respectfully, to inform you that I do not recognize its legality.

Very respectfully,

HENRY G. HAYES.

Hon. J. WARREN KEIFER,
 Speaker House of Representatives.

On the 13th of April last, while absent on sick leave, Mr. Andrew Devine, the other official stenographer for committees, received the letter set out below.

To this letter Mr. Devine made no reply; but some days later the gentleman from Kentucky [Mr. CARLISLE] offered on his behalf the following preamble and resolution:

Whereas Mr. Andrew Devine, a member of the official reporting corps, has received the following notification:

SPEAKER'S ROOM, HOUSE OF REPRESENTATIVES,
 Washington, April 13, 1882.

SIR: Your services as acting stenographic reporter for committees of the House of Representatives are dispensed with from and after this date. You are not regarded as holding any continuing valid appointment for this Congress, but assuming that you do, you are removed for good and sufficient cause.

Very truly, yours,

J. WARREN KEIFER,
 Speaker House of Representatives.

ANDREW DEVINE, Esq.,
 House of Representatives, Washington, D. C.

And whereas it is claimed on behalf of Mr. Devine that, while he, like all the other official reporters, is of course removable by the House at its pleasure, with or without cause, the action of the Speaker in the premises does not constitute removal for cause within the true meaning and intention of the rule: Therefore, *Resolved*, That the Committee on the Judiciary be instructed to make full inquiry into the case of Mr. Devine, and the validity of the action of the Speaker therein, and to report without delay and at any time their conclusions, with such recommendations as they may deem proper.

This resolution was adopted by the House unanimously on the 25th day of April last, and a similar one in the case of Mr. Hayes had been previously referred to the Committee on the Judiciary; but that committee has not as yet obeyed the instruction thus given.

The correspondence which I have here presented is, I understand, all that has passed between the Speaker and the officers removed. It will be seen that the Speaker has in none of these letters assigned any cause for his action, and that when Mr. Hayes asked him to state the cause of his removal the Speaker declined to do so.

Was there any real cause for these removals? It is well known to all the older members of the House that Messrs. Hayes and Devine are gentlemen of high character, of unquestioned integrity, and of great intelligence and skill in their profession. During my seven years' service as a member of the House I have had frequent occasion to observe and to test their skill, efficiency, and trustworthiness. I have never heard a single complaint against either of them, and I do not believe that two more intelligent, efficient, or trustworthy stenographers were ever in the employ of any legislative body.

Members generally, it seems to me, have but little knowledge of the character or the extent of the work which these officers have performed in the service of the House; and this is perhaps to be expected, because the attention of gentlemen is generally concentrated upon the work of the committees of which they are themselves members, and as a rule they know little of the labors of others. We all know, however, how busy we keep the five reporters who sit at this desk reporting our debates; yet in several sessions within the past few years the aggregate stenographic work done for the committees of the House has largely exceeded the debates in volume, and in at least one instance it has been nearly equal to the debates of the House and the Senate combined. And, lest some of my friends on the other side should say that this occurred only during the period when the Democratic party was carrying on those investigations of which they so often complain, I will inform them that the last session of the Forty-third Congress, when they still had control of the House, was one of those sessions of which I speak, when the stenographic work done for the committees exceeded the debates in volume. Of course the two official stenographers could not perform all or nearly all this work themselves; that would be impossible; but, as they state in their letter, submitted here by the gentleman from Pennsylvania, [Mr. RANDALL,] and as I know, they have always done the most important and difficult work, and they have had to supervise the reporting and printing of it all—a very onerous part of their official duties.

The character of these officers being such as I have stated, and the Speaker having refused or failed to assign any cause for their removal, the presumption is that no cause existed for his action; and that action was therefore void under the rule. The discussion to-day as to the proper construction of the rule shows that gentlemen have not considered the question carefully, or examined the law governing in the premises. For instance, the gentleman from Maine [Mr. REED] says that "the meaning of the phrase 'for cause' is to notify the Speaker that, although he is acting upon his own honor and conscience, nevertheless it will be his duty to determine deliberately that there is cause for his action. He is the sole judge of the sufficiency of that cause." If this be the meaning of the words "for cause" in the rule, then clearly they are surplusage, and might just as well have been left out; for they do not in any way change the sense of the old rule or limit the authority of the Speaker in the matter, as they were designed to do.

If the Speaker is the sole judge of the existence or the sufficiency of the cause, if he may determine it in his own conscience, (or without his conscience, if you please, for conscience has nothing to do with this matter,) and if he may act upon this determination without informing the officer to be removed, or the House, whose servant he is, of the cause, then he may remove without cause, and his power is unrestricted and absolute. I submit that this is not the law. The words "for cause" mean something, and the chairman of the Committee on the Judiciary has not stated their meaning correctly. The words "for cause," in the sense in which they are used in House Rule XXXVI, are technical and have received judicial interpretation. In the impaneling of petit jurors the plaintiff and the defendant are allowed a certain number of peremptory challenges, and in addition to this each side may challenge a juror "for cause." When a juror is challenged "for cause" it must be for a cause which, under the statute, disqualifies him to sit as a juror in the case; the challenging party must show that the juror challenged "for cause" is by the statute rendered legally incompetent to sit on that jury.

Where the law allows a peremptory challenge the cause rests solely in the discretion of the challenging party, and need not be stated; but where the challenge is "for cause" the cause must be stated. The rules of the House of Representatives do not prescribe what shall be "cause" for the removal of an official stenographer; and the courts have held that in the absence of any provision of law or

any rule upon this subject, the cause "must be determined with reference to the nature and character of the office and the qualifications requisite to fill it." (The *State ex rel. Gill vs. The Common Council of Watertown*, 9 Wisconsin Reports, 254.) So, in the case of *ex parte King* (35 Texas Reports, 657) the court held that "there must be such incompetency, or such non-feasance, or malfeasance, or corruption, or partiality in his office as will amount to a forfeiture of the right to enjoy it. Such cause only can rightfully call into exercise the power to remove."

This is the common-law rule and is laid down by all the courts so far as I have been able to examine the current of authorities upon this question. In the absence of any provision of rule or law prescribing the cause or causes for which these officers may be removed the common-law rule prevails. The Speaker having no power to remove an official stenographer except "for cause," could only exercise the power of removal for some such cause as the common-law rule requires, that is, a cause disqualifying the officer for the proper performance of the duties of his office. Such cause must be assigned and must exist in order to justify the exercise of this power. As the court say in the case of *King*, already cited:

It is not enough that the district judge [the removing power] may think that the officer has done something for which he ought to be removed. The fact must be so.

No such cause as the common-law rule requires, nor in fact any cause whatever, having been assigned for the removal of Mr. Devine or Mr. Hayes, the Speaker's action in the matter is void and of no legal effect.

The distinction between the power to remove "for cause" and the power to remove absolutely is clear and unmistakable. If the Speaker were authorized to remove absolutely any of the subordinate officers of this House, he could of course exercise that authority at his own discretion, being responsible, as the gentleman from Maine [Mr. REED] says, only to his own conscience; but in the case of the official stenographers he has no such power. Under the rule he can only remove them "for cause." The "cause" must be such as I have stated, it must be assigned and it must in fact exist. I have said that the words "for cause" in the sense in which they are used in our rule have received judicial interpretation, and I have incidentally mentioned a leading case upon this subject, to which I now more particularly call the attention of the House, the case of *The State ex rel. Gill vs. The Common Council of Watertown*, (9 Wisconsin Reports, 254.) Mr. Gill was the superintendent of schools of that city. The common council was authorized to remove the superintendent "for due cause" only.

The chairman of the Committee on the Judiciary tells us that there is a great difference in meaning between the phrases "for cause" and "for cause specified." I should like to hear him state first the distinction between "for cause" and "for due cause," and then the difference between "due cause" and "good and sufficient cause," the words used by the Speaker in removing Mr. Devine. There is none whatever. The word "cause" in such a connection implies a due cause; and the words "for due cause" have no other signification than the words "for cause." The definition of "cause," as given by Webster, is, "that which produces or effects a result;" "that from which anything proceeds and without which it would not exist." This is the meaning of the word "cause" as used in the rule, and as applied to the power of the Speaker in this case it implies the existence of some fact or cause which would disqualify the officer for the proper performance of his duties, and thereby effect or produce the result of his removal.

In this Wisconsin case, as I have said, the common council had power to remove "for due cause," but neither the statute nor the city ordinances had prescribed what should constitute "due cause." The council undertook to remove Mr. Gill, and assigned what they alleged to be "due cause" for their action. They furnished Gill a copy of certain charges which were made against him, and cited him before the council to answer them. He appeared, justified as to some of the charges and denied others. After he had been heard the council passed a resolution, as follows:

Whereas certain charges have been preferred to the common council of the city of Watertown against Charles R. Gill, superintendent of the schools of said city, and due notice and opportunity have been given to said Gill to appear before said council and make his defense to said charges, and the said Gill having appeared and submitted his defense; and

Whereas, in the opinion of this council, due cause exists for the removal of said Gill from said office for official misconduct: Therefore,

Resolved, That the said Charles R. Gill be, and he is hereby, removed from the office of superintendent of schools of the said city of Watertown, and said office of superintendent of schools is hereby declared vacant.

It will be seen that in this action of the council there was no specification of the particular cause for which the removal was made, but merely a general statement that it was made "for due cause," just as the Speaker in his letters of removal to Messrs. Devine and Hayes says that his action is taken "for good and sufficient cause" and "for cause." But Gill had notice of the charges against him and an opportunity to be heard, while our stenographers have had nothing of the kind. The council, however, not merely failed, but (like the Speaker) refused to specify the "cause" for their action in removing the superintendent, and Gill sued out a mandamus to compel them to restore him to his office. The supreme court of Wisconsin declared the action of the common council to be

null and void, and reinstated Gill in the office from which the council had attempted to remove him. In their opinion in the case the court say:

But it is contended by the counsel for the respondent that in removing the relator the council exercised a discretion which the law vests in it and that the court cannot by mandamus review or control that discretion, and if the premises assumed are correct, we think the conclusion of law follows; for, though there are many cases that have gone much further, particularly with reference to the acts of officers other than judicial, yet we think the rule is now well established that where the law vests in any officer or body a discretion with reference to a subject this discretion will not be controlled by mandamus. But we do not think this rule applicable to this case, for the reason that the law does not vest in the council the power to remove the officers of the city at its discretion. It was said on the argument that the council had the absolute power of removal, and if this were true it would undoubtedly be a case of discretion with which we could not interfere. But it seems to us that the council had no such power, for on looking at the source of their authority, in section 6, chapter 327, Private Laws of 1857, it appears that they have the power to remove only "for due cause." This is a clear limitation of the power of removal, and if the council should remove without due cause its action would be entirely unauthorized.

In the course of this opinion the court discuss further and define the true limits of the discretion vested in the removing power in such cases, and lay down the following propositions:

A power to remove "for due cause" is not a power to remove at discretion. When a party or body having the power to remove for "due cause" do undertake to remove an officer for "due cause" and for "official misconduct," but cannot show for what cause or misconduct the officer was removed, their decision will be reversed.

Where a power to remove "for due cause" is given to inferior officers and tribunals the words "for due cause" operate as a limitation on the power; and yet if the authority to determine finally what is due cause were given to the same body vested with the power of removal the limitation would be entirely defeated.

What is "due cause" for the removal of an officer is a question of law, * * * and, in the absence of any statutory provision as to what shall constitute such cause, it must be determined with reference to the nature and character of the office and the qualifications requisite to fill it.

I again ask the attention of the House to the case of *ex parte King*, reported in 35 Texas Reports, page 657. This case grew out of the removal of the clerk of a district court by the judge of that court. The judge was authorized to remove the clerk "for cause, to be spread upon the minutes of the court." I have already shown that Mr. Speaker Blaine held that even under the old rule, before the words "for cause" were inserted, the Speaker could only remove the official reporters "for cause," to be "entered on the Journal," doubtless having in his mind the principle of law laid down in the cases I have cited. In this Texas case the requirement that the cause should be "spread upon the minutes" was merely directory. All official acts of the court must be made of record.

The essence of the provision limiting the power of removal was that it should be exercised only "for cause;" just as the Speaker's power in the case of the official stenographers is limited by Rule XXXVI. The judge undertook to remove the clerk, and entered the "cause" of record in the following language: "Whereas it appears to the satisfaction of the court that the clerk, William H. King, is entirely incompetent to discharge the duties of said office, and that his habits of life are dissipated to such a degree as to still further unfit him for said office;" and for these reasons or "causes" declared him removed. Mr. King appealed to the supreme court of the State, on the grounds that the "cause" alleged did not exist in fact, and that he had had no opportunity to be heard in self-defense. On appeal the supreme court set aside the order of the judge below and reinstated King in office. The court in deciding the case uses this language:

Another and a vital consideration remains. It cannot be supposed that the framers of the constitution [of the State] intended to clothe the district judge with the power arbitrarily or capriciously to remove from office an officer elected by the people. Yet the judge has the power to remove. What cause, then, authorizes the exercise of the power? The answer to us seems to be plain. * * * It is not enough that the district judge may think that the officer has done something for which he ought to be removed. The fact must be so. There must be such incompetency, or such nonfeasance, or malfeasance, or corruption, or partiality in his office as will amount to a forfeiture of the right to enjoy it. Such cause only can rightfully call into exercise the power to remove. It is quite clear from the record in this case that the court did not extend to the clerk the right of defending himself against the charges preferred against him. * * * It is not shown that any opportunity was afforded him to answer or to question the sufficiency in law or the truth in fact of the charges against him.

It will be seen that in this case the "cause" of the removal was assigned, (but without any specification of particulars,) and the removal was made for the "cause" alleged; yet the supreme court annulled the action of the district judge in removing King, upon the ground that he had not had an opportunity to defend himself against the charges, or to show that they were unfounded, so that the existence of such a "cause" as would justify the action of the removing power had not been established, and therefore the removal was void and of no effect. In the Wisconsin case the "causes" were assigned and the officer against whom the charges were made was given a hearing; but the council, in making the removal, did not specify the particular cause or causes for which the removal was made; and in that case also the action of the removing power was declared null and void.

Apply the rule of law laid down in these cases to the action of the Speaker in removing the official stenographers. In both the Wisconsin case and the Texas case the action of the removing power was much more defensible than the action of the Speaker here; because in both those cases the "cause" was stated, and in one of them the party to be removed was given a hearing; while the Speaker has not

only failed to state the "causes" for his removal of the stenographers but has refused to do so, and of course those gentlemen have had no opportunity to be heard in self-defense. Nevertheless, as I have shown in both the cases I have cited, the act of removal was declared null and void. In like manner this House ought to set aside the action of the Speaker in removing two of its official stenographers, because that action was arbitrary, unjust, and without warrant in law or in the practice or the rules of the House.

The gentleman from Maine, [Mr. REED,] the chairman of the committee which is supposed to have had this matter under consideration for the last three or four months, has undertaken to save the House from "confusion of thought" upon the subject, by giving us what he calls an accurate statement of the law. He says:

I do not care what the intention of the Committee on Rules was when they inserted the words "for cause." The words "for cause" have a distinct, positive, technical meaning. The language is precise. It is not "for cause specified, to be placed upon the Journal." It is not for "specified cause." It is "for cause," solely and simply. Now, the law is accurately stated in the two hundred and fiftieth paragraph of Dillon on Municipal Corporations and in the case cited in the note. It is there declared that the expression "for specified cause" requires a statement of the cause and notice to the party. But if it be "for cause" only and simply, as it is in our rules, then it is only a question for the conscience of the man vested with the power of removal.

The chairman of the Committee on the Judiciary states his position very clearly. He does not care what the words of our rule were intended to express. He plants himself upon the restricted technical meaning of the words "for cause" simply and solely, and he tells us the very paragraph in which we can find the law on this point "accurately stated." Now, Mr. Chairman the two hundred and fiftieth paragraph of Dillon on Municipal Corporations is in these words:

Where an officer is appointed during pleasure, or where the power of removal is discretionary, the power may be exercised without notice or hearing. But where the appointment is during good behavior, or where the removal can only be for certain specified causes, the power of removal cannot, as will presently be shown, be exercised, unless there is a charge against the officer, notice to him of the accusation and a hearing of the evidence in support of the charge and an opportunity given to the party of making defense.

This is the whole of the paragraph referred to. It will be seen that the first part of the proposition laid down by the gentleman from Maine, that the expression "for specified cause" requires a statement of the cause and notice to the party, is contained in this paragraph; but the second part, the only part of his proposition that has any application here, namely, that "if it be 'for cause' only and simply, as it is in our rules, then it is only a question for the conscience of the man vested with the power of removal," this doctrine which he states so confidently as settling the question of the Speaker's power under the rule, is not found in Dillon at all! The gentleman's language certainly conveys the idea that this doctrine of the technical meaning of the expression "for cause" is explicitly laid down by Dillon, and the doctrine itself is so repugnant to every principle of natural justice that it would require a very explicit statement by very high authority to secure its acceptance as law.

I have shown that no such statement is made in Dillon. But I have heard some strange views announced here, and possibly it may be argued that, though not expressed, this doctrine is implied in the first sentence of this paragraph, which speaks of cases where the power of removal is "discretionary." Now, sir, this paragraph in Dillon is copied, part of it almost verbatim, from the syllabus and the opinion in the leading case cited in the note, the case of *Field vs. The Commonwealth*, 32 Pennsylvania. The first sentence of Dillon's paragraph is taken from a part of the opinion in that case which I shall presently quote, and it will be seen that the doctrine there relates to such a power of appointment and removal as is possessed by the President of the United States, or by such officers as collectors of customs, or the Clerk or the Doorkeeper of this House under Rule II, and has no reference whatever to a power limited by the requirement that it shall be exercised only "for cause."

Therefore I am fully warranted in saying that this doctrine, for which the chairman of the Committee on the Judiciary has referred us to Dillon, is a doctrine which the text of Dillon neither expresses nor implies.

A careful examination of the leading cases cited in the note to this paragraph shows that they also fail to sustain the proposition that where the power of removal is to be exercised for cause, "it is only a question for the conscience of the man vested with the power of removal." That doctrine seems to have emanated solely from the gentleman from Maine. I have said that paragraph 250 of Dillon is copied substantially from the opinion and the syllabus in the case of *Field vs. The Commonwealth*, (32 Pennsylvania Reports, 478,) the leading case cited in the note. That syllabus, so far as it relates to removals from office, is as follows:

The superintendent of common schools [a State officer in Pennsylvania] has no power to remove a county superintendent except for neglect of duty, incompetency, or immorality; and before a removal can take place there must be a charge against the officer, notice to him of the accusation, a hearing of the evidence in support of it, and opportunity given to the party of making his defense.

This case was a *quo warranto* at the suit of the Commonwealth of Pennsylvania, *ex relatione* Jonathan K. Krewson, against William A. Field, to inquire by what authority the defendant claimed to exercise the office of county superintendent of common schools for the county of Schuylkill.

The information set forth that the relator, Jonathan K. Krewson,

was duly elected and commissioned as county superintendent of common schools for the said county of Schuylkill for the term of three years from the first Monday of June, 1857; and that he entered upon and continued to perform the duties of said office until the 2d of November, 1858, when he received the following notice from the superintendent of common schools:

PENNSYLVANIA, DEPARTMENT OF COMMON SCHOOLS,
Harrisburg, November 2, 1858.

SIR: You are hereby removed from the office of county superintendent for "neglect of duty and incompetency." You will immediately deliver to your successor, W. A. Field, esq., the books of "county certificates" and "provisional certificates" in your hands, and the marginal references or "duplicates" of all certificates of either kind issued by you since the first Monday in June, 1857; together with all other official records or documents in your possession, or under your control, taking his receipt for the same in detail; upon the presentation of which at this department your arrearages of salary and express charges will be adjusted.

Your obedient servant,

H. C. HICKOX,
Superintendent Common Schools.

To J. K. KREWSON, Esq.,
Minersville, Schuylkill County, Pennsylvania.

The information further set forth that the relator had not received any previous notice of any charge against him either of incompetency or neglect of duty, nor, as he averred and believed, had any such been made; nor had he ever received from the superintendent any specification of any fact, mistake, or act of commission or omission whereon any such charge could have been based; but that the attempt so to remove him from his office was wholly without charge, specification, trial, or hearing of any kind whatever. That the superintendent, although subsequently requested, had refused to make known to the relator any specification to sustain the allegations of incompetency and neglect of duty, or to give him a hearing upon both or either of said charges.

The defendant by his answer neither denied nor admitted that part of the information which set forth the removal of the relator without charge, specification, trial, or hearing, but alleged:

First, that the State superintendent of common schools had full power to remove the relator from the office of county superintendent whenever he became satisfied that the said relator was incompetent or that he neglected the duties of his said office; second, that the said State superintendent did become satisfied that the said relator neglected his duty as county superintendent and was incompetent for the proper performance thereof, and did therefore remove the said relator from the said office; third, that there being a vacancy in the office of county superintendent of common schools for the county of Schuylkill, the State superintendent had the power to fill said vacancy, and did fill the same by the appointment of this defendant.

To this answer the relator demurred, and the court below, after argument, gave judgment for the Commonwealth; whereupon the defendant removed the cause to the supreme court of the State. The supreme court of Pennsylvania at that time consisted of the following distinguished jurists: Walter H. Lowrie, chief-justice, and Justices George W. Woodward, James Thompson, William Strong, (afterward a justice of the Supreme Court of the United States,) Gaylord Church, and John M. Read. The opinion of the court in this case was unanimous, with one exception, and no dissenting opinion was filed. The opinion was delivered by Mr. Justice Read, and the doctrine there laid down by this distinguished jurist differs widely from that of his namesake, the gentleman from Maine. After reciting the facts of the case and the statute of Pennsylvania, the court said:

Where an appointment is during pleasure, or the power of removal is entirely discretionary, there the will of the appointing or removing power is without control, and no reason can be asked for nor is it necessary that any cause should be assigned. This branch of the subject has been so fully discussed in the Supreme Court of the United States in *ex parte Duncan N. Hennen*, 13 Peters, 230, that it is only necessary to refer to it; and, by analogy to the power of removal exercised by the President, collectors may remove their subordinates without consulting the Secretary of the Treasury, though the approbation of the latter be necessary to an appointment; and it is not a breach of official duty on the part of the collectors to refuse to report their reasons for removing these subordinate officers.

The same doctrine is laid down by the court in exchequer chamber in the case of the *Queen vs. The Governors of the Darlington Free Grammar School*, 8 Adolphus & Ellis, 682. It was there contended that the governors of the school could not remove a schoolmaster without his being summoned to answer the charge, nor without having a reasonable time to answer, nor, lastly, without proof of the charges brought against him; and the court said that, if he held his office during good behavior, such steps would have been necessary to precede his removal. These views were supported by Bagges's case, 11 Coke's Reports, 98, (6,) and Dr. Gaskin's case, 8 Term Reports, 209.

But the other rule, laid down in Bagges's case and Dr. Gaskin's case, and affirmed in the case just cited, is as clearly the true one, where the appointment is either during good behavior or for a limited or unlimited period, or where the removal can only be for certain specified causes.

Upon this question the authorities in England and in this country are clear, distinct, and emphatic, and in entire accordance with our free institutions.

The court cite the case of *Ramshay*, an English county court judge, who, upon charges presented by certain inhabitants of the borough of Liverpool, was removed by the chancellor of the duchy of Lancaster, after notice and a full hearing. *Ramshay* applied to the Court of Queen's Bench for a rule to show cause why an information in the nature of a *quo warranto* should not be filed against Pollock, who had been appointed to succeed him; and the formal instrument of removal, under the hand and seal of the chancellor, was set up as conclusive. This case is fully reported in 18 Queen's Bench Reports, 173, (83 English Common Law.) Lord Campbell, in giving judgment in that case, said:

We are of opinion that this instrument is not absolutely conclusive; that the chancellor, in the exercise of the authority to dismiss from office, is, in the lan-

guage of the judges in *Rex vs. Warren*, 1 Cowp., 370, subject to the control of this court, and that (as is there said) we may "inquire into the cause and manner of a motion." The instrument being drawn up in the words of the act of Parliament, we may presume that the chancellor has duly exercised his jurisdiction till the contrary is proved. But we think that it would have been open to Mr. Ramshay to show that he was removed without notice of any charges against him; or without an opportunity of being heard in his defense; or that no evidence was adduced to support the charges; or that the complaints against him were not for inability or misbehavior in his office, and were of such a nature that, if proved or admitted, they could not disqualify him for his office, or amount to inability or misbehavior within the meaning of the act of Parliament.

The chancellor has authority to remove a judge of a county court only on the implied condition prescribed by the principles of eternal justice, that he hears the party accused. He cannot legally act upon such an occasion without some evidence being adduced to support the charges, and he has no authority to remove for matters unconnected with inability or misbehavior in the office of county court judge. Where the party complained against has had a fair opportunity of being heard—where the charges, if true, amount to inability or misbehavior, and where the evidence has been given in support of them, we think we cannot inquire into the amount of evidence or the balance of evidence; the chancellor acting within his jurisdiction being the constituted judge upon this subject.

Again, the Pennsylvania court say "We find principles of a kindred character laid down by Chief-Justice Marshall, of Kentucky, in the case of *Page vs. Hardin*, (3 B. Monroe's Reports 648,) where the governor of Kentucky undertook to decide that the secretary of state had abandoned his office, (the tenure of which was good behavior during the term for which he was appointed,) and having thus created a vacancy, appointed another person in his place;" and they quote from the opinion in that case as follows:

We are unwilling to believe that the governor intended without cause to remove an officer appointed for a term of years before the term had expired. That he possessed the power of removal is conceded; but the power is to be exercised upon cause shown. It exists only where the officer fails or neglects faithfully to perform the duties of his office. It is true that the executive is made the judge, and that his "opinion" or judgment is conclusive so far as relates to the question of removal. But that judgment is not to be pronounced without notice, without any charge or specification, and without any opportunity given to the officer to make his defense. The reputation and the right of the incumbent to the office for the term specified in his commission are involved, and he has a right to know the accusation and to be heard in his defense. The present executive understood these rights too well and appreciated them too highly to be guilty of violating them. If he was on his trial before the senate on impeachment for doing so, it would be difficult to convince any one that he intended to commit any such act of oppression.

This is the language of Chief-Justice Marshall, of the Kentucky court of appeals; and the effect of the opinion in that case was to recognize the officer sought to be removed as still continuing in office, notwithstanding the action of the governor.

The supreme court of Pennsylvania, basing its decision upon these cases, used the following language in deciding the case of *Field vs. The Commonwealth*:

This is conclusive of the present question; for it is acknowledged that there was no charge or specification, no notice, no hearing, no evidence produced, nor any opportunity given the county superintendent to defend himself. All these were necessary before a removal could take place; and this appears to have been the construction originally placed by the State superintendent upon the section of the act of 1854 vesting the power of removal for specified causes in him.

The court therefore held that Krewson, the county superintendent of schools for Schuylkill County, had not been removed in accordance with law, and that he was still the legal incumbent of that office.

This case was decided upon "the principles of eternal justice," of which Lord Campbell spoke, which allow no man to be condemned without a hearing; and in concluding an opinion in another case Lord Campbell, referring to the same doctrine, said he "recollected hearing a very aged judge once say, and not irreverently, that the Almighty and Omniscient Being would not condemn our first parents without their being heard. That precedent had been always acted upon."

Applying the doctrines here laid down to the removal of the official stenographers of this House, we find that in their cases none of "the principles of eternal justice" were regarded by the removing power. The distinction which is set up by gentlemen in this debate between the power to remove "for cause" and the power to remove "for specified cause" is a mere quibble. It is not to be found in Dillon, and it is not to be found in the leading cases cited in the note to Dillon's statement of the law. Of the dozen or more cases there cited there are just two in which there is any discussion whatever of the meaning of "for cause." In one of those cases the court does undertake to find a distinction between "for cause" and "for cause shown;" but it says nothing about the "cause" being left to the conscience of the removing power; on the contrary, while holding that the exercise of the power was in that case solely in the discretion of the common council, the court says that it was evidently the intention of the Legislature to make them "responsible to public opinion by requiring them to enter the cause on their journal."

In the other of these two cases a State governor was the removing power, and the court declined to interfere, not on account of any special meaning that might be given to the words "for cause," but for a totally different reason, namely, that "to institute an inquiry as to the correctness of the cause for which the governor removed the defendant would be a direct attack upon the independence of the executive and a usurpation of power subversive of the constitution."

In the case of *Page vs. Hardin*, as we have seen, the court did review even the action of a State governor, where it came up as a

collateral issue, holding that "where individual right is involved, there can be no reasonable ground for denying to the judiciary the power and duty of deciding upon the legal validity or invalidity of any act of the executive department, whether done by an inferior or by the supreme executive officer." But, whatever may be the true rule where the judiciary is called upon to revise the action of a co-ordinate branch of a State government, that rule cannot, of course, have any application to the question of the right of this House to review and revise the action of its Speaker.

There is a distinction between a power to remove for a cause specified and a power to remove "for cause;" but that distinction relates only to the manner of selecting and designating the cause, not at all to the means of ascertaining its existence as a fact. Where, as in this Pennsylvania case of *Field vs. The Commonwealth*, the statute specifies the cause or causes for which a removal may be made, the officer vested with the power must allege and establish the existence of such particular cause or causes before he can work a legal removal, but where there is no specification of causes and the power is to be exercised "for cause," the task of the removing officer instead of being easier (as the gentleman from Maine argues) is really more difficult, and he must act with greater caution and circumspection, because he has nothing in the statute to guide him in determining what constitutes "cause" for the exercise of the power, but must rely upon his own judgment, being governed of course by the common-law rule already stated, that the cause must be one which, if established as a fact, would disqualify the person for the proper performance of the duties of his office.

Where there is no specification in the statute or the rule as to what shall constitute "cause" for removal, the selection and statement of the "cause" in the first instance is of course a matter for the judgment and conscience of the removing power; and in this sense only has the doctrine enunciated by the gentleman from Maine about the cause being a matter for the conscience of the removing power any foundation in law or reason. But when the officer vested with the power to remove has alleged his cause, then all the leading authorities hold and the "eternal principles of justice" require that it shall be such a cause as, if proved, would of necessity disqualify the person to be removed, and the removal cannot take legal effect until the party has received due notice, has been furnished with a specification of the charge or charges against him, has had an opportunity to make his defense, and the "cause" has been found to exist.

The very able opinion of the Kentucky court of appeals in the case of *Page vs. Hardin* (8 B. Monroe, 648) enunciates so clearly the principles governing this general question, that I desire to quote a few sentences from it in addition to the extract already presented in the opinion of the Pennsylvania court in the case of *Field vs. The Commonwealth*.

Hardin was appointed secretary of state by the governor of Kentucky, to hold office until the end of the governor's term, unless sooner removed for a breach of good behaviour—that is, he was removable only for cause. Hardin did not reside at the capital of the State, but undertook to perform his official duties, or most of them, by deputy, and after he had been in office for a year or more the governor by an executive order declared that the secretary of state, "by his failure, willful neglect, and refusal to reside at the seat of government and perform the duties of secretary, has abandoned said office, and said office in the judgment of the governor has become vacant for the causes aforesaid," &c.

The governor commissioned another man, Mr. Kinkead, to fill the vacancy thus created. Hardin filed a petition in the Franklin County court, setting forth the terms and conditions of his appointment, alleging that he had behaved himself well as secretary of state, and praying for a rule against Page, the second auditor, to show cause why a mandamus should not issue requiring him to draw his warrant for the quarter year's salary which Hardin claimed to be due him. Upon this petition a rule to show cause was made. Page responded, setting up the governor's order removing Hardin and appointing Kinkead in his place. The court held the response to be insufficient, and issued a peremptory mandamus. From this judgment of the county court Page appealed, and the court of appeals, after full hearing, affirmed the order of the court below, granting a peremptory mandamus against the auditor to pay Hardin his salary as secretary of state, the court holding him to be still the legal incumbent of the office. After reciting the facts of the case and discussing the undisputed power of the governor to fill a vacancy, the court say:

The secretary being removable for breach of good behavior only, the ascertainment of the breach must precede removal. In other words, the officer must be convicted of misbehavior in office. And we shall not argue to prove that in a government of laws a conviction whereby an individual may be deprived of valuable rights and interests, and may moreover be seriously affected in his good fame and standing, implies a charge and trial and judgment, with the opportunity of defense and proof. Such a proceeding for the ascertainment of fact and law, involving legal right and resulting in a decision which may terminate the right, is essentially judicial, and has been so considered here and elsewhere.

And we do not doubt that every proceeding for the removal of an officer for cause—that is, for official misbehavior—is essentially an exercise of the judicial power of the Commonwealth, and would therefore refer itself to the judicial department of the government, if not otherwise disposed of by the constitution or the laws.

I now ask the attention of the House to the opinion of another judicial tribunal of very high authority, the court of appeals of the State of New York, in the case of *The People ex rel. Munday vs. The*

Board of Fire Commissioners of the City of New York, (72 New York, 445.) This was an appeal from the judgment of the general term of the supreme court in the first judicial district reversing the proceedings of the board of fire commissioners of the city of New York, which had removed the relator from his position as a clerk in the fire department, and restoring him to said position, which proceedings were brought up for review by *certiorari*. The city charter contained a provision limiting the power of the fire commissioners to remove any of the regular clerks of the department by the requirement that the person proposed to be removed should be informed of the cause of his proposed removal and should have an opportunity to explain.

The commissioners before they undertook to remove Munday did give him a hearing, but instead of informing him of the cause for which they proposed to remove him, they called upon him to show cause why he should not be removed; and proceeded to make the removal. The counsel for the appellants contended before the court of appeals (as the gentleman from Maine contends here in regard to our rule) that this provision of the charter was "shadowy and unsubstantial;" and upon this point the court say:

We cannot agree with the counsel for the appellants that this restriction is "shadowy and unsubstantial." It was intended as a substantial limitation of the general power of removal conferred by the same section upon the several departments of the city government, and to secure the continuance in office of the persons named until a reasonable cause other than the pleasure of the heads of the departments or a change in the political character of the majority should exist for their removal.

Just as the provision in House Rule XXXVI in relation to the removal of the official reporters was intended to be a substantial limitation of the general power of removal conferred by another rule (No. II, adopted at the same time) upon the heads of certain departments of the service of the House, the Clerk, the Sergeant-at-Arms, the Doorkeeper, and the Postmaster, each of whom has an unrestricted power of appointment and removal in his own department.

The intent of the provision was to continue in the subordinate but important positions of the city government those who had proved themselves faithful and trustworthy as well as competent to discharge the duties of their stations.

Exactly the object and intent of the provision in our rule in relation to the official stenographers.

Courts cannot assume that the Legislature intended a vain thing and inserted a clause apparently materially affecting the power of the department, but which is in fact without efficacy.

That is the assumption which the gentleman from Maine asks this House to make in regard to its own action in adopting Rule XXXVI.

But the clause does effectually separate the regular clerks and heads of bureaus from those who hold their positions at the pleasure of the heads of the departments and gives them a more worthy as being a more secure term of office, and one depending to some extent upon good behavior. The removal must be for cause, and the process for removal is prescribed by the statute and must be pursued.

A later case decided by the same court lays down the same doctrine, the case of *The People, ex rel. Campbell, vs. The Commissioner of Public Works*, (82 New York, 247.) This was an appeal from the order of the general term of the supreme court affirming an order of the special term which dismissed a writ of *certiorari* to review the action of the commissioner of public works of New York City in removing the relator from the office of chief engineer of the Croton aqueduct. The commissioner charged that the engineer had been guilty of neglect of duty and of inefficiency "in allowing workmanship and material to be used in the construction of an arch inferior to the requirements of the contract," and called upon him for an explanation. The engineer explained that he was not responsible, for the reason that the work was not under his charge, but was under the charge of an inspector with whose appointment he had nothing to do and over whom he had no authority. The commissioner, not being satisfied with this explanation, declared the engineer removed for neglect, &c. It was contended that the discretion rested with the commissioner of public works, and that his decision upon the merits could not be reviewed by the court. Upon this point the court say:

Where there is any evidence before the [removing] officer from which an inference of incapacity or unfitness could be drawn 'so are not to reverse the decision because our own conclusion would perhaps have been different. But there must be some evidence to justify a removal; if there is none the removal is not for cause and the statute is violated.

The gentleman from Maine would probably argue that these cases turned upon the New York statute, but that statute was merely a re-enactment of "the eternal principles of justice," (or rather of some of them, for it did not go far enough,) and in the absence of any such statute the common-law rule would govern. The gentleman from Maine has assured the House that the expression "for cause" in connection with the power of removal from office has "a distinct, positive, technical meaning;" that "it is a legal term, the interpretation of which has been settled by the courts time out of mind;" and that it means something quite different from "for cause specified," or "for specified cause," or "for cause to be entered upon the Journal," or "for cause shown." (See also the case of *The People ex rel. The Mayor, &c., vs. Sidney P. Nichols*, 79 N. Y. Reports, page 582.)

If this be true is it not somewhat strange, Mr. Chairman, that the judges of two of the highest judicial tribunals in the land, the courts of appeal of the great States of Kentucky and New York, accustomed

to use legal terms with precision, should be ignorant of this peculiar technical meaning of these words "for cause," and should use them in the one case as implying official misbehavior which must be established by judicial process, and in the other as equivalent to the expression "for cause after the party to be removed shall have had notice and hearing," for that is substantially the provision of the New York statute?

The gentleman from New Jersey [Mr. ROBESON] has cited, as settling the question of the Speaker's power to remove an official stenographer, the following provision of the Revised Statutes:

No person shall be employed as a reporter of the House without the approval of the Speaker.

The gentleman could not have used that argument seriously, because he knows very well that that law was passed years ago to apply to an entirely different state of affairs, when the debates were reported and printed by contract and when it was thought desirable by the House to retain some control over the men who should be employed by the contractor to act as reporters upon this floor. But the gentleman says it is no matter what the law was passed for, because it was passed and it is on the statute-book. Well, sir, when he finds it there what does it mean? "No person shall be employed as a reporter"—by whom? If this provision has any application here it must mean either by the House or by the Speaker. Does the gentleman mean to argue that if this House should by resolution order the employment of any particular person as one of its reporters, the Speaker, by virtue of this law, could defeat the will of the House? If he does not then the provision must mean that no person shall be employed as a reporter by the Speaker without the approval of the Speaker; which is nonsense, and therefore, of course, cannot be the true meaning.

Now, although the gentleman from New Jersey thinks it is "no matter what the law was passed for," the Supreme Court of the United States thinks otherwise; for that court has decided in reference to the interpretation of the Revised Statutes (*United States vs. Bowen*, 10 Otto, 513) that—

When there is a substantial doubt as to the meaning of the language used in the revision the old law is a valuable source of information. When the meaning is plain, the court cannot look to the statutes which have been revised to see if Congress erred in that revision, but may do so when necessary to construe doubtful language used in expressing the meaning of Congress.

Therefore, if the gentleman from New Jersey desires to ascertain the true meaning of this ambiguous provision as it stands in the Revised Statutes he will have to go back to the original act from which it was taken by the revisers, (who of course had no authority to alter its meaning,) and when he does he will find that it was passed to prevent the contractors from forcing objectionable persons upon the House as reporters of its debates, and has and can have no application to the present system under which our reporters are officers of the House.

Now, a few additional words about the facts of this matter. The gentleman from New Jersey [Mr. ROBESON] made an insinuation here against Mr. Devine, which was promptly and properly answered by the gentleman from Pennsylvania, [Mr. RANDALL.] The gentleman from New Jersey thought Mr. Devine could not have been sick because he saw him at the Capitol. The gentleman himself is enviably healthy; and probably he does not understand that others less fortunate are sometimes compelled to be here when they are unwell. Still the gentleman ought to be more considerate in his remarks; for on more than one occasion at this session he has spoken with feeling of his own experience of the injustice that may be done by uncharitable judgments based on appearances.

Mr. Devine was at the Capitol on the 12th and the 13th of April. On the evening of the 11th he obtained leave of absence for a few days on account of illness upon condition that he should supply a competent substitute, to be paid by him. About eleven o'clock next day he was called from his sick room by a messenger who announced that the Committee on Foreign Affairs had repudiated Mr. Dawson's report and had declined to accept Mr. Devine's substitute (who had arranged to relieve Mr. Dawson) because he was not an official reporter. Mr. Devine hurried to the committee room, but the committee had already adjourned. He saw the chairman, however, explained that this substitute was employed by permission of the Speaker, and arranged to have him in attendance to report the meeting next day. Accordingly, he came to the Capitol on the 13th and introduced his substitute and had him accepted by the chairman. Early in the afternoon he went home and fell asleep from exhaustion, and from his sleep he was awakened to receive the Speaker's letter announcing his removal for alleged "good and sufficient cause."

I state these facts for the information of the gentleman from New Jersey, who, of course, has given the matter but little attention; though it did happen that his ex-secretary was appointed on that same day to succeed Mr. Devine.

The gentleman from Iowa, [Mr. McCORD,] in his zeal in behalf of his constituent, Mr. Dawson, has made statements and insinuations which are unwarranted by the facts. He says that the extract which I have presented here from the proceedings of the Committee on Foreign Affairs is not a part of the record of the committee, but is "the report of what occurred by Mr. Hayes, Mr. Dawson's enemy," &c. Now, I am informed by gentlemen who were present that his report of what did occur is more than fair to Mr. Dawson; and if the gen-

tleman will look at the letter of Mr. Andem, the clerk of the committee, with which the extract concludes, he will find that, after waiting three weeks to see whether Mr. Dawson's work could not be corrected so as to be used, the committee called upon Mr. Hayes for his report of the proceedings "from April 5 to April 12, inclusive;" and it is the proceedings of April 12 that I have presented. It is true, I believe, that after standing for a month as a part of the record of the committee, this page was struck out at Mr. Dawson's own request; and it is upon this ground that the gentleman from Iowa speaks of it as a "pretended record." The gentleman tries to throw discredit upon the statement of Messrs. Hayes and Devine presented by the gentleman from Pennsylvania [Mr. RANDALL] by saying that "part of this very item is for work done before their removal." I have inquired into the history of this item, and I find that of the \$598 here proposed to be appropriated, about \$568 are to pay Mr. Andem for doing work in the Committee on Foreign Affairs, most of which was done when the official stenographers were not engaged with other committees, and which they employed this gentleman to do because they were themselves incompetent to do it. But the person who prepared this paragraph sought to cover up the real nature of the item by including a charge of about \$30 for work done by Mr. Andem some time in the winter in the room of the committee of which he was clerk—work done of his own volition and not at the request of the then official stenographers or with their knowledge.

This \$30, included here as a blind, is the "part of this very item" of which the gentleman from Iowa speaks, and by means of which he seeks to discredit the statement of two honorable gentlemen.

Again, the gentleman says that Mr. Dawson was "crowded conspicuously forward to the most difficult work." This also is a mistake. The Shipherd examination was far from being the most difficult work, and Mr. Dawson was not "crowded" into it. He went to the Committee on Foreign Affairs because he preferred to report there, for the reason that the work was question and answer, (to which he said he had been accustomed;) but even if he had not expressed this preference, it would have been necessary to send him to the Committee on Foreign Affairs when it resumed the investigation on the 5th of April, because that was the only committee then requiring stenographic work that had not already declined his services after trial. Again, the gentleman intimates that somebody kept Mr. Dawson in ignorance as to his right to revise his work before it went to the Printer. The fact is that he did revise every line of his manuscript before it was sent to be printed, and when, on one occasion, being hurried, he wished to send some pages unrevised, Mr. Devine insisted upon his revising it.

The gentleman from Iowa is unfortunate in his statements. He seems to have been misled by some person who has an interest in distorting and misrepresenting the facts of this matter, and who seems to be sadly lacking in "that candor and truth of statement" which the gentleman tells us is so conspicuous a feature in the character of his stenographic friend.

The gentleman talks about "conferences" between Mr. Shipherd and Mr. Hayes and "the attempt to crush Mr. Dawson," and makes a queer insinuation about a "conspiracy." If there was a conspiracy to make Mr. Dawson appear incompetent, it was one in which three important committees of this House and several members whose remarks before those committees were reported by this stenographer must have been engaged as coconspirators. The idea of a conspiracy to make a man who is competent to act as the official recorder of the proceedings of the committees of the House of Representatives write matter which the witness could characterize as "idiocy" and the members of the committee pronounced "ungrammatical" and "unintelligible!"

All this talk about "a conspiracy" and "conferences" and "attempts to crush" is of course unworthy of serious answer; yet, as Mr. Dawson has tried to help his case by circulating similar insinuations and statements through a periodical published in my own State, I will say here that Mr. Hayes informs me that he has never had any "conferences" or communications of any kind with Mr. Shipherd, except in the room and in the presence of members of the Committee on Foreign Affairs; that he has never had any part in or knowledge of any "conspiracy" or any "attempt to crush Mr. Dawson;" that he has never written or inspired any "Associated Press dispatches" about him; and, in short, that all such statements and insinuations are without foundation in fact. I am sorry that the gentleman from Iowa thought it necessary to make these unfounded statements and insinuations in order to defend Mr. Dawson.

I do not know Mr. Dawson, and I certainly have no prejudice against him. On the contrary, I think he is rather an object of sympathy, in having been appointed to a trying position the duties of which he is incompetent to perform; and my only object in presenting this extract from the proceedings of the Committee on Foreign Affairs was to call the attention of the House to the fact that this appropriation was made necessary by the arbitrary and illegal action of the Speaker in removing Messrs. Hayes and Devine.

I am glad to learn from the gentleman from Wisconsin [Mr. WILLIAMS] that the Speaker has changed his mind since he wrote his letter to Mr. Hayes, and is now "willing and anxious" to state the causes for that action. These gentlemen are entitled to know why they were removed so summarily and with so little consideration for their feelings or their rights. They are entitled to know the charges

against them, if any, and to have an opportunity to answer, and this House is entitled to know the "causes" for which it has been deprived of the services of two of its most faithful and efficient officers.

Mr. Chairman, this is not merely a question of whether this man or that shall be employed in the service of the House. There is an important principle involved. The Republican party, in its national convention held in Chicago in 1850, adopted this resolution:

Resolved, That the Republican party, adhering to the principles affirmed by its last national convention of respect for the constitutional rules covering appointments to office, adopts the declaration of President Hayes: that the reform of the civil service should be thorough, radical, and complete. To this end it demands the co-operation with the executive department of the Government, and that Congress shall so legislate that fitness, ascertained by proper practical tests, shall admit to the public service.

The two fundamental essential principles of civil-service reform are: (1) original appointments on the special basis of fitness; and (2) security of tenure during efficiency and good behavior—that is, removals only for cause.

Now it so happens that here in this popular branch of the legislative department of the Government (owing, perhaps, to the peculiar nature of the duties of our reporters requiring special training and skill) both political parties had recognized and enforced practically these two cardinal principles in connection with our official reporting corps for years before the general question of civil-service reform had attracted much public attention. All these reporters were appointed originally by Republican Speakers upon the special ground of fitness, and during the years that we had control of the House their fitness and efficiency were recognized and none of them were disturbed; but, on the contrary, the rule was amended so as to give them greater security of tenure, and that rule, so amended, has been adopted unanimously by the present House.

But, although the House had expressly declared that these officers were removable by the Speaker only for cause, the present Speaker has removed two of them, gentlemen of proved skill, efficiency, and trustworthiness, without cause so far as yet appears, and has appointed to succeed one of them, at least, a person who is shown by the records of a committee of this House to be incompetent to perform the duties of the office; and we are now called upon to appropriate money to pay a stenographer whose employment was rendered necessary by this official incompetency. If this House shall refuse or fail to disavow the action of its Speaker in this matter it will itself become responsible for that action, and will sanction by its indifference a most glaring violation of the principles that should control the civil service of the Government and of the pledges solemnly made in national convention by the party represented by the majority on this floor, and since reiterated in the State platforms of the same party in more emphatic terms.

The Little Kanawha.

REMARKS

OF

HON. BENJAMIN WILSON,

OF WEST VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 17, 1882.

The House being in Committee of the Whole on the state of the Union, and having under consideration the bill (H. R. No. 6242) making appropriations for the construction, repair, and preservation of certain works on rivers and harbors, and for other purposes—

Mr. WILSON said:

Mr. CHAIRMAN: I am sorry indeed that the Committee on Commerce concluded to drop the Little Kanawha improvement from this bill. As I understand it, they did it upon the ground that there was slack-water navigation under the control of a private corporation for about forty miles on that river. They forgot, however, that there is a very large stretch of country above that improvement which does as much for the commerce of the country as any river of its size and length in the country.

This matter was discussed in the last Congress, and a gallant fight was made against it by the gentleman from Iowa, [Mr. UPDEGRAFF.] But after an extended discussion and mature deliberation of the matter an appropriation was made for this purpose by a large majority of this House. What is the fact to-day? The Engineer has urged the importance of making this appropriation. The total cost of this dam is estimated at about \$80,000. Congress has already appropriated \$50,000, and that money has been expended on this improvement. If there is to be no further appropriation for the purpose of completing this dam, then I would like very much for the Government to make an appropriation to remove the obstruction from the river, for it is an obstruction in its present condition. The Government is committed to the policy of completing this improvement, as much so as any other improvement in the country.

Let me say to gentlemen here that the timber which comes down this river has found a ready market in Europe. Sawed lumber from

that river has gone to Pittsburgh by the millions of feet, and has floated down the Ohio River as far as Cincinnati and even farther.

I repeat, there is no river in the United States of the size and length of this river that yields more to the wealth and commerce of the country than this Little Kanawha. Its oil by the thousand of barrels has found a ready sale in the markets of the world. To the commerce coming down that river the country is indebted to some extent for the balance of trade in our favor and against European countries.

The Government has already given \$50,000 for this work, and the money has been about expended; \$30,000 more will complete the improvement and add exceedingly to the wealth and the prosperity of the country. The navigation of that river is now practically suspended by reason of the work already done by the Government. If the improvement is not to be completed, if this work is not to be carried out in good faith, when Congress made an indirect pledge to do so by making the last appropriation, we will continue to have the commerce on that river obstructed. We ask this appropriation in good faith.

That district, which I have the honor to represent, pays more taxes into the Federal Treasury than does any one of thirteen different States which I could name. I ask that there shall be no close corporation here. We were told by the gentleman from Michigan [Mr. HORN] the other day that this was not to be one of that kind of schemes described by—

O, tickle me, Toby,
Tickle me, do;
You tickle me
And I'll tickle you.

We have the material here for a large and valuable trade. It is said that there are forty miles of lock and dam navigation. Suppose that those locks and dams are there. I deny the policy proclaimed by gentlemen here that that is a reason why Congress should not complete this work.

Rivers and Harbors.

SPEECH

OF

HON. CHARLES R. SKINNER,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 25, 1882,

On the motion to adopt the report of the conference committee on the river and harbor bill.

Mr. SKINNER said:

Mr. SPEAKER: I feel that it is due to myself and my constituents to vote against the adoption of the report and to put upon record my objection to many of its provisions. I have voted against the bill at every stage of its passage, and shall continue to do so at every opportunity. No doubt it contains many provisions which, carried out, would be of lasting benefit to the commerce of the country. It would be surprising if it did not.

There are many works of national importance which should certainly receive national aid, but it is impossible for me to see wherein the interests of the country at large can be benefited by extravagant appropriations for nameless creeks and inlets which the wisest student must fail to find on his atlas. I am willing to vote for liberal appropriations for the improvement of ocean and lake harbors and our large navigable rivers when clearly shown that our commerce or our industries need them and will be proportionately benefited, but I cannot cast my vote in favor of a bill which seems to me to cover so much extravagance and waste.

I am opposed to the methods by which bills of this character are passed. They are given too little consideration, and are passed more through a common interest to secure individual appropriations by means which are degrading than any desire for the true welfare of the country. To put it in mild terms, the bill is in many respects extravagant, wild, and visionary, and I believe covers large appropriations for political and not public purposes. It is to-day rumored that if passed the President will refuse to sign it. I hope he will, and if I could be present I should most cheerfully vote to sustain the veto of the President, should he give the bill his disapproval.

Mr. Speaker, I have only to say that during the past month I have been by the bedside and grave of an only daughter. It is my only absence in all my legislative life. I am only here to arrange my private matters. Continued illness in my family and an anxiety for their welfare which I cannot escape command me to leave this part of my duty for another. I do it reluctantly and sadly, but I have no alternative. Could I remain, and should a veto of this measure be sent to this House, I should regard it a sacred and patriotic duty to cast my vote to sustain the President. On political questions only I am paired with my colleague, [Mr. FLOWER,] who is obliged to leave by advice of his physician. I trust this House will not do so unjust a thing to the Executive and to the country as to insist on this bill. It is wrong, it is wicked, it is extravagant.

Persecution of the Jews in Russia.

"Love thy neighbor as thyself."

SPEECH

OF

HON. SAMUEL S. COX,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 31, 1882,

On the persecution of the Jews in Russia.

Mr. COX, of New York, said:

Mr. SPEAKER: On the 22d of May, 1880, I offered the following resolutions, which passed this House:

Resolved, 1. That the President of the United States be requested to inform the Senate and House of Representatives, if the same can be done without detriment to the public service, whether he is in possession of any information showing that any American citizen or citizens professing the Israelitish religion have been expelled, by any order issued by the government of His Imperial Majesty the Czar of Russia, from the city of St. Petersburg, by reason of any decree expelling foreign and alien Jews from said city.

2. That, if it be not incompatible with the public service, the President be requested to communicate to this House all correspondence in reference to the proscription of Jews by the Russian Government.

The correspondence called for at that time was not forthcoming. It was late in the session. I was permitted, however, to examine the entire archives of the State Department and to make a collation of the facts there recorded. The result is embodied in my remarks during that session. This correspondence related to the Hebrews of Roumania and Morocco as well as of Russia. It developed the anxiety of the American Israelite about his brethren in other lands. It revealed the animus of that terrible persecution which Russia has permitted to go on since that time.

Of some of these persecutions I was last year an eye-witness to a limited extent. I saw the Russian fugitives on their way to their ancient city, Jerusalem, with all the agony of their fate and all the devotion of their faith. Hence my interest was enhanced.

The Department correspondence since that time has been fruitful on this theme; and the public press and people of two hemispheres have chronicled the facts and expressed the indignation of the best part of the world against this Slavonic outlawry, hatred, and vindictiveness against the ill-starred Hebrew race.

JEWISH PEOPLE AND INTERESTS IN THE UNITED STATES.

It was a part of my duty as a representative of a large Hebrew element in my own Congressional district still to pursue this inquiry.

There are of this ancient race in the United States 273 congregations, and there are 12,546 families, members of the same, representing 230,257 population. In New York City there are 60,000 Hebrews, with 20 congregations of 2,351 families. The value of the real estate which they own is by the census estimated at \$4,706,700 in the United States and \$1,611,000 in New York City, while of other property in the United States they possess \$1,497,878—New York City having \$1,042,000 thereof. They have 200 schools for gratuitous instruction in their grand religion, with 735 teachers and 13,386 children attending them—1,998 being in New York City. So that it will appear at once from the thrift, and number, and the family, educational, and religious relations of this race, why a representative of at least one-third of the Hebrews of the great metropolis should, as a duty, interest himself in the well-being of this class of constituents.

But, sir, it requires no economic or statistical reason for my interest in this question. It concerns humanity. It is associated with the most wonderful people who ever lived upon our planet or suffered in the flesh. I make this presentation of their sympathies, sufferings, and condition as a race of splendid lineage, literature, and history, connected with the greatest events and movements in the advancement and regeneration of mankind.

This interest was renewed after a visit to the Holy City, and by a reply to my resolution which passed this House on the 30th of January, 1882.

The President's reply is found in Executive Document No. 192. It is dated May 2, 1882. This document contains some forty letters, running from 1872 to the present time. It reveals the legal, social, and other disabilities of the Russian Jews.

It is said that the imperial government, in its exceptional course toward the Jews, is not governed by grounds of religious intolerance, but on the idea that the Hebrews are harmful to the state, as they have a "natural tendency to *exploiter* the population in the midst of which they are settled." In other words, the Hebrew is regarded by Russia as an alien. He is afflicted with all the burdens and indignities of a subject caste. Few or no privileges are accorded. Certain portions of the country are designated where he may reside. In other portions he is prohibited.

The Hebrews in the Russian Empire number 2,348,000, or 3.06 per

cent. of the population. In Poland they constitute 13 per cent., in Augustowo 16 per cent., in the western provinces 9 to 13 per cent., in New Russia 2 to 9, and in Courland nearly 6 per cent.

JEWISH DISABILITIES IN RUSSIA.

It will be seen that where they are permitted to reside they are crowded. Inasmuch as they cannot acquire land without many restrictions, they have few chances for physical or other improvement. A general distribution of them would be of inestimable benefit—I mean the body of them; not the rich and educated, who get certain privileges in certain cities.

We have seen some of the poorer classes of these Hebrews at Castle Garden. Under our law some of these have been returned to Russia, because of their indigent and infirm condition. The Hebrews of the United States have not been backward in assisting this new class of immigration; but a sentiment has been aroused that the Russian Government should be held responsible in the forum of enlightened conscience for the evils connected with their treatment.

Their disabilities as to civil rights, such as liberty to trade and hold real property or live near the border, together with their sudden and capricious removals from place to place and from time to time, have added to the sufferings and disasters. They are prohibited from the employment of Christian servants. There are irritating rules as to costumes, domicile, and labor. The conscription is another form of oppression. Educational facilities and its rewards are denied. Although their religion is tolerated by ukase, they are forbidden to proselyte. Money is paid and taxes relieved where a Jew is proselyted by the orthodox Greek Church. Backsliding into the old faith is punished. The marriage ceremony is strictly regulated as against the Hebrew.

All these regulations foment hatred among the people against this race, and for this the government is responsible. All efforts at reform, however well intended and seconded by liberalists, have failed to elevate, in general, Russian-Hebrew life. Out of the Crimean war the name and hope of a new empire—a free Russia, *Svobodnaya Rossia*—was born. The birth was a failure. The Tartar spirit survives and controls. With pilgrim, monk, and priest, with Calmuck and Cossack, equally with burgher and soldier, the elder forces of this Asiatic element shape and dominate society.

Under this selfish and barbarous rule the Hebrew was cut off from many profitable employments, and under harsh sanitary laws and conditions it is to be wondered that this Hebrew race, so capable of enlightenment and improvement, as every land where they were and are allowed freedom and equality attest, should have degenerated?

Is it not then, sir, a pertinent inquiry such as Dr. Leo Wise, of Cincinnati, addressed to Mr. Secretary Evarts in the Rosenstraus case, contained in this report of the President:

1. What are the general rights of citizens of the United States in Russia?
2. Are American Israelites by reason of their faith debarred from the enjoyment of the privileges guaranteed by treaty to all American citizens? If so, why?
3. In making treaties with the government of a country where native Israelites are subject to disabilities and are not admitted to the full rights of citizenship, is it necessary that in order to secure to American Israelites the enjoyment of the privileges granted by those treaties to citizens of the United States generally, a clause be inserted in the treaties wherein the right of Israelites to be enumerated among those to be benefited by the treaties is specifically set forth?

ROSENSTRAUSS AND OTHER CASES—PATRIOTISM.

This correspondence develops also some interesting facts as to the grudging exceptions made here and there in favor of an American citizen resident in Russia. The case of Rosenstraus I have once before referred to. On urgent remonstrance this citizen was allowed as a special favor to merge his Hebraic qualities into that of a citizen of the United States. Kind condescension! Wonderful benignity! But his remonstrance in 1873 develops the espionage and restriction against Hebrews of American birth. He begged our diplomatic representatives to protect him, so that his "religion might not be made a crime." He appealed to our treaty with Russia in 1832, and in some sort that treaty was vindicated from violation. The determination of our Government, announced by Mr. Fish in 1874, to claim for our Hebrew citizens all the privileges in the Russian dominions allowed to Russian Hebrews, has the approval of patriotism.

Other cases appear in this correspondence, but they show that the privileges of Russian Hebrews which we claimed for our own Hebrews are not so general and beneficial that diplomacy should have disputed about them, except for their abolition.

RECIPROCAL RELATIONS.

Hence, if nothing else results from the publication of the correspondence called for in my resolution, this ringing inquiry of Dr. Wise will forever demand answer from those in charge of public matters. When men ask for the guidance of Israelites who may wish to travel or carry on business abroad the American Republic should be the pillar of cloud by day and of fire by night.

If, when we make such inquiries, we are told that we shall endanger our amicable relations with our ancient friend the Czar, let us reply that we want no friendship with a rule so entirely tyrannous. If Russia will not regard the American Hebrew who goes thither to trade under our reciprocal treaties, what regard should we give in return?

Oh, yes, the English Jew obtains privileges in Russia which the American Jew cannot get, and which the native Russian Jew has

not; but we are estopped by municipal authorities in the interior of Russia, against which the central despotism at St. Petersburg will not interfere. (Executive Document No. 192, page 28.)

Mr. Pinkos, an American Jew, can be expelled from the capital of Russia and our Government, through Mr. Evarts, may protest. The pretext of his expulsion is a plot for assassination, as to which there is no proof and none pretended. He was "an orderly and respectable citizen," (page 34.) His family received "unnecessary hardship." It was "no place for one of his creed."

A general order against foreign Jews was issued, and measures for their expulsion taken at Moscow and other cities. Another case of expulsion in 1880 is reported, (page 39.) It is that of a merchant, Mr. Wileczynski. He bore our passport. "What!" exclaims our minister, Mr. Foster (page 41,) "if this had happened to a Russian subject in New York, for the reason that he attended a particular church!"

Mr. Evarts rightly characterized the subject when he said to Mr. Foster, (page 53:)

This Government does not know, or inquire, the religion of the American citizens it protects. It cannot take cognizance of the methods by which the Russian authorities may arrive at the conclusion or conjecture that any given American citizen professes the Israelitish faith. The discussion of the recent cases has not as yet developed any judicial procedure whereby an American citizen, otherwise unoffending against the laws, is to be convicted of Judaism, if that be an offense under the Russian law; and we are indisposed to regard it as a maintainable point that a religious belief is, or can be, a military offense, to be dealt with under the arbitrary methods incident to the existence of a "state of siege."

The year 1881 was a terrible one for these religionists. Our Secretary of State, Mr. Blaine, denounced the indiscriminate pillage. It was the year of rabble, rapes, robberies, and riots. Its excesses are only too faithfully catalogued in the appendix to this speech. The English Parliament denounced the outrages in May of last year, for had not an English Jew, Mr. Lewisohn, been ordered to quit Russia because he was a Jew?

Why should not the American Congress do at least as much as Mr. Blaine did in his letter of July 19, 1881? In writing to Mr. Foster he said: "Give discreet expression to the feelings of sympathy and gratification with which this Government regard any steps taken in foreign countries in the direction of a liberal tolerance analogous to that which forms the fundamental principles of our national existence."

Whenever our American Hebrews were permitted to remain in Russia it was, as in the case of James G. Moses, a citizen of New York, accorded as a special privilege. (Page 71.) No general right was acknowledged.

NO EXPRESSION IN CONGRESS.

The last letter in the report is that of Mr. Frelinghuysen to our chargé, Mr. Hoffman. It indicates a proper regard for our citizens; and yet, Mr. Speaker, our Foreign Affairs Committee in this House, with a resolution before them for action, failed to make its expression. It reported nothing expressing sympathy or indignation. Why? Perhaps it is because the character of some of the immigration is not up to the standard; or it may be we are deluded with fresh Russian promises like those of 1872 for the betterment of the condition of the Hebrew people in Russia. Or it may be that the new administration in Russia has entered upon remedial measures. This is to be hoped, but I see no signs of it; only a little lull in the unexampled bigotry of 1881.

However, the great facts of 1881 remain for the reprobation of mankind, and although our Congress be dumb, the voice of New York City and of England has been speaking.

Again and again I urged the honorable chairman of Foreign Affairs to report the resolution which I gave him, and which I will hereafter notice. Again, by a resolution last week, I called for the additional correspondence, with a preamble to indicate the thought at the foundation of my action. Here it is:

PERSECUTION OF JEWS.

Mr. COX, of New York, submitted the following resolution; which was referred to the Committee on Foreign Affairs:

"Whereas the Government of the United States should exercise its influence with the Government of Russia to stay the spirit of persecution as directed against the Jews, and protect the citizens of the United States resident in Russia, and seek redress for injuries already inflicted, as well as secure by wise and enlightened administration the Hebrew subjects of Russia and the Hebrew citizens of the United States resident in Russia against the recurrence of wrongs: Therefore,

"Resolved, That the President of the United States, if not incompatible with the public service, report to this House any further correspondence in relation to the Jews in Russia not already communicated to this House."

Still, sir, no response. The conduct of the committee is lame and impotent when we consider the atrocities committed in the name of a great Christian power against the religionists of another faith. Perhaps the honorable committee were too much engrossed with the scandals and mercenaries of South American diplomatists!

History records that for 5,000 years this race has preserved its moral worth and physical identity in a remarkable degree. Its faith has made and kept its unity. Any other race less gifted with zeal, virtue, fortitude, tradition, pride, and lineage would long since have succumbed. Its spirit has not been quelled by Moslem, Christian, or pagan despotism. The intrinsic nobility and buoyancy of its nature has lifted it above the chances and changes of time. It now stands forth as a rare exemplar in art, intellect, and humanity,

assisting to give laws of toleration, moderation, and honor in the interest of civilization.

It is therefore with much earnestness, and speaking for the Hebrews of the United States, and especially for those of the city of New York, that I urged an expression by this Congress upon this topic. Not alone because of the liberality of our Constitution in its first and primal article as to the liberty of the soul in matters of faith and doctrine; not alone because of the grand history of this "peculiar people" among the nations; but because this country, as an asylum for the persecuted and downtrodden, should give its moral emphasis concerning a topic of such universal fraternity and significance.

In my former speech I quoted from impartial history, such as Wahl's Land of the Czar, Brenner's Excursions into Russia, and Julian Allen's Autocracy in Poland and Russia, to show that the Hebrews were treated as a degraded race by the rulers of Russia. They have been driven like beasts with scourgings into army and navy and from province to province. They have been treated with such contumely as to redder the face of mankind with shame at the barbaric outrages. Taxes without cessation, reason, or limit were followed by personal inflictions, rape, robbery, and murder, from which there was no respite. I venture to say that in the whole circle of mankind never were two and a half million of people so maltreated by intense brutality as the Hebrews of Russia, and none so causelessly maltreated. The treatment of the Jews by the Barbary States and by the Moslem of Arabia and Turkey bears no comparison.

If two years ago these sad Hebrews could appeal to their American brethren to cast their eyes toward their misery, with a hope that these inconceivable cruelties might be mitigated; if they could, in fancy, picture our happy and free homes, and beseech us to come to the rescue, surely we ought to give voice to emphasize the humanity of our land, if we cannot otherwise go to their help, or by reason of the laws of nations and comity intervene between the alien government and its oppressed subjects.

I need not go to our precedents in the case of Greece, Hungary, or Ireland to support a resolution of sympathy and succor. The supine nature of our present administration, if not of the Committees on Foreign Affairs in Congress, seems to forbid our even expressing our detestation of these horrors on horrors. It would offend the Father-Czar. It would destroy the *entente cordiale* which has always existed between the two nations.

Perhaps, in considering the details of these wrongs to this great race by this great Slav power, we may change our idea of intervention. Let us see!

In making this review I will not requote history. Let me confine myself to the annals of the recent past.

HORRORS OF 1881.

Up to the 1st of January, 1881, the south and west of Russia was a scene of unparalleled horrors. Since that time these enormities have been intensified—men murdered, infants dashed to death or roasted alive, and married women and maidens violated—compared with which the loss of property is nothing. The pillage, firing, and razing of whole streets or Jewish quarters were but incidents in the inhuman work. The consequence has been homelessness and emigration. While this carnage was going on the Russian authorities were either sympathetic with the mob or apathetic of results. Owing to the revolutionary condition of Russia, the Jews, by some peculiar pronunciation of a word, were made the scapegoat of Nihilism. Even ministers of state issued edicts which looked to the imbitterment of this feeling and an addition to the list of murders of the Jews. The German anti-Semitic feeling gave renewed vigor to these calamities.

The Czar Alexander II was assassinated on the 3d of March, 1881. One consequence was that the Pan Slavist feeling took shape and form. The Jews appealed to the governor at Elisabetgrad. They numbered one-third of its people of 30,000. The governor took no notice of the appeal. On the 27th of April the mob began. The riot was systematic. The attempt of the Jews to protect their dwellings and synagogues inflamed the drunken crew. Thirty Jewesses were outraged. Insanity followed outrage and murder. For two days the pillage went on. Five hundred houses and one hundred shops were destroyed. Two million rubles (a ruble was then worth about forty cents) was the loss in property.

Placards were issued declaring the Czar had turned over the Jewish properties to his pious children. Sundays and saints' days were chosen for the general uprising against the Jews. On the 7th of May, at Smiello, thirteen men were killed and twenty wounded and sixteen hundred left homeless. In the old capital of Russia, at Kiew, a riot, was preordained by the mob, with the same consequences. Kiew is a city of 140,000. It has 20,000 Jews. The Cossacks stood by while infants were thrown from windows. Arson was common. In fact it is a Russian crime. Here 2,000 Jews were left without shelter.

The next day these scenes were renewed at Browry and at Bere-zowka. Taking advantage of the absence of the men at the synagogue, the women were ravished. Again, near Kiew, on the 10th of May, at Konolop, and Wasilkow, the drunken, throat-cutting miscreants invaded every precinct of domestic sanctity. Whole provinces caught the infection of violence. The inertness of the governor left the

populace free to believe that they were carrying out the will of the Czar.

At Alexandrowsk three hundred out of four hundred families were ruined, and property destroyed amounting to over one hundred millions of dollars. Everywhere these riots were proclaimed in advance.

They were not confined to the cities and towns. The farms in the province of Ekaterinoslav were destroyed. The rioters were dressed up as police!

The geography of Russia has such an extent and so peculiar a terminology that to name is almost to reiterate. Along the Dnieper, in the same month, and down to the seaport of Odessa, where one would suppose precautions might have been taken, a six hours' riot resulted in death and violation. The loss was three million rubles. At other places, and in one month, these horrors spread over Southern Russia. They spread to Astrakhan, and even into Siberia.

Outside of Poland there are nearly 2,000,000 Jews in Russia, and Poland had thus far escaped. The Catholics and Jews lived together in harmony; whereupon General Ignatieff directed the governor to raise a commission to "consider how the Jews should be treated!" Then arose the feeling which led to the Warsaw riots.

During the rest of the year of 1881 these outrages continued. Sometimes they were led by merchants out of commercial jealousy. Women joined, like fiends of the Commune, in the attacks. Horrors too terrible to describe were all too common. These Slavonic viragoes became parties to the atrocities upon their own sex.

August came, and it was only when the harvesting became urgent that these atrocities ceased.

The day of atonement in the Hebrew calendar was selected by the orthodox Greeks for the destruction of synagogues.

In all these pillaging raids the ukase of the Czar, whether genuine or not, was the trumpet which roused fanaticism and rapacity. Even the accomplished actress, Sarah Bernhardt, was mobbed at Kief and at Odessa in November on suspicion of being a Jewess!

WARSAW!

But Warsaw furnishes the climax to these horrors. Holy time is selected. It is Christmas-tide. Three hundred houses and six hundred shops are devastated. Beggary and destitution follow. Twenty thousand soldiers are here in garrison. Their officers follow the example. The riot begins in a panic in a Christian church. The church is filled with thousands.

The panic, of course, is attributed to the Jews. The cry goes up, "Sacrifice them!" Thirty Jews are dispatched at the door of the church. Houses and shops of watchmakers, booksellers, and other tradesmen are despoiled. The synagogue is attacked. The fury of the mob rages through three days.

Catholics who rush to assist are massacred. The Roman Catholic priests condemn the persecution and endeavor to stay the violence. Nuns are active in relieving the wounded and distressed. Business and pleasure are suspended during the insane saturnalia.

Yet these Jews of Warsaw, thus maltreated and sacrificed, are the most industrious and honest of the population. Their sacrifice was devilish beyond words to express.

In these various scenes of spoliation and death the police were no better than the rioters. All they did was to interfere to prevent the Jews from defending their homes, lives, families, and property.

RECAPITULATION.

Up to the 1st of January, 1882, there were one hundred and sixty towns and villages in which rapine, murder, violation, and spoliation ran riot. There were two hundred and twenty-five cases of outrages upon Jewesses. These statements are corroborated by the correspondents of the London Times. They but feebly picture the consternation and terror of the nine months of 1881. The incendiarism and its baleful results which characterized these malignant and fiendish movements have had but feeble chroniclers. It is estimated that 20,000 Jews were homeless in Southern Russia, \$80,000,000 of property destroyed, and 100,000 people reduced to poverty. Many found safety in flight, leaving their all. Refugees fled to the shelterless fields; some escaped across the frontier; 5,000 alone managed to reach Brody, on the Austrian side. Hundreds fled in dismay to the Danube, to Turkey, and some sought the hills round about Jerusalem.

PRETEXTS FOR THE OUTRAGES.

Why was not the indignation of Europe exerted to suppress these outrages? I answer, first, because the sentiment against the Jews was fostered in the neighboring German nations as well as in Turkey to some extent; second, because the news was suppressed. No telegraphs or papers with true accounts were permitted to be sent over the Russian border. Over a vast area of country, from the Black Sea to the Baltic, these scandals upon our century, these outrages whose type is medieval, have gone to history with scarcely a protest.

In Russia the attempts to investigate them only added fresh fuel to the flame. The experts found no language or code to express their reprobation. They limited their language and methods of redress to the invention of new phrases of excommunication and new penalties for the oppressed Hebrew.

When Count Ignatieff received Dr. Orshansky, a leader of the Hebrews, in St. Petersburg, he assured the doctor that the western border of Russia was open for emigration. One condition was fixed,

namely, that the young men who were fitted for the conscription should not go. Besides, it was graciously permitted that on certain impoverished land in Russia, "needing colonization"—aloof from the rest of the population—the Jews might go. This was the repetition of the experiment of the Emperor Nicholas, which, it is unnecessary to say, was a failure and a disaster.

WHO RESPONSIBLE.

Is it said that the Russian peasantry, and not the government, are responsible, I answer: if the peasantry of Russia are too ignorant or debased to understand the nature of this cruel persecution, they have warrant for their conduct in the customs and laws of Russia to which I have referred. These discriminate against Jews. They have reference to their isolation, their separation from Russian protection, their expulsion from certain parts of the empire, and their religion. When a peasant observes such forceful movements and authoritative discrimination in a government against a race, it arouses his ignorance and inflames his fanatical zealotry. Adding this to the jealousy of the Jews as middlemen and business men, and you may account for, but not justify, these horrors. The Hebraic-Russian question has been summed up in a few words: "Extermination of two and one-half millions of mankind because they are—'Jews!'"

COMPLAINTS VS. THE JEWS.

Complaints against the Jews were made that the Jew was a monopolist; that in obedience to the Talmud they held to the Khazary. This Khazary was the division of the country into small districts inhabited by Christians, one of which was apportioned to one of the members of the Jewish community. But it would be strange indeed if this custom, even if it existed, should be an excuse for the excesses of lust and rapine. The evil complained of is easily alleviated. The charge of usury has been disposed of by the statements of Dr. Adler. The main complaint against the Jews being middlemen is the same made in every community. It is the process by which consumer and producer are brought in contact. Laws could or should remedy this, if it be an evil.

At last the main complaint comes to this: That the ordained victims are Jews. They are of another faith. True, the law of Russia is apparently tolerant. It reads not unlike the Constitution of the United States in its first four lines. This is article 45, volume 1:

Religious liberty is granted not only to the Christians of various foreign denominations, but also to Hebrews, Mohammedans, and heathen. Let all the nationalities living in Russia glorify God Almighty in their various tongues according to the law and faith of their ancestors, in order to bless the reign of the Russian monarchs, and to pray the Creator of the world to increase the prosperity and strengthen the power of the empire.

Yet when remedies are sought for the grievances, when educated Jews proposed to General Ignatieff schemes to bring about a rapprochement between the Jews and the rest of the population, what was the answer? It will be found in the recommendations adopted by the majority of the local commissions appointed to consider the Jewish question.

These recommendations are as follows: 1. The decrees which authorize Jews to erect synagogues and other houses of prayer must be annulled. All their synagogues and public places for prayer are to be closed, and Jews are only to be allowed to perform their religious services in private houses; these, however, may not be specially constructed for religious purposes. 2. Jews shall not be permitted to elect the managers of their prayer meetings nor to appoint any rabbis. 3. The ordinance by which Jews were allowed to give their children an exclusively Jewish education shall be revoked. Some of the commissions are in favor of permission being granted to Jews to send their children to the Christian schools. 4. The registers of births, marriages, and deaths among Jews shall in future be kept by the Christian authorities, as Jews cannot be trusted to keep correct and faithful records. 5. In order to prevent the Jews in future from "exploiting" the rural populations, they will be strictly forbidden to reside in villages or in market districts. 6. Neither in towns nor in villages shall Jews have the right to own houses or landed property. 7. Jews shall not lease mills, estates, or factories, nor may they be employed there. Any proprietor of mills, estates, or factories who shall intrust their management to Jews will render himself liable to a fine of from 500 to 1,000 rubles. 8. Jews will not be allowed to sell spirituous drinks, nor to be in any way engaged in the manufacture of such drinks. 9. No Jew may be employed by the state. 10. Jews may not be contractors or purveyors, and several trades and commercial transactions are to be forbidden them. 11. Local banks are to be formed for the purpose of granting loans to peasants, in order to enable them to purchase land. The banks will be forbidden to make such loans to Jews. Commissions not hostile to the Jews, for the most part, recommended only that Jews be permitted to reside in any part of the country and to purchase a limited area of land. The recommendations of the assemblies of Finland, Cherson, and Volhynia, that Jews shall be excluded from all state employments and forbidden to trade in the bazaars and markets, are likely to be adopted by the minister of the interior, and to receive the sanction of law.

This is the cruel response indicating the sentiment which inspires the mob. It leads to persecution and drives into exile. The truth is now as in the Middle Ages—the caprices of power have set the Jews apart in Russia as the pariahs of the realm. The history of the laws made concerning them is the history of bigotry. One sovereign would not admit them into the empire on the ground that the Russians would cheat them; another encouraged them; a third again excluded them. In one part of Russia they have been forbidden to enter a town in Jewish costume; in another they have been cautioned, under the penalty of fine and imprisonment, against wearing any other. By recent legislation they have been declared incapable of holding land. The Emperor Nicholas, on the other hand, offered them peculiar advantages on condition of their becoming agriculturists. It had struck him that the Jews, producing nothing

themselves, lived on the earnings of their fellow-subjects, and he proposed to remedy this by turning his Hebrew subjects into cultivators of the soil.

For some cause the Emperor Nicholas's Jewish land scheme turned out a failure. The notion entertained by some ethnologists that the Jews as a race have an aversion to agriculture is not tenable. Probably, they have acquiesced, as the result of long-continued persecution, a reasonable dislike to invest their money in any but the most portable forms of wealth.

The truth is that the gross supineness of the military and police, under the apathy of the supreme authority, permitted these frenzies of savagery to go on in the name of the "good Czar—the father of the Orthodox."

OUTBREAKS NOT LOCAL.

These outbreaks are not local. Whether at Minsk, where eight thousand Jews lost their all, or at Koretz, where thirty Jews were burned; whether the Hebrew was a money-lender or a blacksmith, a mason or a locksmith, a tailor or a shoemaker, a joiner or a plumber, a banker or a farmer, a trader or a tramp, a rabbi or a tinker, an actress or an editor, they were alike the aversion of the Pharisical Slav, whose own religion, if he would only recall it, was derived from Judea!

JEW AND TARTAR.

Where except from this despised race came the religion of Russia? Its minsters of gold and altars of gems, its architecture of a thousand five hundred years, its legends of saint and picture of Saviour, all have their antitype in the Semetic civilization that has given them all the glory of church and pomp of state which they possess.

Who girt the thews of your young prime?
Why, who but Moses shaped your course
And bound your fierce, divided force
United down the grooves of time?
Your mighty millions, all, to-day
The hated, homeless Jews obey.
Who taught all histories to you?
The Jew, the hated, homeless Jew.

Who taught you tender Bible tales
Of honey lands, of milk and wine?
Of happy, peaceful Palestine?
Of Jordan's holy harvest vales?
Who gave the patient Christ? I say,
Who gave you Christian creed? Yea, yea,
Who gave you very God to you?
The Jew! The Jew! The hated Jew!

But these horrible revelations are too stern for the thoughtful phantasy of even the muse of Joaquin Miller.

Dr. Adler has collected, with wonderful skill and emphasis, the details of these blots on our nineteenth-century civilization. His catalogue I append as a commentary upon the improgressiveness and barbarism of our vaunted era!

MYSTERY OF INIQUITY.

It was impossible to gather the detestable details, because of their peculiar brutality. Where names were known, they were omitted in the dispatches. The chief rabbi of England, in order to protect those who were victims from cruel shame and the witnesses from violence, uses the significant — dash. What a painful commentary is this letter:

Letter from —, Kiev, dated 14th February, 1882, to Dr. —, and by him transmitted to Rev. Dr. Adler.

I send you herewith a list of the women who have been violated and of the persons slain by our enemies in this town. There may perhaps be found in this list names that have been mentioned before.

Violated women:—(1) Miril, wife of Reuben Elhart, violated by the cooper Vasil Durin. The case was brought to the knowledge of the judges without any result. (2) The niece of Jacob Feldman, died a month later; case brought before court, where, in consequence of the death of the complainant, it rests forever. (3) M— R—, daughter of J— E—. Her father departed with her and his whole family for America, because he could not bear the disgrace. David Kushnerski was an eye-witness of the crime. (4) F— P—. After the violation she was carried away to be thrown into the fire. The Christian Bicosorow saved her. She refuses to admit that she was really violated, but Elias Altman saw the act. (5) S—, the widow of the butcher, N— S—. Stephan Mikolaitzef and his companions beat her cruelly, stripped her, and threw her down. The first-named rufian violated her, after which Christian Artiem Hubtschak saved her out of the hands of the other miscreants. (6) The unmarried daughter of Mr. —. Her father, a rich man, denies it, but it was seen by Elias Altman. (7) C—, wife of A— E—, and (8) his daughter H—. This man begs and entreats that his name should not be made public. This I leave to your discretion. (9) S—, daughter of J— B—, a girl of fourteen. She denies it, but it is only too certain. (10) S—, wife of T— W—. Both of them admit and lament the fact. (11) E—, daughter of the same, likewise admitted. (12) L—, daughter of the tailor S— G—. (13) R—, wife of T— S—. She denies it, but there are witnesses. (14) S—, daughter of I— Z—. She is engaged to be married; denies it, but witnesses are willing to come forward if required.

All these outrages have taken place in that part of the town which is called Demievka; in the other parts of the town I can gather no information as to names of the persons violated, for the girls and women deny their shame. They are all modest women, and do not understand the good they are able to do by admitting the outrage. They only think of the love of their husbands and their estimation in the eyes of their friends.

Of course nobody could think beforehand that such outrages would be perpetrated, nor that such a cry of sympathy would arise, otherwise we should have more carefully collected names and dates. As it is, we are of course ignorant of the names of most of the perpetrators of these crimes. Nor are we able, after nine months have passed, to compel our sisters to come forward to trumpet out their shame and to tear open again the wounds which are just beginning to close.

A report from the Russo-Jewish committee not only confirms the statements of the London Times and Dr. Adler, but proves that the half had not been told. The very names of those murdered and violated are given. Eminent rabbis have added their confirmation in letters to Dr. Adler. The baiting and hounding of the Jews, the details of the sickening horrors at the fires and riots, have transpired in spite of the attempts of the Russian authorities to hide their shame from an inquiring world. So hideous and terrible are those details that Dr. Adler writes that "he dips his hand in his heart's blood to make the record to arouse the hearts of upright men to mercy and to enlighten them to judge rightly." Pillage and plunder, murder and rape, upon the most helpless of mortals, and the officials raging against the violated and the victim!

NO REDRESS.

"Three thousand were arrested for one act of the mob." This is the boast of the Slav under the burning scorn of mankind. Ah! but the 3,000 were at once set free and the victims declared the guilty! The Warsaw miscreants were applauded. The prevalent insurrectionary spirit was appeased by the blood of the innocent and the bodies of the violated. "Ravens lions strangling the scattered sheep of Israel," and no relief! Children brought forth in the midst of the insurrections, still-born. Thus saith the physician who writes of it. It curdles the blood to read these sanguinary and odious particulars of the great wrong of our time; the foulest and most abominable repetition of barbaric history. Like a lamentation of Jeremiah is the voice coming from Berezwka, and attested by a rabbi of the district:

The Lord hath delivered us into the hands of our enemies, who have not only robbed us of all we possessed and destroyed our houses, but have—oh, horrible to relate—shamefully violated the persons of the wives and daughters of some of us. We are in bitter tribulation and danger, and are left without protection by the government. We are in distress and poverty; our children cry for bread and we have naught to give them.

The horrors of Kiev will remain forever as a bloody stigma upon that city of beauty. No charges of malevolent misstatement can break the force of these atrocities, abetted and sanctioned by the worst existing government on earth—tyranny tempered with assassination, and autocracy with arson!

As I have said, this was no local outbreak. It was as general as the devilry which begat it. It had its malign source at St. Petersburg. It is but a chapter in the long history of persecution which the hapless Israelite has undergone since his weary pilgrimage began.

From the grand old capital at Kiev; from the historic streets of Warsaw; from the busy marts of Odessa, to the smallest farm where the humblest descendant of Abraham plowed his field and gathered his harvest; from the splendid synagogues of the great cities where wealthy Jewesses dressed in silks and satins, after their olden fashions, to the squalid huts of the poorest Hebrew peasant, the vengeance of the debased Slav has been wreaked upon the people of that race whence we derive the grandest of our religions; and simply because the victim was a Jew.

It mattered not how pacific and gentle the man or how kind and beautiful the woman—had it been David or Miriam, Isaiah or Rachel; it mattered not how pure, gentle, beautiful, or industrious the object of obloquy, the malediction and malefaction of the mob was intensified by the sight of thrifty labor and active virtue, which it could not comprehend and did not practice.

HISTORIC NEMESIS.

Not less sad than grand in the pageantry of history is the spectacle of the eternal wanderings of this "remnant" of this oldest and most heroic people. Selected by the Most High to be the depository of His sacred law, they have clung to it and defended it with their lives for thousands of years, from Moses to the Maccabees, and from the Maccabees to our time, always protecting it, always preserving it, to bless mankind with its glorious precepts and defiant probity.

The old Babylonian, the Egyptian, the Medo-Persian, the Assyrian, and the Roman Empire persecuted this race relentlessly. Their atrocities were inflicted because it would not adopt their pagan rites and Pantheistic gods. Its people were slain by the million, sold into bondage, but never exterminated.

Those nations are almost myths. Egypt, the venerable enslaver of Israel—where is she? The palace of the successor of Pharaoh echoes with the ribaldry of the English sailor, and odalisques furtively peep from casements to know when the next shell from the inflexible of the Saxon shall startle their palatial seclusion. Scarcely a vestige of Egyptian greatness and power is left.

I have wandered amid the monuments and effigies of ancient nations only to reflect that the Bible of the Jew gives permanent law to the world of mind and matter. Russian Neros, Slavonic Caligulas have and may come. They have gone and will go. The head of Greek Christianity ought to profit by their example, and we should help him to that result. The All-Seeing has selected this American nation to restore life and liberty by precept and example to this much-wronged and afflicted people. We will be recreant to our highest function if we allow any opportunity to pass without an earnest attempt to stigmatize and avert such calamities as those of 1881-'82, which have afflicted this chosen people.

OUR SYMPATHY.

Sir, this country cannot be indifferent to the treatment of this remarkable race. If we can have sympathies with the Teutonic and Celtic people, reaching to the other side of the ocean, there is no reason why along with our Jewish fellow-citizens we should not be touched by the tales of sorrow and suffering which come to them and to us from Russia. They concern millions of their race. They are the themes of talk in synagogues, homes, asylums, lodges, schools, and colleges. What then is the duty of American representatives in such a crisis?

INTERVENTION.

If it be answered that we have no right to intervene in this Russo-Jewish imbroglio, I have abundant answer:

First. From national justice, which recognizes humanity as the capital and illuminated missal in its codes. The old rule that nothing is alien which is human never had such emphatic application. We are recreant to every advanced idea of our age if we do not utter our protest against the vindictive evangel of the Slav against the Jew.

Second. Our interest is increased from the fact that thousands of these refugees are coming hither to cast their fortunes with our Republic. There are or were the last of June 20,000 starving refugees at Brody, Austria; 10,000 in similar condition at Lenberg, and thousands of others scattered over Europe. These are cared for as well as may be by their coreligionists in Europe. Some 9,000 have been sent to this country. Some of them are so infirm and helpless that they must be returned if not cared for here. This rush of immigration has called forth the best charity and energy of the American Hebrew.

It is the testimony of Mr. Madison that in the days of our Revolutionary trial and in the civism which followed it the Hebrew element had no peer for patriotism and devotion to this land and its institutions. The children of Israel have observed all the relations of loyal and domestic life. Their duty has been done, not only to the state and to their fellow-citizens, but with abundant charity to those of their own creed. Therefore their petition and remonstrance come with double emphasis to our National Legislature when it moderately requests, in the words of my resolution, that "our Government should exercise such influence with the Government of Russia as the ancient and unbroken friendship between the two nations may justify to stay the spirit of persecution and redress the injuries it has already inflicted, as well as to secure, by wise and equal administration, the Hebrew subjects of Russia against their recurrence."

This sentiment has been voiced in public meetings like that of the metropolis which I in part represent, where our foremost citizens, following the example of Cardinal Manning, the archbishop of Canterbury, and other dignitaries of England, entered their demand that we should appeal for mercy and justice to be meted out to the Hebrews of Russia.

Third. But if it be said that our remonstrances will beget entangling alliances abroad and disturb our friendly relations with the autocrat of Russia, I answer by a collation of authorities made by a friend, Judge Myer S. Isaacs, of New York, which, so far as precedents go, abundantly establish our right, if not internationally and legally, yet morally, to protest in the name of God and humanity against these outrages:

With these facts ascertained and not disputed (for the Russian Government at most claims that, owing to local disorders, the power of the imperial authorities is crippled in dealing with these riots) what is the duty of foreign governments—what is the duty of this Republic?

A state of affairs exists at this moment in Russia strikingly analogous to the condition of things in Bulgaria which constituted the sole pretext for the Russo-Turkish war of 1877.

It was then claimed that the Sultan failed to protect his Christian subjects in the European provinces of Turkey from the cruelty of Mohammedan neighbors, from atrocities in which even Turkish soldiers participated. An American consul and a correspondent of a New York newspaper furnished reports of the facts which justified imperial action, and elicited imperial gratitude for the messengers of these tidings.

The circular note of the imperial government says:

"The question was one of humanity and general interest—bringing the Turkish Government to rule the Christian subjects of the Sultan in a just and humane manner."

The Czar, in his note of April 24, 1877, says:

"He had sought, in concert with the great European powers, to ameliorate the condition of the Christians in the East. The Porte finally refusing, he was obliged to proceed to more decisive acts. His desire, shared with the whole Russian people, to improve and assure the lot of the oppressed populations of Turkey, called them to fresh sacrifices for the Christians of the Balkan Peninsula."—*Annual Register*, 1877, page 179.

The law of nations affords many additional precedents for "the intervention of one nation in the affairs of another in order to protect persons subjects of that state from persecution on account of professing a religion not recognized by that state." (Phillimore, *Int. Law I.*, page 434.)

1. Intervention has been claimed by a Christian state in the affairs of another in behalf of a particular body of Christians.

(a.) The treaty of Westphalia (1648) established an equality of rights between Roman Catholics and Protestants.

(b.) This was confirmed in the treaties respecting the German confederation of 1815.

(c.) Elizabeth, Cromwell, and Charles II intervened in behalf of Protestants in Catholic France. Anne, in the negotiations preceding the treaty of Utrecht, (1714,) stipulated with France for the release of French Protestants who had been imprisoned for religion's sake.

(d.) In 1690 Great Britain and Holland demanded and obtained from Savoy permission that certain Sardinian subjects should freely exercise their religion.

(e.) Sweden intervened (1707) in behalf of the Protestants of Poland.

(f.) Many treaties embrace references to the results of such interposition—Velau,

(1657,) Nimeguen, (1679,) Ryswick, (1698,) Breslau, (1742,) among others—where Roman Catholic sovereigns effectually intervened on behalf of Catholic subjects in countries ceded to Protestant rulers.

(g.) In 1849, the English and French forces near Naples, under direction of their home governments, intervened in the affairs of the Kingdom of Sicily on the ground of humanity, because barbarities committed at Messina revolted the feelings of these spectators. And subsequently, when peace was attained, the two governments undertook to say to the King of Sicily that "they feel convinced that, following the impulse of his humane disposition, he will consider it indispensable to grant a general and complete amnesty to all persons who may have taken part in the political movements of Sicily." (Annual Register, 1849, page 310.)

(h.) In 1823 the interference of European powers on behalf of Greece was on the ground of humanity, and a distinguished writer says: "The Christian powers were eminently justified in their interference to rescue a whole nation, not merely from religious persecution, but from the cruel alternative of being transferred from their native land into Egyptian bondage, or exterminated by their merciless oppressors."

(i.) The intervention of the French in the Papal dominions was founded on the request and permission of the Pope to protect coreligionists, subjects of another state, (Italy,) contrary to the wish of that state. And Napoleon, in his address of justification, said: "The duty of protecting her coreligionists was France's justification for active intervention." (Annual Register, 1790.)

2. Intervention has been claimed by a Christian state in the affairs of a Mohammedan or an infidel state in behalf of Christian inhabitants of the latter.

(a.) The intervention of Russia in behalf of the Greek Christians in the Turkish dominions was the avowed justification for undertaking the Crimean war.

(b.) The intervention of Russia in behalf of the Christian subjects of the Sultan was the single pretext for the Russo-Turkish war of 1877.

(c.) The wars of the Crusades were largely for the rescue of Christians from the Mohammedan power.

(d.) The intervention of England in China, in 1870, was in behalf of Christians (priests, merchants, and others, French or Russians) maltreated in the Chinese Empire. (Ann. Reg., 1870, p. 300.)

(e.) As long ago as 1604 a treaty between Henry VI of France and the Sultan Achmet recognized this right of intervention.

(f.) Christian worship and certain orders were protected in Turkey under the terms of the treaty of 1740.

3. Intervention has been exercised in behalf of the Jews of another state denied liberty or equal rights, or persecuted, and their wrongs not redressed by their government.

(a.) In 1840 Great Britain, France, and the United States interfered in behalf of the Hebrews persecuted at Damascus, because of the alleged sacrifice of a Christian child.

(b.) The consuls of all foreign governments, including the United States, intervened to protect the Jews of Roumania when persecuted, (1872,) and the language of the Secretary of State, Hamilton Fish, in his dispatch of approval communicated to the United States consul at Bucharest, is significant: "Whatever caution and reserve may usually direct the policy of this Government in such matters may be regarded as inexpedient when every guarantee and consideration of justice appear to have been set at defiance in the course pursued with reference to the unfortunate people." (Executive Document No. 75, Forty-second Congress, second session.)

The positive course taken by the then United States consul at Bucharest, for several years subsequently, led to the comparative immunity of the Roumanian Jews from ill-treatment.

(c.) The solemn declarations of the treaty of Berlin (1878) have given the sanction of international law to the contention that the Jews are entitled to be regarded as men, and as such will be protected by law, notwithstanding bigotry, fanaticism, and ignorance continue to inspire misconception and persecution.

The independence of Roumania, Serbia, and Bulgaria was recognized, subject to this condition in the treaty:

(Art. 44.) "The difference of religious creeds and confessions shall not be alleged against any person as a ground for exclusion or incapacity in matters relating to the enjoyment of civil and political rights; admission to public employment, franchises, and honors, or exercise of the various professions or industries, freedom, and the outward exercise of all forms of worship are assured to all persons belonging to Roumania as well as to foreigners."

The significance of these provisions will not be weakened by the suggestion that the envoys of Russia signed the treaty, and that this event occurred less than four years ago.

(d.) Intervention in behalf of the Jews of Morocco was the subject of the international conference at Madrid, (1880,) whereat the minister of the United States, General Fairchild, attended as representative of our Government.

(e.) In December, 1744, an edict was published by Maria Theresa, then Queen of Hungary and Bohemia, afterward Empress of Austria, ordering all Jews to evacuate Bohemia and Moravia before the end of February, 1745. This edict was revoked by reason of the earnest remonstrance of George II of England, the ambassadors of the Netherlands, Sweden, Denmark, and Poland uniting in representations at Vienna. On the 25th of May, 1745, the following decree was published:

"Her Majesty the Queen of Hungary, &c., impelled by her natural clemency and by the pressing advocacy of the King of Great Britain and of the States General of the United Netherlands, grants permission to the Jews to dwell in the kingdom of Bohemia and the margravate of Moravia, there to follow their business pursuits."

The instructions to the British ambassador are found among the English State Papers. (Germany, volumes 358 to 364.)

The form of intervention has varied; it has taken the shape of a stipulation or condition in a treaty or remonstrance followed by war. Armed intervention has been adopted to prevent the effusion of blood and protracted civil war.

The intervention in the case of Morocco is a notable instance to which I urged attention in my former remarks on this subject. It has brought forth rich fruitage. Never was a case so full of significant phases. Spain, that once persecuted the Jew relentlessly, not only welcomed the Russian Hebrew to her borders last year as penance for her cruel past, but joined with our nation in remonstrance against the outrages by the Moor against the Jew. Much yet remains to be accomplished in Morocco. There the Jew is not allowed to walk out except barefoot, nor to ride on any kind of animal. There Jewish men and women yet suffer every indignity from their lewd and dissolute Moslem enemy. Thanks to Italian intervention, the governor of Fez was compelled this summer to go to Tangier, two hundred miles, to make an apology to the Italian minister for tearing the shoes off and beating an Italian-Jewish courier. Italy commanded the haughty Sultan to dismiss his officer and pay indemnity to the injured and despised Hebrew.

A correspondent of the New York Telegram, writing from Morocco under date of June 20, 1882, rehearses this story, and adds that the day of barbarous cruelty is passing away in Morocco; not because there is any more liberal feeling toward the Jews, but because the

fanatical Moor sees the interest that the Christian powers are taking in the condition of the Jews. He commends the American representative at Tangier for his part in the vindication of the true principles of manhood. Who shall say that intervention hath not its vigorous virtue, whether applied to the powerful arrogance of a Czar or the loathed spite of a Barbary sultan?

AID SUGGESTED.

It has been suggested by an eminent Hebrew that Congress should appropriate public lands for the colonization of Russian Jews who seek our shores as their refuge from persecution and intolerance. The fugitive Hebrew has been supported by his coreligionists in New York and elsewhere until the benevolence of the race has been sorely tested, and it has been complained that the "followers of the Nazarine" have done so little to aid those who needed it pecuniarily. However this may be, it is no ordinary exodus—this from Russia. It is but just to say here that it is the special virtue of the Hebrew that he has contributed to the wants of his own sick and afflicted as well as of those not of his faith.

Scripture states that immediately after the giving of the law on Sinai Moses promulgated this, namely: "The poor shall never cease from out the land; and they shall be an inheritance to thy children forever. And the people answered, 'We will observe to do, we and our children.'" It is the carrying out of this law which obliges them to take care of their own, as well as the sick of those not their own. On this account no public appeal has been made for those unfortunates who have been driven hitherward by the fury of the mob and at the point of the sword. But the exigency of the calamity which has been thrust upon them may render it absolutely necessary to apply for or to receive extraneous assistance.

If, therefore, Congress cannot at this late day in the session give material or landed aid, at least we can give the loving assistance of our sympathy, and make the voice of fifty millions of people heard from St. Petersburg to Odessa in behalf of the downtrodden and persecuted for their faith and nation.

Let it be known from the Polar Sea to the Ural Mountains, from the Vistula to the straits of Yenikale, that there is a people in this western world who have a soul above the barbarities of intolerance and the vengeance of ill-used power. Let it penetrate the inmost circle of the palaces and pleasures of Peterhoff, where the hunted

Czar hides from his loving children, that the Democracy of America demands a new and better evangel than that of blood and bigotry!

By the sacred memories of our own religion and the liberality of our established order, by the associations which cluster like stars around the sacred mountains of Moriah, Hermon, Hor, Pisgah, Horeb, Carmel, Lebanon, Tabor, and Zion—ay, even of Calvary and Olivet—let us remember the children of that Israel whose faith was given for the "healing of the nations," and whose mystic voice spoke from the mount of God in the blue Aegean, where the banished seer beheld the heavenly Jerusalem with its walls of jasper and gates of pearl standing open day and night, and crowned by its temple of beauty and light!

And shall this vision never have realization?

CONCLUSION.

This people is one of the survivors, with Egypt, China, and India, of the infancy of mankind. It is at the mercy of the cruel Despot of the North. With a lineage unrivaled for purity, a religious sentiment and ethics drawn out of the glory and greatness of Mount Sinai—a ceremony as magnificent as the temple of the wise king who enshrined Jehovah within its adytum and prayed as never human spirit prayed for the stranger in the land—with an eternal influence from its lawgivers, prophets, and psalmists never vouchsafed to any language, race, or creed, it outlives the philosophies and myths of Greece and the grandeur and power of Rome. It is this race, broken-hearted and scattered, to which the Czar of all the Russias adds the enormities of his rule upon the victims of the ignorance and slander of the ages. The birthright of this race is thus despoiled; and, sir, have we no word of protest? Struggling against adversities which no other people ever encountered, do they not yet survive—the wine from the crushed grape?

Champions of Jehovah! how have I gazed at ye within your own gates at the very base of your grand house of the Lord and gate of Heaven and heard your wailing because of the destruction of the fair temple of your love! With what pleading for the restoration of your own Jerusalem have not its Cyclopean stones echoed! How long, O Lord, how long shall rapacity and bigotry despoil this people! Let the dawn come to the children of the wandering foot and weary heart, waiting, waiting for that morning which will give them its auroral glory and its cheerful beatitudes.

APPENDIX.

Persecution of the Jews in Russia, 1881.—Tabulated statement of persecutions, with a list of localities alphabetically arranged and approximate dates.

Town.	Government.	Date.	Nature of persecution.
Alexandrowsk	Ekaterinoslav	May 13	Riot by operatives; announced previously; 400,000 rubles lost; appeal to governor in vain; telegram for help stopped 4 hours; 300 out of 400 families left desolate; women rendered lunatic.
Ananiew	Cherson	May 9	Riot; all houses of Jews destroyed.
Apouchtipi	Ekaterinoslav	May 15-20	Riot; agricultural colony pillaged.
Astrakhan	Astrakhan	August 30	Arrest of instigators alleging spoliation ukase.
Augustowo	Suwalki	June	Fire in Jewish quarter.
Balanowska	Podolia	June	Riot; pillage.
Balka	Taurida	May 17	Wife of innkeeper Allowicz outraged, then roasted; house set fire to in presence of daughter.
Balta	Podolia	July	Threats to fire the village sent to Jews.
Balwierzyski	Suwalki	October 3, (Yom Kippur)	Riot; 1 Jew killed, 20 severely wounded; synagogue destroyed.
Bereznom	Czernigow	About May 28	Riot.
Berezowka	Cherson	May 21	Riot; over 100 Jewesses violated, several forced into river; 9 died from exposure, 3 from violation; 2 men killed; boy stoned to death on Sunday, May 22.
Berislav	Cherson	May	One Jew killed and house burned down; another roasted alive in own house; outrages.
Berizian	Kiew	July 21	Riot; houses destroyed.
Bierdiansk	Taurida	July 1	Municipal council petitioned for expulsion of the Jews.
Blagouchentsk	Ekaterinoslav	About May 15-20	Riot; pillage of agricultural colony.
Bougafka	Kiew	May-June	Riot; after riot peasants offered 800 rubles compensation.
Bobryki	Poltawa	May 19	Riot; pillage; houses destroyed.
Borispol	Kiew	July 21-24	Riot; Jewish quarter burned down; women helped to pillage and brought out their children to witness the scene; women held down Jewesses to be violated; 30 houses destroyed.
Borzny	Czernigow	August 18-19	Riot; pillage; houses destroyed.
Browry	Czernigow	May 9	Property destroyed, but no personal injury.
Charkow	Charkow	August	Jews expelled.
Chvodom	June	June	Jewish quarter fired.
Constantino	Wolhynia	November	Jews expelled.
Czarekonstantinofka	Ekaterinoslav	May 15-20	Riot; pillage of agricultural colony.
Czarwona	Wolhynia, near Zitimir	November 15	100 rioters attacked Jews, alleging ukase.
Czurbaka	Taurida	May 20-28	Riot; pillage; houses destroyed.
Czergassy	Melitopol, C. Wasiljew	May-July	Riot.
Czernigow	Czernigow	About June 1	Mob raised by soldier Korotych, but riot prevented by mayor.
Czumaki	Ekaterinoslav	May-July	Riot.
Czykaki	Poltawa	About June 1	Riot.
Dubno	Wolhynia	November	Jews expelled.
Dzemiawtse	Czernigow, near Njezin	About August 27	Riot; 8 arrested.
Dziewica	Czernigow, near Njezin	About August 30	Riot; an elder and a journalist molested for interfering in favor of Jews.
Ekaterinoslav	Ekaterinoslav	May 18-20	Riot prevented by announcement that Jews are Russian subjects.
Elizabethgrad	Cherson	April 27	Riots; previously announced and planned; origin in "blood accusation;" merchandise thrown into street; Cossacks present; one Jew, Zolotwenski, killed; two young girls throw themselves from second story; 500 houses and 100 shops destroyed; military would not interfere; 30 cases of violation. Protecting his daughter, an old man, Pelikoff, thrown from roof and rendered insane; 3 persons killed in the neighboring districts. Soldiers shared in plunder.
Frederikowka	Wolhynia, near Woloczysk	May 15	Riot; pillage.
Gadacz	Czernigow	May	Riot.
Garadisch	June	June	Jewish quarter burned.
Gaygoula	Ekaterinoslav	May 20	Riot; pillage of agricultural colony.

APPENDIX.

Persecution of the Jews in Russia, &c.—Continued.

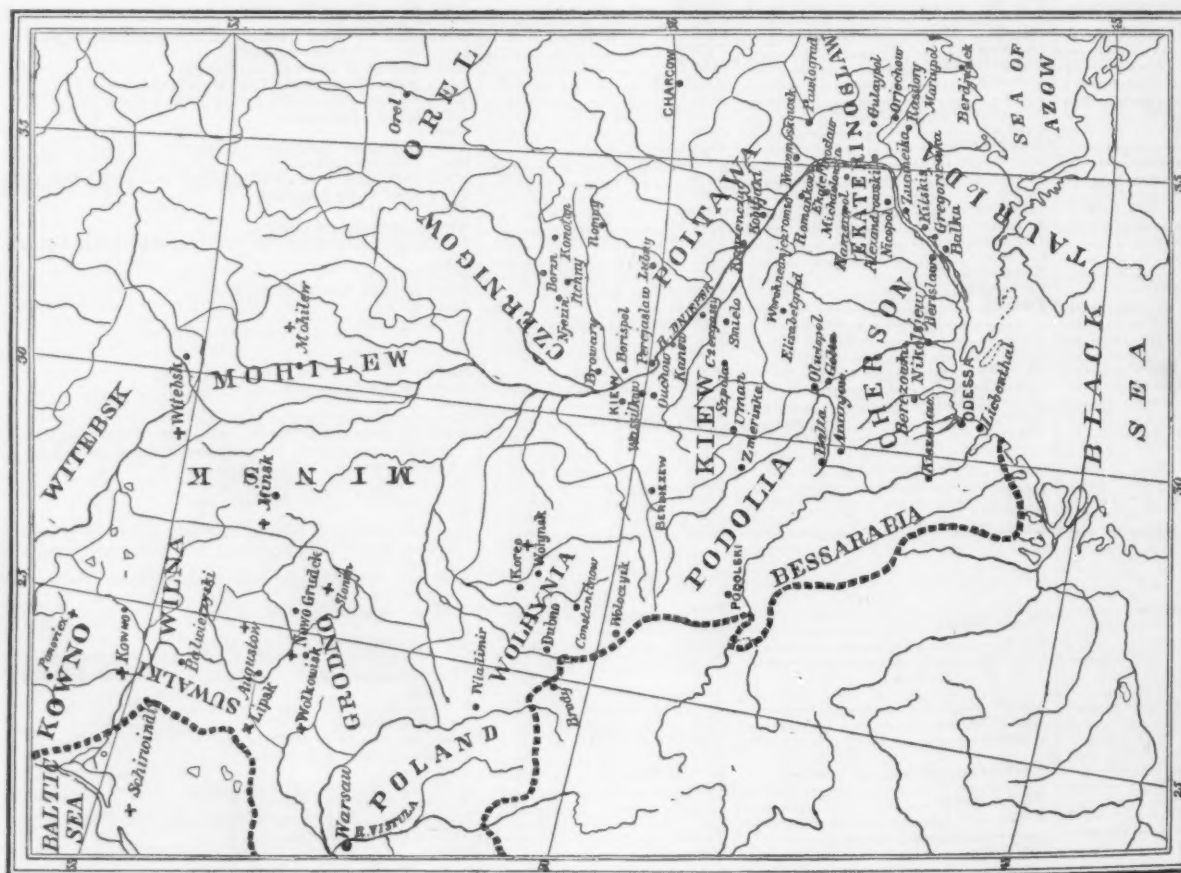

Town.	Government.	Date.	Nature of persecution.
Golts	Cherson, near Olwopol	May 7	Riot; more than 50 arrested; riot foretold.
Gorkaya	Ekaterinoslav	About May 20	Riot; pillage of agricultural colony.
Grafski	Ekaterinoslav	May 17	Riot; pillage; justified by alleged ukase.
Gregoriewk	Taurida	About May 20	Riot; innkeeper Rieffmann placed in one of his own barrels and cast into Dnieper.
Gulaypole	Ekaterinoslav	May 17	Riot; stopped by appeal to elders.
Gusarka	Ekaterinoslav	May 15-20	Riot; pillage of agricultural colony.
Hausarki	Ekaterinoslav	May 15-20	Riot; pillage of agricultural colony.
Hermanowka	Kiew	About June 5	Riot.
Ianchikraka	Taurida	About May 20	Riot; all Jewish houses destroyed.
Itchny	Czernigow	August 28	Riot; further riot, releasing rioters previously arrested.
Jagary	Near Benen	August 23	Jewish quarters fired; 213 houses destroyed.
Jereminka	Cherson	May 10	Riot; houses destroyed.
Kainsk	Toms (Siberia)	June	Riot.
Kalasina	Ekaterinoslav, border of Poltawa	May	Riot.
Kamychevary	Ekaterinoslav	About May 20	Riot; houses dismantled.
Kazienec	Poland	June 15	Riot planned, but prevented by market being changed to Saturday.
Kamishowaka	Ekaterinoslav	May	Jews prevented riot by handing over property on account of supposititious ukase.
Kamychevka	Ekaterinoslav	May 15	Riot; pillage.
Kanew	Kiew	May	Riot.
Kanzeropol	Ekaterinoslav	About May 20	Riot; Jew, Enman, killed; wife violated and killed.
Kiew	Kiew	May 8	Riot; previously announced; governor refused to interfere "for a pack of Jews;" 4 Jews killed; 25 women violated; 5 Jewesses died from outrage; child (3 years old) of Mordecai Wienanki killed by being thrown out of window; 150 Jews arrested; 2,000 Jews left homeless; 3,000,000 rubles lost.
		June	Stricter laws of domicile applied; 4,000 (out of 20,000) Jews expelled.
Kiszenew	Bessarabia	May 14	Riot.
Kitzkis	Taurida	May 16	Riot; Proskoff and 2 little children burnt in own house, in presence of his wife; 25 houses burned to ground.
Kobeljaki	Poltawa	About May 20	Chief rabbi severely wounded.
Konotop	Czernigow	May 10	Riot; wooden crosses placed before Christian doors to distinguish and protect them.
Konski	Ekaterinoslav	May 15-20	Riot; pillage of agricultural colony.
Kopczar	Kiew	About June 5	Riot; pillage; 9 families ruined.
Kopalchuka	Wolhynia, border Galicia	About September 20	Riot; pillage.
Kopanie	Ekaterinoslav, near Orzechow	About May 20	Riot; houses destroyed.
Koretz	Wolhynia	July 5	Fire; 5,000 Jews homeless, 39 burned; 1,010 houses destroyed.
Korsoon	Kiew	April 28	Riot.
Kowno	Kowno	July	Fire.
Krasnosulka	Ekaterinoslav	May 20	Attempted riot.
Kratanowo	Poltawa	June	Fire.
Kremenezug	Poltawa	May	Riot; 2 Jews killed.
Krinko	Ekaterinoslav, near Poltawa	May	Riot.
Krosnye Kotchin	Czerigow	August	Riot; Jews afterward "Boycotted."
Kromonitz	Podolia	November	Jews expelled.
Liebethal	Cherson	August 6	Twenty Jewish families expelled; fine of 50 rubles imposed for harboring a Jew.
Liliaki	Poltawa	July 20	Riot; all Jewish shops destroyed.
Lipsk	Suwalki	June	Jewish quarter fired.
Lorew	Minsk	May 20	Attempted riot after publication of supposititious ukase.
Louborzy	Poltawa	July 28	Riot; Jewish houses destroyed.
Lozowy	Ekaterinoslav	May 13	Riot; pillage of agricultural colony.
Lubny	Poltawa	August 8	Riot; houses destroyed; 1 person killed.
Ludwinow	Kiew	May 10	Riot; spoliation justified by the forged ukase.
Mala Tokinaliki	Ekaterinoslav, near Orzechow	About May 20	Riot; houses destroyed.
Maskowitzkye	Poltawa	June	Riot.
Megeretz	Ekaterinoslav	May 15-20	Riot; pillage of agricultural colony.
Menie	Czernigow	About May 20	Riot; 16 shops sacked.
Michaelowka	Ekaterinoslav	May	Riot; Jew killed; Jewish innkeeper and family burnt alive.
Minsk	Minsk	July 3	Fire; 6,000 Jews homeless.
Mohilew	Mohilew	June	Fire.
Najednaja	Ekaterinoslav	May 20	Riot in agricultural colony.
Nichaefka	Ekaterinoslav	May 18	Riot in agricultural colony; Jews expelled without notice.
Nicholaiew	Cherson	May 15	Riot.
Nikopol	Ekaterinoslav	May	Riot; pillage.
Njestrin (Nigyne)	Czernigow	August 2	Riot; pillage; houses destroyed.
Noguenie	Podolia	June 9	Riot; pillage.
Nowoczerkask	Podolia	September 1	Jews expelled.

Nowopaulowka	Ekaterinoslav	About May 20	Riot; houses destroyed.
Nowosulki	Ekaterinoslav	May 17	Riot.
Obuchow	Kiew	About May 28	Riot; 300 Jewish families homeless.
Odessa	Cherson	May 15	Riot; announced for May 13; governor appealed to in vain; Jew Handelsmann killed; 11 Jewesses violated, one of whom died; loss of property, 1,137,800 rubles.
		June	Stricter laws of domicile applied.
Olchana	Kiew	May 9	Riot; justified by spoliation ukase.
Olwopol	Cherson	May 7	Riot.
Orzechow	Ekaterinoslav	May 7	Riot in agricultural colony; ringleaders dressed as police officers bearing supposititious ukase; 500 cattle, 10,000 sheep driven off by rioters.
Orel	Orel	October 25	5,000 Jews expelled; 400 Jews thrust out into snow on night of October 26.
Onchow	Kiew	May	Riot; 240 Jewish families homeless.
Pawleznad	Ekaterinoslav	May	Riot.
Peregonow	Kiew	May 9	Riot; justified by spoliation ukase.
Perejaslaw	Poltawa	July 12	Riot; previously announced, headed by local tradesmen; fire, 176 houses destroyed; 17 villages in neighborhood deserted; 3 Jews killed.
Pinsk	Minsk	August	Petition for anti-Jewish restrictions.
Petrowki	Ekaterinoslav	May	Jewish quarter fired.
Podolsk	Podolia	May 20	Riot; Jewish family murdered.
		July	100 Jewish families expelled.
Podstepni	Taurida	May 15-20	Riot.
Podwoloczyska	Podolia	June	1,500 Jews driven from their homes.
Pokrowsk	Ekaterinoslav	May 15	Riot imminent, but prevented.
Polonnoye	Kiew	May 22	Riot prevented by postponement of market to Saturday.
Polselvi	Kiew	June	Fire in Jewish quarter.
Poltawa	Poltawa	May	Riot.

APPENDIX.

Persecution of the Jews in Russia, &c.—Continued.

Town.	Government.	Date.	Nature of persecution.
Ponowicz	Kowno	June	Jewish quarter fired.
Potsk	Kiew	May 15	Riot.
Preobajensk	Ekaterinoslav	May 17	Riot; houses dismantled.
Prochorowka	Kiew	May	Riot.
Radsk		June	Jewish quarter fired.
Rasdory	Ekaterinoslav	May	Riot; one Jew murdered; all Jews expelled.
Rowno	Poltawa	About June 9	Riot; pillage; Jewess killed.
Romanowka	Ekaterinoslav	May	Riot; 3 Jewesses violated.
Rzaule	Ekaterinoslav	About July 10	Riot; rioters arrested, but afterward released.
Saratow	Saratow	June 8	Riot; 30 Jews wounded.
Schirwindt	Suwalki	June	Fire in Jewish quarter.
Seminowka	Poltawa	About July 20	Riot; pillage.
Senelnkewo	Ekaterinoslav	June	Riot.
Setel		June	Jewish quarter fired.
Skopetz	Poltawa	May	Riot.
Skopzy	Poltawa	July 28	Riot; Jewish houses destroyed.
Sladkonodnaya	Ekaterinoslav	May 20	Riot.
Slonim	Grodno	June	Fire in Jewish quarter.
Smila	Kiew	May 15	Riot; 13 Jews killed, 20 wounded, 1,600 rendered homeless
Swobodka	Kiew	About May 20	Riot.
Szpola	Kiew	May 9	Riot.
Tarnoroda	Podolia	May 15	Riot; pillage.
Terpienje	Taurida	May 20	Riot; child of Jew Skotloff murdered.
Toskopy	Poltawa	July 28	Riot; Jewish houses destroyed.
Trondubolowke	Ekaterinoslav	About May 20	Riot; pillage of agricultural colony.
Uman	Kiew	May 9	Riot.
Warsaw	Poland	December 25	Riot planned; alarm raised in four churches simultaneously; military not called out; 12 Jews killed, 6,000 homeless, 2,000,000 rubles' worth destroyed; outrages; lasted three days.
Wasansk	Ekaterinoslav	June	Riot announced, but prevented by altering market to Saturday.
Wasiljew	Taurida	May	Mayor read the confiscation ukase.
Wasilkow	Kiew	May 10	Riot; previously announced and justified by the spoliation ukase; 1 Jew killed; wife and 6 children of innkeeper Rykelmann murdered.
Waylowtzye	Poltawa	June	Riot.
Werchednypromst	Ekaterinoslav	May	Riot; 5 Jews killed.
Wiktorowka	Cherson	May 10	Riot.
Witebsk	Witebsk	June	Fire in Jewish quarter.
Wladimir	Wolhynia	October	Jews expelled.
Wojtowzy	Poltawa	July 28	Riot; Jewish houses destroyed.
Wolateisk	Wolhynia	May 14	Riot.
Wolinsk	Wolhynia	October	Jews expelled.
Wolkowisk	Grodno	June	Fire.
Wolwezysk	Podolia	May 15	Riot; previously announced; 30 houses destroyed.
Woskresienka	Ekaterinoslav	May 17	Riot in agricultural colony; Jewish houses destroyed.
Zmorinka	Podolia	May 24	Riot; houses destroyed.
Znamenka	Taurida	May 17	Jew Resser killed, his wife outraged, and both thrown into Dniester.
Zuki	Poltawa	June	Riot.

MAP OF LOCALITIES IN RUSSIA MENTIONED ABOVE.

+ Indicates town where Jewish quarter was fired in 1881. (June–September.) Every other place mentioned in the map was the scene of murder, outrage, or destruction of property.

Admission of Dakota.

SPEECH

OF

HON. JOHN P. LEEDOM,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 17, 1882,

On the bill (H. R. No. 4456) to enable the people of the Territory of Dakota to form a constitution and State government, and for the admission of the State into the Union on an equal footing with the original States.

Mr. LEEDOM said:

Mr. SPEAKER: The admission of a new State is a matter requiring the most solemn consideration when the House deliberates upon it. The determination of the question calls for the exercise of the wisest discretion, and if the formation of a State from a Territory be not wisely done, we are assailing the integrity of the Republic.

As regards the pending bill, I have made a faithful and laborious examination, as far as was in my power, of the various features involved in the application of Dakota for admission as a State, and the result has been that the proposition meets with my unqualified dissent. The admission of a State in fact as well as in name is in accordance with the genius of our institutions, but the admission of a Territory in fact, though a State only in name, is a violation of that system on which we must rely if we propose to maintain in the coming century the government of the past.

What constitutes a State under our system of government? In my mind she appears as a political being, clothed with such powers of sovereignty that no Territory should assume its worthiness until it is full-grown, and until its capacity for equally bearing its share of the burdens of sovereignty have so developed that it will have no use for swaddling-clothes.

Go back in our history and look at the thirteen States that met the shock of oppression and drove the oppressors from our soil. Observe what glorious records they have of patriotism, bravery, and endurance recorded of their sons! Observe the love which was implanted in the hearts of the succeeding generations for the honor and fame of these ancient Commonwealths! Mark the energy and grandeur of the character of the men of those times, and when the picture stands out plainly in your minds, when the result of their labors, their devotion to principle, and their heroism surround you in the work which is the product of a century, you will, I feel assured, readily appreciate the nature of the distinction I draw between a State and a Territory.

I wish to say here that I do not propose to detract from the claims which the pioneers of the West have upon us. I have watched their energetic course with delight as they have overcome, step by step, the obstacles in their path. I have seen them scale the mountains and by their endurance and labor level for practical uses their summits with the plains. I have seen the wilderness disappear before them and fertile fields take its place, and the fruits of their soil and the stream of mineral wealth torn from the close embrace of rocky ledges and mountains which has poured unceasingly toward the East, extending our commerce and opening upon our land the horn of plenty. I am aware of the sufferings and bravery of these pioneers, and have recognized in them the capacity to build up States of which we may justly be proud and welcome to a union with us on terms of equality; and therefore I wish to declare that no one can surpass me in the deep interest I feel in the growth and development of these Territories, and no one will more gladly than I extend the hand of fellowship to them when they stand before us seeking admission with the proofs of their capacity for statehood.

The child who assumes too early the duties and responsibilities of manhood generally falters in the race of life and falls far short of the goal which his trained capacities would have enabled him to reach; and in the same way may the destiny of a State be determined if at the very threshold of State existence it is subjected to imperious influences which it is powerless to withstand; and the inability of its citizens to bear up against the untoward events assailing them may become a potent cause of their failure to obtain that high development of their institutions essential to a State. The relation which this great Government bears toward the Territories is parental in its character.

Its moral force must pervade them in order to implant the principles among the people which will make them capable of adopting and observing a State constitution representing Republican principles and of subsequently passing laws in furtherance of these principles; and not until these principles are firmly rooted should a Territory aspire to grasp the scepter of sovereignty which would be conferred by her admission into the Union as an equal and independent State. But the moral effect is not all. These Territories are just entering on civilization, and the views of life entertained by the inhabitants are crude and ill fit them to guard, preserve, and develop their resources in that manner which is vitally necessary to their

success as States. It is precisely at this stage that the discretionary power of Congress should be applied.

A State may be nominally created by legislation, but that which constitutes a State cannot by this means be injected into its organism. The people of a Territory must do this work for themselves, and they can do it far better in their Territorial condition, under the parental care of the Government, than as States struggling for existence and burdened with heavy taxation. They must build up an individuality and make such progress in the paths of civilization, show us citizens of such intelligence and manhood, institutions so thoroughly in accord with the principles of our Government, such success in the past as to give a brilliant promise for the future before they should receive the hand of sisterhood and be constituted States equal to those whose work has been already well done, and share with them the honor of their traditions and the benefits of their labor.

The machinery of a State government is most intricate in character, and when defective it is fatal to the progress of the State. Of this fact there have been so many illustrations in the past twenty years that I feel satisfied no one will deny the proposition, or even fail to agree with me that the destruction of values, the decay of all large material interests, and corruption of the political nature of the people must inevitably result from the operations of a defective, ill-regulated, or corrupt government. The Government is powerless to correct the evil, when once the State has been created, which may be inflicted upon it if there be no constitutional power to invoke for that purpose, and I am therefore led irresistibly to conclude that no State should be admitted into this Union until her population is large enough and wise enough to give proper tone and character to the people for centuries to come, and until her interests are such that she needs to exercise her right of self-government I shall insist that she remain where her condition of development places her, and where she cannot by her action as a State impair the integrity of our system.

A State should be the exemplar of the highest condition and most perfect organization of security. Many injuries would result to the Territory and its citizens if prematurely made a State. Legislation would not be free, honest, and untrammelled. The expenses of conducting the State government would be burdensome, and the immaturity to-day would impair its efficiency in the future. I do not believe if the people of Dakota knew what a burden they were preparing for themselves that they would consent to give up the advantages which they enjoy under the paternal care of this Government to acquire those supposed advantages which the politicians have tendered them. The explanation of this movement shows plainly that it is not an appeal from the people of Dakota, but the result of the machinations of a few ambitious members of the Republican party in Dakota and of that party itself, with perhaps an exceptional Democrat who has been promised a judgeship for his disinterestedness.

Our political history is full of illustrations of the correctness of this view of the question. Oregon in 1854, and again in 1855, refused, by a vote of her people, to enter the Union. Mr. Hughes, in the debate on the admission of Oregon, said:

The people of this infant State preferred to bear the expenses of their Territorial government to be defrayed out of the national Treasury to assuming the burdens of taxation incident to a sovereign State. They remained contented with their Territorial government, engaged in agriculture and trade, developing the resources of Oregon, growing in wealth and numbers, and accumulating steadily all the elements of a prosperous and powerful State.

The first question which I propose to ask this Congress is what proof they have before them that the people of Dakota are seeking admission for their Territory as a State?

I am well aware that persons claiming to be citizens of Dakota have appeared here in Washington urging the passage of this bill. I am aware that some of them appeared before our committee in behalf of this bill, but I ask this House what element of the population of Dakota these gentlemen represent? What proof have we that they were the spokesmen of the larger portion of the citizens of Dakota? This is the first step they should have taken, but they brought us no credentials from the farmers of Dakota. On the other hand I have received numerous letters from prominent agriculturists of that Territory protesting against its admission.

They say that the farmers of Dakota do not wish to change their form of government; that it will prove injurious and burdensome to them; that the movement is exclusively in the interest of certain politicians who are seeking to gratify their personal ambition; that the delegates who went to Washington did not represent the people, and were all from the towns, none from the agricultural classes, and they did not consult anybody aside from politicians as to their wishes. Some of the delegates since their return have said that they could not now say they were in favor of admission; that they went to Washington because they could go cheaply, and they had heard other delegates say the same thing; they say that if Congress could look upon one of our legislative assemblies, such as we had in the past and are likely to have for some time to come, they would unanimously say that such a body of men were not capable of self-government; we believe that if Dakota is admitted as a State now, in less than two years we shall be burdened with debt, county and

State, that will be crushing upon our people. Shall we disregard this protest, Mr. Speaker, and force this people to change their form of government?

I do not propose to cast one word of discredit on those who have urged the passage of this bill, but I say that with this conflicting evidence as to what the wishes of the people of Dakota are, and especially of those who till its lands, that it is our duty before this bill should become a law to satisfy ourselves completely that the agriculturists are in favor of it, and I know nothing before us which would justify such a conclusion, while the presumption that it is not the case is of the strongest character.

This question was ably considered by Mr. Foster, in the Thirty-eighth Congress, in the debate on the admission of Nebraska. He said:

If twenty-five thousand people in that far-off region are desirous of paying the expenses and bearing the burdens of a State government, it seems to me wonderful. I should like very much to know how many of the population of that Territory have asked to be made a State. For one, I would not wish to impose upon them the burdens of a State government without their asking for it. It will make taxation very heavy to sustain a State government there.

It is very easy to conjecture how there may be apparently a desire in a Territory to be made into a State. In the first place, a Territory is not represented in this body, and a State has two Representatives here. Then again there are various offices which are not filled while the Territorial condition continues. Some half dozen influential and ambitious men who aspire to be Senators and members of the House of Representatives and district judges may very easily get up an apparent desire in the population of a Territory to be made into a State. But how far, outside of the men who aspire to these offices, does this desire extend? How far does it extend among the mass of the people? Who is it living in a Territory that would not prefer to have it continue a Territory until it had assumed the size and proportions of a State than to have it made prematurely into a State? Who except the men who expect to hold these important offices?

I approach now, Mr. Speaker, one of the vital questions connected with this proposed measure, and that is whether the Territory of Dakota has such a population as to entitle her to admission as a State. This I term a vital question, because it concerns a principle which has entered into our system of government from the beginning, the observance of which has been productive of good, and the violation of which is fruitful of evil and harm.

We have had some figures submitted to us, and it is my purpose to review them, in order to show that Dakota has not the requisite population.

By the census report of 1880 the population of the entire Territory is set down at 135,000, of which the statement by counties gives to that portion of the Territory lying south of the forty-sixth degree of north latitude 87,059, so that it would require a gain or increase of about 60 per cent. in little more than a year to give to Dakota the requisite population.

It is assumed by the friends of the bill that this increase has taken place; but as I shall later deal with the evidence in support of such a proposition which has come before us, I shall satisfy myself at this point by declaring my belief in the utterly unfounded and unreasonable character of the assertion, and I do not think it will be seriously maintained on this floor. I regard this fact alone as sufficient to determine this question, since it shows conclusively that Dakota cannot now have a population equal to that necessary to secure the return of a Representative from a Congressional district to this House. A comparative statement contained in the census report for Dakota of 1880 gives the number of male adults in the entire Territory as 50,000, and the women and minors as 85,000. From these figures we arrive at the proportion of one voter (assuming all male adults entitled to vote) on a general average to one and seven-tenths of the non-voting population. By making use of this proportion we can throw some light on the question as to the population of Dakota in 1881, and inferentially now. At the poll assessment made in 1881 in Dakota there were listed in the southern part 22,174 names.

This result is arrived at from the poll lists in twenty-one counties and estimates in the remaining eleven of the number of polls listed therein by officials of the Territory. If we apply to this vote the proportion of one and seven-tenths for the non-voting population in the thirty-two organized counties of Southern Dakota, it will show a population of 59,870, and when we add to this sum 2,704, which is the population of the remaining thirty-two unorganized counties, we have a total population in Southern Dakota of 62,574, with 25 per cent. added for the increase in the unorganized counties, amounting to 676, which gives a total of 63,250, or 23,809 less than she is credited with in the census report of 1880, which indicates a reduction in the number of the population by emigration, or inaccuracy in the poll assessment.

The poll list which is the basis of this calculation is shown to be reasonably large by the vote cast for Delegate in 1880, which was 21,042. One year later the poll list referred to in Southern Dakota shows 22,174 as subjects of a poll tax in one-half of the Territory, being 1,132 voters more than were polled in the entire Territory the previous year.

One of the chief causes of the non-voting population being so little larger than the voting population is due to the fact that while the male adults are equally divided in numbers between native whites and those of foreign birth, the children of the latter only amount to 50 per cent. of those of the former. On this line of estimate we have then in Southern Dakota about 2,500 male adults, of which only one-half are native whites, and it is with this element and this

population that it is proposed to bring this Territory into the Union as a State.

In presenting this comparison we do not propose to substitute this estimate for the results contained in the census report in 1880, but by showing the poll assessment in 1881 to have been in Southern Dakota but 22,174 in the organized counties, we show the impossibility of any such increase having taken place since 1880 as has been alleged.

It follows from this that whether you go to the census report for information or to the poll lists, and make a reasonable allowance for the increase of population since the date those figures were determined, you still cannot bring up the population to a point which would entitle her to admission, if there be any regard left for a principle which was one of the land-marks of the Government. That Congress has the right to use its discretion, whether a Territory has the requisite population or not, is not open to question. Contingencies might have existed which made it necessary to admit a Territory as a State which did not have the proper amount of population; and, on the other hand, it might not be thought wise or prudent to make a State of a Territory although it had the ample population.

It is precisely at such a stage as this that the discretion of Congress is to be exercised, and for that reason I have examined the question whether there is anything specially demanding action in the case of Dakota which would justify us in admitting her without the requisite population, and I have been unable to find any justification for such proceeding. She is not oppressed, but on the contrary, by the representation of her friends, is enjoying a high degree of prosperity. Nothing imperils her safety or checks her development, and so long as this Government feels able to extend to her the same care and attention, it is certainly to her advantage to continue to receive it. She has choice agricultural lands, and in the Black Hills rich mineral deposits. She has fences and farming implements, but when the whole value of her personal property is summed up it amounts only to seven millions in the entire Territory. The present assessment of the Territory produces a tax of \$500,000, being about 2½ per cent. on all the real and personal property of the Territory, with the payment of which, together with the increased expenses of a State government, this property will be chargeable.

The following details from the census report of 1880 give the values of the entire Territory: Her manufacturing interest is but \$691,763; material for manufacturing, \$1,534,716; the value of the product, \$2,442,755. Her live stock is estimated at \$6,463,274 and her farms and implements at \$24,791,175. What there is is agricultural. The farms, the stock, the produce of the dairy make up what there is of the Territory, and yet none of these men who control this interest are here to ask for the admission of Dakota. Until they come I hope, Mr. Speaker, that no vote will be cast in this House to force them in; for it will oppress them and add additional burdens for them to bear.

There are sixty-four counties in Southern Dakota, and of these thirty-two are organized. These thirty-two counties, in which is almost the entire population of the Territory, have only 25,000 square miles of area, while in the thirty-four unorganized counties, sixteen of which have no population and only two over three hundred, there is an area of 47,160 square miles.

The organized counties cover a little more than one-third of the area of Southern Dakota, and the two localities of population are widely divided. Three counties, Custer, Pennington, and Lawrence, are at the southwest corner of the Territory, while the other twenty-nine are at the southeast, and between these two settlements extends a vast unbroken wilderness, unsettled and unpopulated, and forming an almost impervious barrier to intercourse between the two populated localities.

A glance at the map will show the wide extent of the wilderness between Yankton and the Black Hills. As I looked at this map it was suggested to my mind that a dividing line from north to south could be run with more propriety.

While referring to the extent of the area of Dakota I wish to advert to the claim urged by the friends of the bill, that the number of pre-emptions, homesteads, and cash entries that have been made since the flush days of Dakota show the requisite increase of population since 1880. I have very little to say with reference to this. This evidence is not valuable. The records of our land legislation relating to the Territories and its result have long since deprived this character of evidence of any value. This is really one of the evils which I fear will help to work the ruin of Dakota, and against which I am contending. I assume that the admission of this Territory at this time would be followed by a similar chapter to those which have recounted the spoliation of lands in the other Western Territories.

Therefore I cannot accept these entries as any proof of an increase of population; but even were it capable of substantiation that every one of these entries was a personal one, made in good faith by the head of a family, the conclusion drawn from this would be incorrect, since the estimates are made that there are four members to a family, whereas the census shows but 2.7 on a general average. Why, Mr. Speaker, should it be sought to establish the extent of this population by such evidence as this when we have always the opportunity to enumerate it and so settle all doubtful questions and determine absolutely when the proper population is reached that such is the case?

It is by the report of the census, by the poll lists, or by a general recognition of a large population that this question is capable of determination, but the fact of sufficient population does not *per se* entitle a Territory to become a State and be received into the Union. The course of the Government in regard to Utah has shown this to be true. Utah has made repeated efforts to secure admission, and has always been denied at the entrance. Why was this? Because the power rested in Congress to declare, as they did in effect, that there was an element in Utah not in accordance with the genius of our Government. They felt that harm and injury might result from closer contact with that element if clothed with the powers of a State, and hence exercised their wisdom by refusing to admit a Territory, although her population in point of numbers was sufficient.

Immortality, if I may so call it, is not the only evil which should be kept from fellowship with our States. Immaturity is equally if not more dangerous. It might sap the foundation of our system of government. It might open the way to the entrance of corruption within the body-politic, and, like the entering-wedge in the timber, rive asunder the fibers which knit us together.

Look at the evils which have already come to this country from the violation of the principles I have laid down. I see in a debate on the admission of Oregon a statement to the effect that Florida was admitted with a less population than the ratio of representation at that time. This is true, but also true that at the time Florida made her application for admission she had sufficient population. This rule was adhered to in the admission of the first nineteen States and until the admission of Oregon.

Oregon was entitled to admission by an act of Congress whenever she had a population of 60,000. In the case of Kansas great political questions were being agitated, which for the time being subordinated minor considerations, a question which since that day has made itself felt in every part of our system. In both of these cases it is fair to presume that Congress felt called on to exercise her discretionary power. But however wisely it was done, however pure and patriotic the motive, the effect was undeniably bad, for it was used as a precedent in 1864 to select three petty Territories, so far as population and resources were concerned, and make them States, thereby checking their progress and development, in order to make use of them to maintain a political party in power.

Congress then for the first time violated a principle on which the safety of the Government depends and which had before been held sacred.

We have suffered greatly already for this. The rich and fertile lands of these Territories have passed from our ownership; the rich forests of timber have been made the object of spoliation and the stately trees leveled to the earth. Dishonest transactions in lands and sham railroad and mining enterprises have made the name of our people a by-word in the lands that have governments. All this could have been avoided had the Territories been allowed to work out their own salvation, develop themselves gradually and honestly to that point of maturity where they were capable of becoming States, a point where there would be developed in the hearts of their citizens sentiments of State pride and devotion to the honor of their Commonwealth. But the withering simoom of political destruction swept down upon them and swallowed them up.

Look at Nevada to-day. Twenty years ago her prospects were as bright as those of Dakota are pictured to us to-day; now she is gutted, her timber is gone, her lands deserted, her minerals absorbed, and her population diminished, all the results of the greed, avarice, and partisan political feeling which subjected her to such an ordeal. It is proposed, Mr. Speaker, to repeat this experience with Dakota for the same purposes, and I wish here as an American citizen to offer my most solemn protest against it. When I commenced my remarks, Mr. Speaker, I said that Dakota, not having a population equal to that provided for by the apportionment law for a district entitled to a Representative, was not entitled to admission. I have in the course of my remarks distinctly stated that I recognized the discretionary power of Congress to admit a Territory as a State if she saw fit, provided an emergency existed which made it necessary, as either the accomplishment of great good to the Government or Territory, or the prevention of great injury to either. I stated further that I saw no such exigencies presented in the case of Dakota, and in that connection desire to say that I think this Congress could take no more valuable steps than by reaffirming this principle with regard to the extent of the population. I desire to call the attention of the House to some of the views expressed here when a similar question was under discussion.

Mr. Grow, in the Oregon debate, referring to the causes which would justify a departure from the rule of population, said:

Have they any unredressed wrongs too grievous to be borne under the Territorial government under which they live? And is it for that reason that we are asked to change it? They have a Territorial government, so far as I know, entirely satisfactory to them.

Continuing, he says:

Show me the people in any of the Territories toward whom the Executive of the Republic fails to perform his duty, and who are left in a state of civil war, with no arm of the Federal Government raised to protect them in their rights or shield their firesides and hearth-stones from violence and wrong, and I will vote to admit them as a State, with a constitution not inconsistent with the guarantees of the Constitution of the United States, and thus relieve them from the despotism of the Federal Government, whatever their population, whether twenty or one hundred thousand.

This serves to illustrate very clearly the high character of the exigency which would justify a departure from the accepted principle of population. What authority President Buchanan attached to this principle may be gathered from his annual message. He declares "that any attempt by the people of Kansas to form a State constitution before the number of their people reaches the required amount would be in express violation of the provisions of an act of Congress," and in the judgment of the President therefore could not lawfully be made. Mr. Clark, of Missouri, in the course of the same debate, said:

So long as I am a member on this floor I will never vote to admit any Territory as a State after this which has not the population equal to that required for a Representative from my State. It is the true doctrine, the doctrine of the Constitution and the doctrine of representative government.

General Zollicoffer said:

I was adverting to the fact, Mr. Speaker, that the habit of requiring that a State should have a population equal to the ratio of representation is the general usage of the country.

And on what principles of right and propriety is it founded? It is founded in great wisdom, and is in my judgment essential to the safety and durability of the Government itself. It is founded on the idea that it is wrong to give to States having no population power to control States having great populations; wrong, for example, to give to a little community having one-thirty-fifth part of the population of the State of Ohio a power in the Senate of the United States and in the House in Presidential elections equal to that of such a State.

Mr. Seward made a declaration during the Oregon debate which very directly applies to the condition of Dakota. The rule he thought was "that where the interests of both the Government and the Territory would be best subserved by the admission, that the question of population would not be a positive factor if it could be shown that the area of the Territory is not unduly proportionate to that population." In the case of Dakota there is presented the most marked example of disparity between the population and the area to be found in our country, and one which would have fully met the case suggested by Mr. Seward.

The proposition enunciated by Mr. Nicholls in the same debate referred to was that "if population be no test as to the right to exclude a State from admission, it follows conclusively that the requisite ratio does not entitle it to admission." Mr. Boyce, of South Carolina, said:

The most important principle in reference to the admission of a State is that it shall have the proper number of inhabitants. Where is this thing to end if a mere handful of men here and there can form States for admission into this Union? It is a mockery of our system of government that thirty, forty, or fifty thousand men here or there, or anywhere within our limits should be allowed to send two Senators to the other House of Congress. Why, sir, it brings our whole system into disrepute. What I insist on is that no new State shall be admitted until she has a population equal to that now necessary to entitle her to a member of the House.

There is much food for reflection, Mr. Speaker, in the suggestion of Mr. Nicholls in the course of the above debate, that if a less population than the ratio was not a bar to admission, then its possession would not entitle the Territory to admission. The force of this is to show the necessity for some rule applicable in all cases where a Territory seeks admission as a State, and in the absence of any improvement on that limitation which was observed for so many years it is to be hoped that this Congress will reaffirm that principle not only by its action in the present case but by so affirming that it will, as far as possible, exert its influence on the next Congress which shall have similar bills to consider. Believing as I do that nothing could prove more detrimental to the interests of Dakota than to be burdened with an expensive State government, to be exposed to the effects of party politics, and believing further that the bone and sinew, the farmers, do not want the change made, I have endeavored to show the evils which the passage of this bill would inflict upon this Territory. And in doing this I have been actuated only by the kindest feelings for that Territory and for its people.

But having devoted so much of my time to this branch of the subject, I desire in conclusion to call your attention to what I regard as a matter of far greater importance. I refer to the injury that the admission of immature States would inflict on the Federal Government. The grand character of our system has been illustrated by our achievements and progress. The devotion felt for our Constitution and for that well-regulated system which seemed to have provided for almost every emergency which could occur for centuries to come was the great secret of the devotion of the people to law and order. It is the preservation of this condition of things which will perpetuate this Republic. It is holding as sacred the ancient landmarks and practices of the patriotic fathers of the earlier days which will prevent our system from becoming impaired through the effects of the vicious assaults constantly made against it. It is for this reason that I urge upon this House what I hold to be a duty, the reaffirmation of a principle which belongs to our past, and the departure from which must be productive of the greatest harm.

This injury is referred to in the extracts which I have read from the Oregon debates. They picture a party which, selecting a small community, confers on it statehood, and enables it to send two Senators to Congress and have an equal vote in the House with the largest State in the Union in a Presidential election, solely with a view to perpetuate its power. I have already referred to some of the evils

we have suffered from the admission of immature States, but those are slight compared to those which confront us in the future, if this practice is permitted to grow as it will do as the necessities of one party or another suggest such a step as expedient for their permanency of power. You gentlemen on the other side of the House have no right to demand of us greater political honesty than you yourselves display; and you can readily see how, if you add Dakota to the column of petty States, we might be led in a moment of power, which is already visible on the political horizon, to favor the division of Texas, which has area and population sufficient on that basis to make five States with an area of over fifty thousand square miles each, which would have within itself in its resources everything requisite for statehood.

But I regret to look at such a picture, for in such acts, done for party supremacy, I fancy that I see the gradual destruction of our Constitution, the tottering of our magnificent system of government, and failure and ruin taking the place of prosperity and happiness. I see the purity of our judiciary vanishing at the touch of partisanship, and our legislative bodies subjected to charges of corruption.

That no such calamities may ever befall us, we must halt at the beginning and make no encroachment on the palladium of our liberties, and in behalf of the preservation of our governmental system intact I appeal to this House not to ignore a principle which grows out of the Constitution, for party purposes. I appeal to them in behalf of Dakota, that her farmers may not be impoverished and despoiled by having a burden imposed on them which they do not seek; and finally to that sense of justice and honor which must control this House, not to permit a law to be enacted which is unjust to a people and dangerous to the Government.

Mr. Speaker, I desire to add as a part of my remarks the views expressed by Hon. G. G. Vest, a Senator from the State of Missouri, in dissenting from the report of the majority of the Committee on Territories:

Mr. Vest, from the Committee on Territories, submitted the following views of the minority, to accompany bill S. No. 1514:

The undersigned, a member of the Committee on Territories, begs leave to dissent from the report of the majority of said committee recommending the passage of Senate bill No. 1514, entitled "An act to enable the people of the Territory of Dakota to form a constitution and State government, and for the admission of the state into the Union on an equal footing with the original States."

It is certainly the theory and object of our Constitution that representation should be equal, so far as possible, between the citizens of the United States. In section 2 of the Constitution it is provided that "Representatives and direct taxes shall be apportioned among the several States which may be included within the Union according to their respective numbers," &c.; and in section 2 of article 14 of the amendments to the Constitution it is provided that "Representatives shall be apportioned among the several States according to their respective numbers," &c. These provisions manifestly apply to representation in the House of Representatives and to States after they are admitted into the Union.

Section 3 of article 4 of the Constitution provides that "New States may be admitted by the Congress into the Union," and this enactment leaves to the absolute and unlimited discretion of Congress the decision when the people within a certain Territory shall receive, not only their equal representation with other citizens of the Union in the House of Representatives, and coequal representation with the other States in the Senate, but also the right to appoint, in such manner as the Legislature thereof may direct, a number of electors equal to the whole number of Senators and Representatives to which the State may be entitled in the Congress.

While no other provision is found in the Constitution as to the admission of new States than that before quoted, and no law or rule binds or limits the action of Congress, it would be a manifest violation of the spirit and intent of the Constitution to admit a State into the Union without at least the population requisite under the existing law of apportionment for a Representative in the lower House of Congress. To give to a smaller number of people than that fixed by the general law of apportionment a representation in the House would be to establish unequal representation; nor is the number of people in a Territory applying for admission as a State the only question to be considered by Congress. While there should be at least the population required by the general apportionment, and this without question, justice to the other States and other citizens of the United States requires that Congress should consider the necessity for creating a new State, the character of the population, and its probable future.

To ignore these considerations would be simply an abdication by Congress of its high constitutional discretion and the placing in its stead the enumeration of a census. In our representative Government, based upon universal suffrage, every State and every citizen is directly interested in the question of admitting a new State into the Union—not only as to the simple inquiry in regard to the aggregate of population so admitted but as to its character and probable influence upon the common destiny of all the States: for it is manifest that the danger to free institutions lies after all in vicious suffrage and its corollary of vicious representation. Besides, if Congress should look only to the amount of population, it is evident how shamefully party greed and ambition could, by filling up the sparsely settled Territories, swell the vote of the electoral college to any number required for party purposes.

In the earlier days of our history, when the great necessity seemed to be population, and when a continent offered its vast domain for settlement, precedents in Congressional action as to the admission of new States can be found at variance with the principles here stated.

Out of the twenty-five States admitted into the Union since the adoption of the Constitution, six have been admitted without the ratio of population demanded by the existing apportionment for a member in the House of Representatives, but it must be remembered that the generally accepted proverb that "in numbers there is strength" then governed the action of Congress over and above all other considerations. Our vast domain seemed illimitable in its capacity for population, and it was only natural that Congress should regard with favor every proposition looking to the increase of the number of those who could develop the resources of the immense territory only awaiting the enterprise and toll of the pioneer. The tide of immigration now pouring upon us from all portions of the world has made the matter of population simply one of conjecture, and we must regard it only as a question of time when every foot of our vast possessions will be occupied and utilized.

There is no necessity now for rushing new States into the Union, unless that necessity is one of party. The welfare of the country does not require it, and unless there are exceptional reasons for admitting into the Union a sparsely settled Territory, the number of its population a matter of surmise, Congress should at least look with suspicion upon the hot haste with which the measure is being urged.

The area of the proposed State is 80,000 square miles, or 320,000 quarter sections of 160 acres each, or 51,200,000 acres; and upon this immense territory the friends of the measure claim that there is now a population of 175,000.

In 1880 the census enumeration showed within the limits of the proposed State a population of 160,500, including Indians, and as there has been no enumeration since, the increase to "175,000" is simply a matter of computation based upon land-office entries and the assessed value of property.

It is urged, however, that the amendment to the bill providing for a new enumeration of population, and making the admission as a State contingent upon that enumeration, meets any objection as to population: but it is enough to say that, anxious as the friends of this measure in the Territory are to secure its passage, the requisite number of people to reach the ratio of the present apportionment for Representatives in Congress will as certainly be developed by the proposed census as that the enumeration is had. Without at all reflecting upon the motive of the majority of the committee in proposing this amendment, it is my deliberate opinion that it can only result, if adopted, in a fraudulent enumeration, showing upon its face in any event a sufficient number of people in the proposed State to insure its admission into the Union.

There are too many personal ambitions to be gratified, too many private interests to be subserved, leaving out of view the partisan aspect of the question, to make it a matter of the slightest doubt that the proposed enumeration will meet every requirement in the way of population. Two seats in the United States Senate, one in the House of Representatives, the various State officers—executive, legislative, and judicial—and more than all, three votes in the electoral college, constitute a mass of temptation which the history of men and parties in the past should deter Congress from offering to the people of Dakota in the shape of the proposed amendment. Even the accuracy of arithmetical enumeration will yield to prizes so near and so alluring.

Nor is there any exceptional reason or necessity shown for the immediate admission of the new State into the Union. If the statements of the advocates and friends of the pending measure are to be received even with great allowance, the proposed State is now a Territorial elysium and the people in the enjoyment of every possible blessing to be obtained from religion, education, or benign and just laws.

By reference to a pamphlet submitted to our committee by the advocates of the bill, entitled "Dakota's claims for admission," it will be seen that in the proposed State in 1881 there were 128 church buildings; 850 school districts, with 937 teachers; 4 national and 44 private banks; 70 weekly and 5 daily newspapers; a fleet of steamboats, and 756 miles of railroad completed and in operation. We are further informed by this pamphlet that—

"The financial condition of the proposed State is most excellent; * * * the financial condition of the various counties is good, only two counties having any indebtedness that is likely to inconvenience them. One of those two incurred the debt by granting aid to a railroad company, under an act of Congress."

It is to be regretted that the friends of the pending bill have deemed it proper to drop this financial history with a statement so abrupt, thereby leaving the impression that Congress by authorizing aid to a railroad company became to some extent or in some degree responsible for the subsequent history of the indebtedness so authorized.

And this is the more to be regretted for the reason that a protest against the admission of the proposed State of Dakota has been presented to the Senate and referred to this committee, which creates the painful suspicion that the people of the proposed State have neglected the religious and moral advantages so conspicuously set forth in their pamphlet, and have been guilty of such naked and palpable repudiation of the indebtedness alluded to as to render them especially anxious to say as little upon the subject as possible. Unwilling to adopt hastily a conclusion so damaging to the fair name of a young and ambitious community already aspiring to membership in the Union, and also believing that no "State" should be so admitted whose people have been guilty of repudiating an honest and lawful indebtedness, I have carefully examined the charges made in the protest and the prayers offered and now lay before the Senate the result of my examination.

In the spring of 1871 the counties of Yankton, Clay, and Union, which then embraced the most thickly settled portion of Southern Dakota, were exceedingly anxious to obtain a railroad which would give them communication with the outer world. With this end in view, the acting governor of Dakota Territory called a special session of the Territorial Legislature, which convened at the capital, in the city of Yankton, on the 18th of April, 1871, and continued in session for several days. At this special session an act was passed entitled "An act to enable organized counties and townships to vote aid to any railroad, and to provide for the payment of the same," which was approved April 21, 1871. (See side pages 14 to 17, inclusive, of the printed record on file in the clerk's office of the Supreme Court of the United States, in the case of the First National Bank of Brunswick vs. The County of Yankton.)

After this act had been passed the Dakota Southern Railroad Company was incorporated under the general laws of Dakota Territory. (See side pages from 19 to 21, inclusive, of the same record.) Its incorporators embraced some of the most prominent men in the Territory, such as ex-Governors A. J. Faulk and Newton Edmunds, United States Judge W. W. Brooks, Hon. G. C. Moody, George W. Kingsbury, J. M. Stone, Dr. J. A. Potter, J. R. Sanborn, James S. Foster, C. S. Elsemann, F. J. DeWitt, and others. (See side page 21 of said record.)

The charter of the company stated the purpose of the company to be to construct and operate "a line of railroad from the city of Yankton, on the Missouri River, eastward through the counties of Yankton, Clay, and Union, to a point on the Big Sioux River, between townships Nos. 88 and 93, both inclusive." (See side page 20 of said record.)

Afterward, and in pursuance of the act passed at this special session of the Territorial Legislature, a petition was presented to the board of county commissioners of Yankton County asking that body to submit to the qualified voters of said Yankton County a proposition to extend aid by donating \$200,000 in county bonds of said county to the Dakota Southern Railroad; said bonds to run twenty years, with coupons attached, bearing interest at the rate of 8 per cent. per annum, and to be given to said company in payment for grading, tying, building, and other necessary work on said railroad proposed to be built by said company. (A copy of this petition may be found on side pages 22 and 23 of said printed record, and a copy of this petition is also attached as Schedule A to the protest introduced in the Senate March 21, 1882, by Senator HALE.) The petition, it will be noticed, is signed by the most prominent men in the Territory, and among the names may be found those who are to-day the strongest advocates of repudiation in the Territory.

In pursuance of this petition and in accordance with the terms and provisions of said act of April 21, 1871, an election was held on the 2d of September, 1871, in Yankton County, at which the proposition to issue said bonds as specified in said petition was carried by a very large majority. (See side pages 24 and 25 of said record.)

Subsequently the board of county commissioners entered into an agreement with the said Dakota Southern Railroad Company by which it was agreed to issue to said railroad company said \$200,000 in bonds to aid in the construction of its road, and the railroad company on its part agreed in case said bonds should be delivered to it before the road was fully constructed and completed that it would execute a bond to the county in the penal sum of \$400,000, conditioned that said railroad should be completed "from the terminus or some station of some railroad leading into the city of Chicago, Illinois, to and within the limits of the city of Yankton,

as such limits existed on the 5th of August, 1871, by virtue of the charter of said city, and in running order, constructed as well as the average of Western roads, and trains of cars actually run thereon and with its track connected with some road running to Chicago of the same gauge, so as to give direct railroad communication between said city of Yankton and the city of Chicago without necessitating the transfer of freight at any such point of connection," on or before the 1st day of January, 1873, or in case of a general overflow of the Missouri River bottoms, then on or before the 1st day of July, 1873; and in case of failure to comply with all the conditions of said bond within the time aforesaid, the bond was to provide that the damages should be liquidated at the face amount of the bonds actually issued, with all interest that should have accrued thereon up to the recovery of judgment upon such bond, and \$10,000 additional to cover expenses of engraving and issuing the said bonds and all other expenses the county should be put to by reason of such extension of aid. (See side pages 24 to 29, inclusive, of said record.)

Not long after this, and before any of the bonds had been issued by the county, a question arose as to the right of the Territorial Legislature to convene in extra session, and as to the validity of a railroad charter granted by a Territorial Legislature in view of the implied inhibition of a Territorial Legislature to grant a railroad charter found in the act of Congress passed March 2, 1867. (See 14 Stats. at L., page 426; also section 1889 of the Revised Statutes of the United States.)

In consequence of this doubt as to the validity of the railroad charter and as to the validity of the act passed at this special session, Congress was asked to recognize said act as a valid act and said railroad charter as a valid charter. But Congress, deeming the act which applied to all railroads and all counties in the Territories unwise in principle, annulled the act except so far as it related to this particular railroad and the bonds voted thereto. (The township of Elk Point, in Union County, had also voted \$15,000 in bonds to aid the same railroad; see side page 59 of said printed record; and that township has during the last five years been following the example of Yankton County in repudiating its bonds.) But as to this particular railroad and the bonds voted thereto, Congress validated said act and recognized said railroad company as a "legal and valid corporation." (That act is entitled "An act in relation to the Dakota Southern Railroad," and was approved May 27, 1872, and can be found in 17 U. S. Stats. at L., page 162; also on side pages 17 and 18 of said printed record; also in 101 U. S. Reports, page 129, case of First National Bank of Brunswick vs. The County of Yankton.)

Up to the time this validating act of Congress became a law, none of the bonds had been issued by Yankton County. The first \$100,000 of the bonds were issued on or after the 11th day of June, 1872, and after the county commissioners had found that the railroad company was under the agreement entitled to the same; and after the county had taken from the railroad company a \$400,000 bond conditioned as heretofore mentioned with approved sureties, and also secured by real-estate mortgage. (See side pages 30 to 34, inclusive, of said record.) The last \$100,000 of said bonds were issued on or after January, 1873. (See side page 35 of said record.)

It will be noticed that the county did not expect to receive any stock in exchange for these bonds at the time the vote was taken, but the act of Congress required the railroad company to issue stock to the county of the par value of the bonds received; and in pursuance of this requirement the railroad company did issue to the county \$200,000 in full-paid stock. (See side page 59 of said record.) And one of the county commissioners was elected a director of the railroad company by virtue of the stock held by the county, and attended meetings of the railroad company as such director. (See side pages 42 and 55 of said report.)

After the bonds were issued the board of county commissioners released the mortgage and canceled the bond given by the railroad company to secure a performance of the agreement on its part, with reference to the construction of said road, on the ground that the agreement had been fully complied with on the part of the railroad company. (See side pages 42 and 54 of said record.)

But when the railroad company were about to put a mortgage on the railroad, Yankton County, as the holder of the \$200,000 of stock in the company, filed a bill against the railroad company to interfere with this plan, and the railroad company, in this dilemma, with the prospect of bankruptcy before it if the litigation proceeded and this hindrance to the disposal of its mortgage bonds was not immediately removed, agreed to and did execute to Yankton County a bond in the penal sum of \$50,000 with approved securities, (who are to-day amply able to respond in damages for any breach of said bond,) conditioned that the railroad company would run a passenger train from Yankton to Sioux City every forenoon, returning every afternoon, and lying over at Yankton, and that it would keep and maintain its general offices at the city of Yankton, and would expend there the sum of \$50,000 in the erection of passenger and freight depots and machine shops. (See side pages 43 to 57, inclusive, of said record.)

It must be borne in mind that this agreement with reference to the manner of running trains and the expenditure of money in improvements at Yankton was a new agreement that was made and entered into in the fall of 1873, (the agreement is dated October 31, 1873,) and was in addition to the agreement under which the railroad was constructed and the bonds issued, and was extorted by said Yankton County from the railroad company through the instrumentality of the stock held by said Yankton County; and long before this litigation was started, which resulted in the making of said agreement, these bonds had all been issued and disposed of to innocent purchasers.

The bonds were taken by the firm of Wicker, Meckling & Co. from the railroad company, under their construction contract with the railroad company, at par, (see side page 59 of said record,) and Wicker, Meckling & Co. sold the bonds to W. N. Coler & Co., a firm of bankers and dealers in municipal bonds in New York City, for the sum of \$140,000 in cash, to wit: \$75,000 for the first \$100,000, and \$65,000 for the second \$100,000. (See side page 59 of said record.)

Subsequently W. N. Coler & Co. retailed the bonds out in small lots to the present holders at about ninety cents on the dollar.

In order to facilitate the sale of the bonds, W. N. Coler & Co. procured from nearly all the prominent officials and citizens of Yankton County letters and certificates stating that the bonds had been issued in good faith; that there were no safer investments in the market; that there was no disposition on the part of any portion of the people of the county to repudiate the bonds; that they had received what they paid for; that the citizens of the county were well satisfied, and that the county was abundantly able to pay the bonds, having no other indebtedness.

These letters and certificates were incorporated into a pamphlet by W. N. Coler & Co., and in this pamphlet Coler & Co. lay special stress upon the fact that these bonds had a very desirable feature, not common to ordinary municipal bonds, and that was this: that the act of the Territorial Legislature had been confirmed by a special act of Congress, thus, as they said, "effectually shutting out every question as to the authority of the county to issue the bonds, and any possibility of the county avoiding payment of the same." (A copy of these letters and certificates will be found attached to the protest introduced in the Senate by Senator HALE.)

The price these bonds were sold for in 1872 and the early part of 1873 of itself clearly shows the falsity of the statement now made, that the bondholders purchased the bonds as illegal securities, and demonstrates beyond all question that these bonds must have been considered a first-class investment, as other 8 per cent. western county bonds were not selling in the market at that time, to wit, 1872 and the early part of 1873, for as high a figure as these bonds brought. Indeed, up to the year 1876, when the county entered upon this scheme of repudiation, the interest upon these bonds had always been promptly paid, and the bonds had always been recognized as valid obligations, not only by the county, but also

by the Dakota Territory Legislature, as will be seen by reference to the act entitled "An act to authorize Yankton County to borrow money in certain cases." Approved December 21, 1872, found on page 130 of the Dakota Territorial session laws of 1872 and 1873; and also found on side page 57 of said printed record on file in the supreme court clerk's office.

No taxes have been levied for the purpose of paying interest on these bonds, and no interest has been paid upon them since the year 1876. In that year Hon. G. C. Moody (one of the parties who lately appeared before our committee to advocate the bill for the admission of the Territory as a State) filed a bill and obtained a decision from the Territorial courts that said bonds were illegal and void. Judge A. H. Barnes (who also lately appeared before our committee to advocate the bills for division and admission) was at that time one of the judges of the supreme court of the Territory, and he said at the conclusion of his opinion, holding these bonds invalid:

"I come to the conclusion that neither Congress nor the Territorial Legislature, nor both combined, could authorize or empower the county of Yankton to make a donation or subscription to the capital stock of a railroad." (See 1 Dakota Reports, page 267.)

Judge G. G. Bennett, (late Delegate to Congress from Dakota,) who also concurred with Judge Barnes in holding that the bonds were illegal and void, stated in his opinion, as an independent reason why the bonds should be held void, that the act of Congress required the railroad company to issue to, and impliedly required the town to accept, \$200,000 in stock of the railroad company, which was not bargained for by the county, and for this reason, if for no other, he held the bonds ought not to be paid, because the county thereby became subjected to the liability of a stockholder in the railroad company without the sanction and consent of its voters. (See pages 253 and 254 of 1 Dakota Reports.)

Since the delivery of these opinions by the Territorial judges the county of Yankton has realized the sum of \$16,666.66 from the sale of the stock received by it from the Southern Dakota Railroad Company, and the legal opinion of Judge Bennett is now considered hardly tenable.

The Supreme Court of the United States, as will be seen by reference to the decision in the Yankton County bond matter, (reported in 101 United States Reports, page 129,) did not agree with Judge Barnes as to the powers of Congress over the Territories of the United States. That court said in its opinion:

"All territory within the jurisdiction of the United States, not included in any State, must necessarily be governed by or under the authority of Congress. The Territories are but political subdivisions of the outlying dominion of the United States. Their relation to the General Government is much the same as that which counties bear to the respective States, and Congress may legislate for them as a State does for its municipal organizations."

"Congress may not only abrogate laws of the Territorial Legislatures, but it may itself legislate directly for the local government. It may make a void act of the Territorial Legislature valid and a valid act void. In other words it has full and complete legislative authority over the people of the Territories, and all the departments of the Territorial government. It may do for the Territories what the people under the Constitution of the United States may do for the States."

"No complaint is made of any irregularity in the proceedings under the law. The question in the case is one of power only, and we think the vote of the people of the county was validated by Congress, and express authority given to issue the bonds for the purpose originally intended. The only change which Congress saw fit to make was to require the company to give stock in return for the donation voted."

"The judgment of the supreme court of the Territory will be reversed, and the cause remanded with instructions to reverse the judgment of the district court, and direct a judgment for the plaintiff on the facts found, for such amount as shall appear to be due on the coupons sued for."

Such was the judgment of the tribunal of last resort under the Constitution, and an honest, law-abiding community should have received this decision as conclusive and proceeded to obey it. Not so with the defendants. Determined to avoid the payment of the bonds at all hazards, and in any event, the people of Yankton appealed to the Territorial Legislature to assist them in defeating the judgment of the Supreme Court of the United States, and accordingly the people of the entire Territory made themselves parties to the scheme of repudiation by first repealing the law authorizing a levy upon the property of the county for the payment of any judgment obtained against it. (See Session Laws of Dakota for 1881, page 63.)

Another act was also passed enabling the county commissioners to effect an immediate determination of their official powers by filing a resignation with the county clerk. (See Session Laws of Dakota for 1881, page 219.)

Another act was passed authorizing Yankton County to sell the \$200,000 of stock which it had received from the railroad company at the time said bonds were issued, and to enable the county to coerce the bondholders into a settlement at 50 cents on the dollar. The act further provided that the money obtained on said stock should be constituted a special fund to be used only in the payment of the indebtedness of Yankton County at the rate of 50 cents on the dollar. (See Session Laws of Dakota for 1881, page 305.)

As I have before stated, Yankton County did effect a sale of the stock for the sum of \$16,666.66, which was deposited with the county treasurer, and has remained in his hands for more than a year, drawing no interest because the county was unwilling to use the same in payment of this indebtedness, unless the bondholders would agree to compromise at 50 cents on the dollar.

Judgments having been rendered against the county in pursuance of the decision of the Supreme Court of the United States, there being no further defense available in law or in equity, the plaintiffs finally applied to the district court for writs of mandamus to compel the county commissioners to levy a tax for the payment of said judgments, and the county commissioners, or those within the jurisdiction of the court, availing themselves of the act of the Legislature passed for that purpose, heretofore referred to, immediately filed their resignations with the county clerk before the writs could be served upon them, and thus evaded the process of the court.

Subsequently, on Monday, the 5th day of September, 1881, when it became necessary for the county commissioners to levy a tax for ordinary county purposes, the remaining county commissioner, (who had not before resigned,) having come secretly within the jurisdiction of the court, met, with two new commissioners who were secretly appointed to fill the vacancies on the board, at about the hour of sunrise, and these three, after levying a tax for ordinary county purposes and transacting other ordinary business of the county, immediately resigned before the writs of mandamus could be served upon them.

In November last the action of the county commissioners was heartily indorsed by the people of Yankton in the re-election of the same persons to the offices of county commissioners, and finally, on the 28th of December, 1881, two of the commissioners so re-elected secretly qualified and held a secret meeting, at which they transacted the accumulated business of the county without taking any steps toward meeting the judgments rendered against the county, and then resigned, leaving the county practically disorganized, in which condition it has ever since remained.

In presenting the majority report the chairman of the committee used the following language:

"As to the protest which was referred to the committee, the majority of the committee are of the opinion that the case is one for the courts to settle rather than Congress. Indeed, they are so fully impressed with the belief that such matters

belong properly to the courts that they deem it impolitic if not unwise for Congress to legislate or express an opinion on the subject."

From this position of the majority of the committee I beg leave most earnestly to dissent. In the first place I deny that there is any question now before the courts as to the indebtedness of Yankton on the bonds voted by them to the Southern Dakota Railroad Company. The Supreme Court of the United States decided the question of power to issue the bonds against the county, and there being no other defense even pretended, final judgment was rendered against the county. The only question now pending is whether the defendants can nullify the judgment of the Supreme Court by means of the legislation enacted for that purpose by the Territorial Legislature of Dakota.

There are questions involved in the consideration of the pending measure far more important than the amount in dollars and cents honestly due to the holders of these bonds. The principles of good faith and fair-dealing apply to communities and commonwealths as well as to individuals, and while the man who repudiates his legal obligations and seeks by trickery to avoid them is justly refused the society and countenance of honest men, there is no reason why a community guilty of the same conduct should not be refused the highest privilege and greatest honor upon earth—membership of the American Union.

This is no case of repudiation by an isolated county or township. It is the case of an entire Territory, now aspiring to become a State, which has deliberately attempted to nullify and defeat the judgment of the highest judicial tribunal created by the Constitution.

To say that Congress can, upon the question of admitting this Territory as a State, ignore its illegal and outrageous defiance of the law, as declared by the Supreme Court of the United States, is to trample under foot the dictates alike of self-respect and constitutional requirement.

The admission of Dakota as a State upon the record and history presented is the endorsement by Congress of repudiation so shameless and unquestioned that it can find no plausible defense in this body, or even in the community where it was perpetrated.

For these reasons I dissent from the majority report, and am of the opinion that the pending measure for the admission of Dakota as a State should be rejected.

G. G. VEST.

Hennepin Canal.

SPEECH

OF

HON. CYRUS C. CARPENTER,
OF IOWA.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 25, 1882,

On the conference report on the river and harbor bill.

Mr. CARPENTER said:

Mr. SPEAKER: The purpose of the Senate amendment, comprising in part the conference report now under consideration, is to provide for the survey and a report upon the projected canal between the Mississippi River at Rock Island and the Illinois River at Hennepin. The proposed canal would be sixty-five miles long and would connect the waters of the Mississippi with those of the Illinois River, forming in connection with the Illinois and Michigan Canal a direct, available, and continuous through water-line between the Mississippi and the great lakes at Chicago; making the entire length of the connecting water-way one hundred and eighty miles.

It is objected to this project that it is not a national or interstate enterprise, and that canals are a thing of the past and are unavailable in the modern system of transportation.

I desire to state only two or three reasons which, in my judgment, show the fallacy of these objections.

As computed by the gentleman from Michigan [Mr. HORN] in his very able speech on the river and harbor bill, the Mississippi River and all its tributaries receive in this bill appropriations amounting to \$8,705,000, and the great lakes from Duluth to the Saint Lawrence River receive appropriations amounting to \$2,151,000.

Here are two great systems of water navigation upon which the Government, and wisely as I think, is expending annually millions of dollars; and yet there is no practicable, available, and direct water communication between these two great systems of water transportation.

This project contemplates the construction of a canal across an isthmus sixty-five miles in width at a cost of \$4,500,000, which Colonel Hodnett, a civil engineer who surveyed the proposed route, affirms "would be the cheapest canal ever constructed in the United States." This canal would afford a direct water communication between the great system of water-ways constituted of the Mississippi River and its tributaries and that of the great lakes, extending from Chicago to the markets of the East.

This enterprise will prove, in my judgment, of inestimable value to the States of the Northwest, and it will prove of equal value to the States of the Atlantic seaboard, where the surplus of the Northwest is consumed, and which furnish the iron, salt, hard coal, and other heavy and bulky products of the mine and factory consumed in the States west of the Mississippi. The river and harbor bill appropriates over \$4,000,000 for the improvement of the Lower Mississippi River, and contemplates the appropriation of many millions in addition to complete the elaborate designs of the Mississippi River commission. And to these expenditures we must add the \$5,000,000 expended on the jetties to secure an outlet into the Gulf of Mexico.

The expenditure of all these millions (and I do not say it in the way of criticism) is for the mere purpose of facilitating the carrying of the heavy surplus of the Mississippi Valley which seeks a foreign market. And yet the statistics of trade prove that while one-fourth of the surplus which the West sells goes abroad, the other three-fourths is sold and consumed in the cities, the mines, and the factories of our own States east of the Alleghany Mountains.

It seems strange to me that men will vote with complacent satisfaction to expend \$5,000,000 on the jetties at the mouth of the Mississippi, and over \$4,000,000 for other improvements of the river, to be followed by from \$25,000,000 to \$30,000,000 more in carrying out the projected improvements, and all this to facilitate the transportation of one-fourth the surplus products of the Mississippi Valley, while the same men will higgie and wriggle and question and cavil about the expenditure of \$4,500,000 to facilitate and cheapen the transportation of the other three-fourths to the home market east of the Alleghanies.

But it is said there is no warrant in the Constitution to enter upon this work, as it lies entirely within the border of a single State and is in no sense a national enterprise. I have already said cutting a ditch for sixty-five miles across a narrow isthmus connects in a direct way the great system of improvements in the Mississippi Valley with the commerce of the lakes and the Hudson River. We have cut a canal around the Muscle Shoals in Tennessee and the Des Moines Rapids in Iowa and the Sault Sainte Marie in Michigan, and have entered upon the construction of the reservoir system in Minnesota. If warrant was found for these improvements in the Constitution, I think we may find authority to construct a work like the Hennepin Canal, an enterprise so beneficent in its designs and which promises to be so far-reaching in its effects for good to the people of this whole continent.

In reply to the suggestion that canals are obsolete it is sufficient for me to say that Mr. Albert Fink, whose knowledge of railroad construction and operation is unsurpassed among the great men which railway enterprise has produced upon this continent, when before the Committee on Commerce frankly assigned as the great difference between railway freights on roads running parallel with water-ways and those running at right angles with the same water-ways, that it was largely and generally due to the effect of water competition. He also frankly admitted that the change in freight prices in summer and winter months, while in some measure affected by increased cost of operating railways in winter, was largely due to the absence of water competition in the winter months. In face of these facts it does not do to say that canal transportation in this faster commercial age is a thing of the past, and that the Hennepin Canal would not immensely profit both producer and consumer if constructed and in operation.

I now come to the main point which I intended to make on taking the floor. This is merely a provision appropriating money to survey and locate the Hennepin Canal. Even the enemies of the canal should concede this and support it. If, as they allege, the whole scheme will prove to be impracticable, then upon the report of a competent engineer to this effect agitation respecting the Hennepin Canal will cease. But if upon such survey the enterprise should seem practicable, its enemies should have the magnanimity to allow its friends "a day in court," when all the constitutional objections raised by them and all questions respecting the utility of the enterprise can be discussed, considered, and determined. This is all there is of the provision relative to the Hennepin Canal in this bill; and this is a small concession to those States west of the Mississippi River, whose Legislatures have memorialized Congress in its behalf, and whose people believe it will afford them relief in the means of transporting their surplus to the markets of the world.

General Subjects.

SPEECH

OF

HON. JAMES K. JONES,
OF ARKANSAS.

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 28, 1882,

On general subjects.

Mr. JONES, of Arkansas, said:

Mr. SPEAKER: On the 8th of June, 1878, Mr. KENNA, of West Virginia, in a speech in this House, made a succinct statement of the record of the Democratic and Republican parties on many of the financial and political questions occurring before that time. Following in the same line, I wish to bring up that statement to this date, and avoiding as far as possible all argument or illustration to present the facts simply as they have occurred and leave others to arrive at their own conclusion.

As the Greenback party, according to Mr. McPherson's very reliable Hand-Book of Politics, had fifteen members of the House of Representatives in the Forty-sixth Congress and as it has had nine members of this House up to the date of the admission of Mr. Lowe, and ten since that time, it is proper that the votes of that party shall also be given, as by their fruits we are to know them.

Much of the time and best thought of this House has been given to the examination and discussion of the tariff question, and just now the thinking people of the country are examining and considering this great question in a way that clearly indicates that we now see the "beginning of the end of this great iniquity;" that those who have had their hands upon the throats of those who eat their bread in the sweat of their faces will be forced to relax their hold. Hence I will begin what I now have to say by taking up the record upon this question.

On March 26, 1878, Mr. Wood moved that the bill reported from the Committee on Ways and Means entitled "An act to impose duties upon foreign imports, to promote trade and commerce, to reduce taxation, and for other purposes," be made the special order for Thursday, April 4, after the morning hour, and to continue from day to day until disposed of.

This motion was agreed to—yeas 137, nays 114. The yeas were—121 Democrats, 16 Republicans; the nays were—104 Republicans, 10 Democrats.

On June 5, the bill having been considered in the Committee of the Whole House, the question was, "Will the House agree to the recommendation of the Committee of the Whole that the enacting clause be struck out?" The yeas were 134, nays 120. Of the yeas 115 were Republicans and 19 Democrats; the nays were—113 Democrats and 7 Republicans. So the bill was defeated.

MILLS'S RESOLUTION.

December 1, 1877, Mr. MILLS moved to suspend the rules to submit the following:

Resolved, That the Committee on Ways and Means be instructed to revise the tariff so as to make it purely and solely a tariff for revenue and not for protecting one class of citizens by plundering another.

Which motion did not prevail—yeas 67, nays 76. The yeas were—60 Democrats and 7 Republicans; nays were—64 Republicans and 12 Democrats.

FREE QUININE.

June 30, 1879, Mr. Covert moved to suspend the rules and pass a bill to put quinine on the free list; which was carried—yeas 125, nays 33. The yeas were—96 Democrats, 22 Republicans, and 7 Greenbackers; nays were—31 Republicans, 2 Democrats, Greenbackers, not voting, 8.

FREE SALT.

January 12, 1880, Mr. HATCH moved to suspend the rules and pass a bill to provide for the free importation of salt; which motion was lost—yeas 115, nays 116. The yeas were—99 Democrats, 11 Republicans, and 5 Greenbackers; nays were—99 Republicans, 13 Democrats, and 4 Greenbackers.

On March 8 this bill was referred to the Committee on Ways and Means—yeas 129, nays 93. The yeas were—97 Republicans, 25 Democrats, and 7 Greenbackers. Nays were—84 Democrats, 2 Republicans, and 7 Greenbackers.

TARIFF REFORM.

March 8, 1880, Mr. Samford offered a bill to reduce the tariff on certain articles—50 per cent. on merchandise mainly made of hemp, metals, wood, wool, and cotton—and also one to repeal the tariff on printing-paper, type, and materials, &c., and moved their reference to the Committee on Revision of the Laws. A motion was made to refer them to the Committee on Ways and Means; which was agreed to—yeas 144, nays 87. The yeas were—102 Republicans, 34 Democrats, and 8 Greenbackers. The nays were—81 Democrats, 1 Republican, and 5 Greenbackers.

TOWNSHEND'S BILL.

March 22, 1880, Mr. TOWNSHEND, of Illinois, introduced a bill to so amend sections 2503, 2504, 2505 of the Revised Statutes of the United States as to make salt, printing-type, printing-paper, and chemicals and materials used in making paper, free and to place them on the free list; which was committed to the Committee on the Revision of the Laws.

On March 23, Mr. CONGER called attention to this, and claimed that the bill should go to the Committee on Ways and Means. Mr. Garfield moved to amend the Journal so as to send it to that committee.

Mr. Nichols moved to table that motion; which was carried—yeas 118, nays 117. The yeas were—110 Democrats, 3 Republicans, and 5 Greenbackers; nays were—100 Republicans, 12 Democrats, and 5 Greenbackers; 5 Greenbackers not voting.

This bill finally went to the Committee on Ways and Means, the motion being first to discharge the Committee on the Revision of the Laws from further consideration of the bill, which (March 25) was carried—yeas 143, nays 100. The yeas were—108 Republicans, 27 Democrats, and 8 Greenbackers; nays were—94 Democrats, 1 Republican, and 5 Greenbackers.

The vote occurring on the motion to refer to the Committee on Ways and Means, the yeas were 142, nays 90; as follows: yeas—105 Republicans, 30 Democrats, and 7 Greenbackers; nays—84 Democrats, 6 Greenbackers.

THE TARIFF COMMISSION.

March 20, 1882, Mr. KELLEY moved to suspend the rules and pass a resolution that when the House next went into Committee of the Whole House on the state of the Union the tariff-commission bill should be taken up—yeas 154, nays 58. The yeas were—113 Republicans, 36 Democrats, and 4 Greenbackers; nays were—55 Democrats, no Republicans, and 3 Greenbackers.

May 6, Mr. MILLS moved to recommit the bill to the Committee on Ways and Means with the following instructions:

First. That no more money shall be collected than is necessary for the wants of the Government, economically administered.

Second. That no duty be imposed on any article above the lowest rate that will yield the largest amount of revenue.

Third. That below such rate discrimination may be made, descending in the scale of duties, or for imperative reasons the articles may be placed on the list of those free from all duty.

Fourth. That the maximum revenue duty should be imposed on all luxuries.

Fifth. That all specific duties should be abolished and "ad valorem" duties substituted in their place, care being taken to guard against fraudulent invoices and undervaluation, and to assess the duty upon the actual market value.

Sixth. That the duty should be so imposed as to operate as equally as possible throughout the Union, discriminating neither for nor against any class or section.

Lost—yeas 75, nays 152. The yeas were—74 Democrats, no Republicans, and 1 Greenbacker; nays—124 Republicans, 22 Democrats, and 6 Greenbackers.

The bill then passed—yeas 151, nays 83. The yeas were—116 Republicans, 28 Democrats, and 7 Greenbackers; nays were—75 Democrats, 8 Republicans.

A number of advocates of tariff reform among the Democrats voted for this bill on the ground that any positive action on this great question must of necessity result in some degree of relief; that agitation and discussion must result in lightening the present tariff burdens.

Senate, May 9, bill passed—yeas 35, nays 19. The yeas were—28 Republicans, 6 Democrats, and 1 Independent; nays were—16 Democrats, 2 Republicans, and 1 Independent.

SENATE.

March 28, 1882, pending a bill to provide for a commission to consist of nine members from civil life to revise the tariff, Mr. VANCE moved to add a new section, as follows:

That in the selection of said commissioners the President shall give representation to each of the industries of agriculture and manufactures in proportion to the capital invested and the number of persons engaged therein.

Which was lost—yeas 22, nays 39. The yeas were—21 Democrats and 1 Republican; nays were—30 Republicans, 8 Democrats, and 1 Independent.

Mr. ALLISON moved to strike out of section 3 these words: "and the existing system of internal-revenue laws." Yeas—20 Republicans, 1 Democrat, and 1 Independent; nays—26 Democrats, and 10 Republicans.

Mr. MORGAN moved to insert in section 3, after the words "judicious tariff," the following:

For the purpose of raising revenue with incidental protection to American industry and American products.

Mr. HARRIS moved to amend the above by inserting after the words "judicious tariff" the following:

Based upon the principle of the lowest rate of duties that will when added to the revenue derived from internal taxes and other sources raise revenue sufficient for the legitimate and necessary purposes of the Government.

Which was lost—yeas 11, nays 41. The yeas were—10 Democrats, 1 Republican; nays were—26 Republicans, 13 Democrats, and 1 Independent.

Mr. MORGAN's amendment was then lost—yeas 15, nays 38. Yeas were—11 Democrats, 3 Republicans, and 1 Independent; nays were—24 Republicans and 12 Democrats.

Mr. GARLAND moved to strike from section 1 "nine members," and insert:

Three Senators, to be appointed by the Senate; three members of the House of Representatives, to be appointed by the Speaker of the House, and three others not members of either House, to be selected by and associated with them, with authority to determine the times and places of meeting, and to employ a stenographer, and to take evidence, and whose duty it shall be to take into consideration and to thoroughly investigate.

Lost—yeas 19, nays 34. Yeas were—16 Democrats, 1 Republican, and 1 Independent; nays—25 Republicans, 8 Democrats, and 1 Independent.

Mr. WILLIAMS moved to strike out all after the enacting clause and insert a provision for a commission, to be composed of four Senators and five members of the House; which was lost—yeas 15, nays 37. Yeas were—14 Democrats and 1 Republican; nays, 25 Republicans, 10 Democrats, and 2 Independents. The bill then passed—yeas 38, nays 15. Yeas were—26 Republicans, 11 Democrats, and 1 Independent; nays, 14 Democrats and 1 Independent. This bill was never taken up in the House.

TRACE CHAINS.

House, June 6, 1882, Mr. TURNER moved to suspend the rules and pass a bill to abolish the duty on trace chains; which was lost—yeas 73, nays 109. Yeas were—67 Democrats, 3 Republicans, and 3 Greenbackers; nays were—99 Republicans, 5 Democrats, and 5 Greenbackers.

INTERSTATE COMMERCE.

Forty-sixth Congress, February 2, 1881, Mr. REAGAN's interstate-commerce bill being the regular order, Mr. COX, of New York, raised

the question of consideration, and the House refused to consider the bill—yeas 98, nays 150. The yeas were—62 Democrats, 28 Republicans, and 8 Greenbackers; nays were—83 Republicans, 64 Democrats, and 3 Greenbackers; 4 Greenbackers not voting.

Forty-seventh Congress, June 5, 1882, Mr. REAGAN moved to suspend the rules and set December 12, 1882, for the consideration of his interstate-commerce bill, (H. R. No. 1655,) not to interfere with appropriation bills or bills raising revenue; which motion was not agreed to, two-thirds not voting in the affirmative. The yeas were 121, nays 78. The yeas were—81 Democrats, 33 Republicans, and 7 Greenbackers; nays were—67 Republicans and 11 Democrats.

On June 12, 1882, Mr. TOWNSEND reported a bill as a substitute for the above, which provided for a board of railroad commissioners, upon which there has been no action.

EXTENDING CHARTERS OF NATIONAL BANKS.

April 3, 1882, Mr. CRAPO moved to suspend the rules and make the bill (H. R. 4167) a special order for April 15; which motion was lost, two-thirds not voting therefor—yeas 122, nays 78. The yeas were—102 Republicans, 20 Democrats; nays were—70 Democrats, 1 Republican, and 7 Greenbackers; 2 Greenbackers not voting.

April 17, 1882, Mr. CRAPO moved to make same bill a special order for 25th of April; which was carried—yeas 149, nays 89. The yeas were—122 Republicans, 27 Democrats; nays were—80 Democrats and 9 Greenbackers.

A number of Democrats voting yea on this proposition claimed that while they opposed the present national-bank system they did so because they feared that unless some action was had with relation to the banks a great contraction of the paper currency would necessarily follow and a panic would be inevitable.

May 1, Mr. CRAPO moved to make same bill (H. R. No. 4167) a special order for May 9; which motion was adopted—yeas 150, nays 65. The yeas were—112 Republicans and 38 Democrats; nays were—57 Democrats, 1 Republican, and 7 Greenbackers.

May 12, this bill having been called up, Mr. RANDALL raised the question of consideration, on which the yeas were 116, nays 16; no quorum voting. The remainder of this day was spent in ineffectual efforts to secure a quorum. Subsequently the right to offer amendments and debate having been secured, the consideration of the special order was proceeded with.

March 17, Mr. MURCH moved to strike out twenty years as the term of extension and insert three years; which was lost—yeas 61, nays 117. The yeas were—52 Democrats, 2 Republicans, and 7 Greenbackers; the nays were—95 Republicans, 22 Democrats.

Mr. BUCKNER moved to strike out twenty years and insert ten years; which was lost—yeas 91, nays 116. The yeas were—73 Democrats, 12 Republicans, and 6 Greenbackers. The nays were—98 Republicans and 18 Democrats.

Mr. BLAND offered a substitute for the bill, which provided in effect for the issue by the Government of Treasury notes in all respects similar to the national-bank notes, and to be substituted for the national-bank currency; which was lost—yeas 71, nays 138. The yeas were—66 Democrats, 3 Republicans, and 2 Greenbackers; the nays were—114 Republicans, 19 Democrats, and 5 Greenbackers.

Mr. CANNON moved, as section 8:

That national banks now organized, or hereafter organized, having a capital of \$150,000 or less shall not be required to keep or deposit with the Treasurer of the United States bonds in excess of \$10,000 as security for their circulating notes, and such of those banks having on deposit bonds in excess of that amount are authorized to reduce their circulation by the deposit of lawful money as provided by law.

Which was adopted—yeas 102, nays 101. The yeas were—99 Republicans, 1 Democrat, and 2 Greenbackers; the nays were—86 Democrats, 11 Republicans, and 4 Greenbackers.

Mr. CANNON moved to reconsider this vote, and to table the motion to reconsider. Carried—yeas 111, nays 97. The yeas were—105 Republicans, 2 Democrats, and 4 Greenbackers; the nays were—87 Democrats, 7 Republicans, and 3 Greenbackers.

Mr. RANDALL offered the following as a new section to the bill:

SEC. —. That section 4 of the act of June 20, 1874, entitled "An act fixing the amount of United States notes, providing for a redistribution of the national-bank currency, and for other purposes," is hereby amended to the effect that national banks intending to withdraw the whole or any part of the bonds, interest upon which has not ceased, held by the Treasurer of the United States in trust to secure their circulating notes and to deposit lawful money in lieu thereof for the purpose of retiring or redeeming their circulation, shall be required in case of each separate intended withdrawal to give ninety days' notice of such intention in writing to the Secretary of the Treasury. And sections 5159 and 5160 of the Revised Statutes of the United States are hereby re-enacted.

Mr. CRAPO offered as a substitute for the above the following:

That any national banking association now organized or hereafter organized desiring to withdraw its circulating notes upon a deposit of lawful money of the United States as provided in section 4 of the act of June 20, 1874, entitled "An act fixing the amount of United States notes, providing for a redistribution of national-bank currency, and for other purposes," shall be required to give ninety days' notice to the Secretary of the Treasury of its intention to deposit lawful money and withdraw its circulating notes: *Provided*, That not more than \$5,000,000 of lawful money shall be deposited during any calendar month for this purpose: *And provided further*, That the provisions of this section shall not apply to bonds called for redemption, but when bonds are called for redemption the banks so holding such called bonds shall surrender them within thirty days after the maturity of their call.

Mr. RANDALL accepted the substitute.

Mr. CULBERSON moved to strike out "\$5,000,000 per month" and insert—

And no bank shall surrender for such purpose more than one-tenth of its circulation in any one year unless the bank surrenders its franchise or charter.

Which was lost; yeas—77 Democrats, 4 Republicans, and 7 Greenbackers; nays—105 Republicans, 11 Democrats.

Mr. JONES, of Arkansas, moved to strike out "\$5,000,000" and insert "\$3,000,000;" which was lost—yeas 92, nays 104. The yeas were—78 Democrats, 7 Republicans, and 7 Greenbackers; the nays were—94 Republicans and 10 Democrats.

Mr. BAYNE then offered an amendment to Mr. RANDALL's amendment as modified by Mr. CRAPO, as follows:

Provided, however, That said banks may withhold such bonds in whole or in part for one year upon notifying the Secretary of the Treasury of their intention so to do, in which event such bonds shall not be redeemable until the expiration of the year, nor shall they bear interest.

Which was lost—yeas 42, nays 163. The yeas were—36 Republicans and 6 Democrats; the nays were—86 Democrats, 75 Republicans, and 7 Greenbackers.

Mr. RANDALL's amendment then passed without a division.

Mr. CRAPO then moved as a new section:

That upon a deposit of bonds as described in sections 5159 and 5160, the association making the same shall be entitled to receive from the Comptroller of the Currency circulating notes of different denominations in blank, registered and countersigned as hereinafter provided, equal in amount to 90 per cent. of the current market value not exceeding par of the United States bonds so transferred and delivered, and at no time shall the total amount of such notes issued to any such association exceed 90 per cent. of the amount at such time actually paid in of its capital stock; and the provisions of sections 5171 and 5176 of the Revised Statutes are hereby repealed.

Mr. HOLMAN moved to strike out "5176;" which was lost—yeas 87, nays 108. Yeas were—73 Democrats, 6 Republicans, and 8 Greenbackers; nays were—101 Republicans and 7 Democrats.

The motion of Mr. CRAPO was then agreed to—yeas 109, nays 81. The yeas were—103 Republicans and 6 Democrats; nays were—71 Democrats, 3 Republicans, and 7 Greenbackers.

Mr. BUCKNER moved to so amend section 5191 as to require the banks in the large cities therein named to keep a reserve of 30 per cent. instead of 25, as now required, and also to require three-fifths of the reserve to be in specie, and also to forbid the counting of balances in the small cities as a part of the reserve; which was lost—yeas 57, nays 127. The yeas were—56 Democrats, 1 Republican; nays were—105 Republicans, 14 Democrats, and 8 Greenbackers.

Mr. T. M. RICE moved a new section providing that hereafter all redemption of national-bank notes be made in a new issue of legal-tender notes to be issued in excess of the present legal-tenders and equal in amount to the national-bank circulation; which failed—yeas 44, nays 147. The yeas were—34 Democrats, 2 Republicans, and 8 Greenbackers; nays were—104 Republicans and 43 Democrats.

The bill was then passed—yeas 125, nays 67. The yeas were—103 Republicans, 22 Democrats; nays were—57 Democrats, 2 Republicans, 8 Greenbackers.

This bill being under consideration in the Senate June 16, the following amendment was offered:

And provided further, That no attachment or execution shall be issued against such national banking association or its property before final judgment in any suit, action, or proceeding in any State, county, or municipal court.

Which was lost—yeas 24, nays 27. The yeas were—22 Republicans, 2 Independents; nays were—24 Democrats and 3 Republicans.

Mr. BECK offered an amendment providing that national banks shall receive silver certificates and pay them out upon the same terms as gold, and that if any officers of any bank engage directly or indirectly in making any discrimination in favor of gold over other issues of money, then the bank charter shall be forfeited; which was not adopted—yeas 20, nays 29. The yeas were—20 Democrats; the nays were—23 Republicans and 1 Independent.

Mr. MORGAN offered an amendment, to compel national banks to receive all legal-tender coin and certificates, and pay them out or forfeit their charters; which failed to pass—yeas 17, nays 28. The yeas were—16 Democrats and 1 Republican; the nays were—25 Republicans, 1 Democrat, and 2 Independents. The bill then passed the Senate with some verbal amendments.

Bill passed the House July 10—yeas 110, nays 79. The yeas were—99 Republicans and 11 Democrats; nays were—70 Democrats, 3 Republicans, and 6 Greenbackers.

INTERNAL REVENUE.

June 6, 1878, Mr. Covert moved a new section to the then pending internal-revenue bill, which reduced the tax on tobacco to 20 cents per pound; tax on cigars to \$5 per thousand; on cigarettes weighing not exceeding $3\frac{1}{2}$ pounds per thousand, \$1.25 per thousand.

Mr. TUCKER moved to make the tax 16 cents per pound; which was carried—yeas 126, nays 80. The yeas were—108 Democrats and 18 Republicans; the nays were—73 Republicans and 7 Democrats. The amendment as amended was agreed to—yeas 137, nays 103. The yeas were—120 Democrats and 17 Republicans; nays—92 Republicans and 11 Democrats.

Forty-seventh Congress, June 27, 1882, the House had under consideration the bill (H. R. 5538) "to reduce internal taxation" by repealing the stamp tax on bank checks, drafts, orders, and vouchers; the tax on the capital and deposits under section 3408, Revised Statutes; the tax on capital and deposits of national banks, matches, perfumery, medicinal preparations, &c., all of which, according to Mr. KELLEY, yield a revenue of \$16,892,880; of which \$11,387,797 is derived from the tax on capital and deposits of banks and stamp checks, \$3,278,580 from tax on matches, and \$2,226,503 from proprietary medicines.

June 28, Mr. SPRINGER moved to recommit the bill, with instructions to report a bill repealing all internal taxation except section 3413 of the Revised Statutes of the United States and amendments thereto, and except distilled spirits, &c.; which was lost. The yeas were 56, nays 125. Yeas—55 Democrats, Republicans 0, Greenbackers 1; nays—Republicans 112, Democrats 13, Greenbackers 0. The bill then passed—yeas 127, nays 79. The yeas were—105 Republicans, 22 Democrats, Greenbackers 0; nays—65 Democrats, 10 Republicans, 4 Greenbackers; 5 Greenbackers not voting.

SENATE.

Senate committee reported the bill with amendments to reduce the tariff on sugar to 25 per cent., on steel rails to \$20 per ton, and to raise the tariff on articles made of hoop-iron, (cotton-ties, &c.) July 19, Mr. BECK offered to amend the committee's amendment by fixing the tax on manufactured tobacco at 12 cents per pound, which was adopted—yeas 29, nays 26. The yeas were—27 Democrats, 2 Republicans; nays—24 Republicans, 2 Independents.

Mr. GEORGE moved to limit the repeal of the stamp tax on checks, &c., to amounts under \$100. Rejected—yeas 19, nays 39. The yeas were—19 Democrats; nays were—23 Republicans, 5 Democrats, 2 Independents.

Mr. GEORGE moved to strike out "and on capital and deposits of banks and bankers, except such taxes as are now due and payable, and on and after the 1st day of October, 1882, the stamp tax on bank checks, drafts, orders, and vouchers;" which was lost—yeas 15, nays 41. The yeas were—15 Democrats; nays were—32 Republicans, 8 Democrats, and 2 Independents.

Mr. SAULSBURY moved to strike out the words "and deposits." Lost—yeas 5, nays 45. The yeas were—5 Democrats; nays were—31 Republicans, 12 Democrats, 2 Independents.

The amendment of the committee, as amended on motion of Mr. BECK, was then adopted—yeas 39, nays 10. The yeas were—26 Republicans, 11 Democrats, 2 Independents; nays were—9 Democrats, 1 Republican.

Mr. BAYARD moved to strike "matches" from the repealing clause of the bill. Rejected—yeas 8, nays 44. The yeas were—8 Democrats; nays were—28 Republicans, 14 Democrats, 2 Independents.

Mr. BECK moved to strike from the repealing clause "perfumery, medicinal preparations, and other articles." Lost—yeas 26, nays 29. The yeas were—26 Democrats; nays—27 Republicans, 2 Independents.

Mr. VANCE moved to except "playing-cards" after the words "Schedule A;" so as to retain the stamp tax on playing-cards. Lost—yeas 28, nays 28. The yeas were—28 Democrats; nays—27 Republicans, 1 Independent.

Mr. VEST moved to add to section 2 a proviso that farmers could sell their own tobacco, grown by themselves or paid them as rent, but not to peddle it. Lost—yeas 23, nays 28. The yeas were—23 Democrats; nays—27 Republicans, 1 Democrat.

Mr. BECK moved to strike out the section and insert "from and after the 1st day of May, 1883, all dealers in leaf tobacco or manufactured tobacco, and all manufacturers of tobacco and cigars, and all retail dealers in leaf tobacco, and all peddlers of every class shall pay a tax of \$2 each per annum." Lost—yeas 20, nays 31. The yeas were—20 Democrats; the nays were—27 Republicans, 2 Democrats, 2 Independents.

Mr. HARRIS moved to amend the last sentence of section 2, making it read: "Retail dealers in leaf tobacco shall pay \$10 per annum." Lost—yeas 21, nays 26. The yeas were—21 Democrats; the nays—24 Republicans, 1 Democrat, 1 Independent.

Mr. BECK moved to add the following to section 2:

Provided, That farmers and producers of tobacco may sell at the place of production tobacco of their own growth and raising, at retail, directly to the consumer, to an amount not exceeding \$100 annually.

Passed—yeas 24, nays 23. The yeas were—23 Democrats, 1 Independent; nays—22 Republicans, 1 Democrat.

July 24, Mr. MAHONE moved to add, after the word "thousand," in line 10 of section 3, a provision for a tax of 8 cents per pound on all tobacco, snuff, &c., prepared for sale and consumption in any manner; which was lost—yeas 18, nays 38. The yeas were—17 Democrats, 1 Independent; nays were—28 Republicans, 9 Democrats, 1 Independent.

On motion of Mr. MAHONE, a provision for a rebate for the full amount of the reduction in favor of parties having taxed stocks on hand unsold was passed—yeas 27, nays 25. The yeas were—16 Democrats, 9 Republicans, and 2 Independents; the nays were—19 Republicans, 6 Democrats.

APPORTIONMENT.

March 3, 1881, pending a bill to fix the number of members of the House under the census of 1880, 322 was proposed as the number. This was considered favorable to the Republican side of the House, and was lost—yeas 119, nays 132. The yeas were—110 Republicans, 3 Democrats, and 6 Greenbackers; the nays were—127 Democrats, 1 Republican, and 4 Greenbackers; 5 Greenbackers not voting.

The vote to adopt 319, which was also considered favorable to the Republican side, was—yeas 137, nays 123. The yeas were—116 Republicans, 10 Democrats, and 11 Greenbackers; nays were—120 Democrats, 1 Republican, and 2 Greenbackers.

Upon the passage of the bill the yeas were 145, nays 113. The

yeas were—114 Republicans, 18 Democrats, and 13 Greenbackers; nays were 113 Democrats.

Forty-seventh Congress, pending the proposition to fix the number of members at 320, Mr. ANDERSON moved to make it 325; which was adopted—yeas 162, nays 104. The yeas were—136 Republicans, 20 Democrats, and 6 Greenbackers; nays were—100 Democrats, 1 Republican, and 3 Greenbackers.

Mr. BELTZHOVER offered the following:

It shall be unlawful to divide any county or parish in the formation of any district which shall consist of more than one county or parish, and in all districts consisting of more than one county or parish the counties or parishes which are most nearly contiguous to each other and which have the number of inhabitants nearest to the ratio fixed by law shall be made a representative district.

Which was defeated—yeas 116, nays 135. The yeas were—109 Democrats, 2 Republicans, and 5 Greenbackers; nays were—129 Republicans, 3 Democrats, and 3 Greenbackers.

Mr. COLERICK offered a substitute fixing the number at 316, a number more favorable to the Democrats; which did not pass—yeas 94, nays 154. The yeas were—94 Democrats; the nays were—128 Republicans, 20 Democrats, and 6 Greenbackers.

Mr. COLERICK moved to reconsider; which was lost—yeas 103, nays 142. The yeas were—99 Democrats and 4 Greenbackers; nays—124 Republicans, 14 Democrats, 4 Greenbackers.

REFUNDING.

1881, Mr. Wood reported a bill to authorize the issue of \$400,000,000 of 3 per cent. bonds, payable at the pleasure of the United States after five years and payable in ten years, and \$300,000,000 certificates in tens, twenties, and fifties bearing interest at 3 per cent. and redeemable at the pleasure of the United States after one year and payable in ten, and providing that the public debt should not be increased; these to be issued for bonds bearing a higher rate of interest; that after May 1, 1881, these bonds alone would be received from banks to secure circulation or as security for deposits; which was passed—yeas 135, nays 125. The yeas were—124 Democrats, 9 Republicans, and 2 Greenbackers; nays—104 Republicans, 10 Democrats, 11 Greenbackers.

An effort to amend in the Senate by making the rate of interest 3½ per cent. failed—yeas 21, nays 34. The yeas were—17 Republicans, 4 Democrats, and 1 Independent; nays were—29 Democrats and 5 Republicans. The Senate then passed the bill—yeas 43, nays 20. The yeas were—39 Democrats, 3 Republicans, and 1 Independent; nays were—20 Republicans.

Upon the return of the bill to the House the vote was—yeas 121, nays 91. The yeas were—113 Democrats, 5 Republicans, and 3 Greenbackers; nays were—86 Republicans and 7 Greenbackers; 5 Greenbackers not voting.

DEPUTY MARSHALS AT THE POLLS.

June 10, 1879, the bill to make appropriations for certain judicial expenses, providing that no part of the appropriations should go to the salaries, compensation, fees, or expenses, under title 26 of the Revised Statutes, passed—yeas 102, nays 84. The yeas were—100 Democrats and 2 Greenbackers; nays—84 Republicans; 13 Greenbackers not voting.

June 16, Senate amended and passed this bill—yeas 27, nays 15. The yeas were—26 Democrats and 1 Independent; nays, 15 Republicans.

June 18, House concurred in second and third amendments and non-concurred in first—yeas 102, nays 81. The yeas were—100 Democrats, 2 Greenbackers; nays were—80 Republicans; 13 Greenbackers not voting.

Senate concurred, and June 23 the bill was vetoed.

The question coming up on the same day the yeas were 102, nays 78—not two-thirds. The yeas were—101 Democrats, and 1 Greenbacker; nays were—78 Republicans; 14 Greenbackers not voting.

June 26, Mr. COBB reported a bill from the Committee on Appropriations (H. R. No. 2382) making appropriations to pay United States marshals and their general deputies. This bill also provided that no part of the money was to be paid out under title 26 of the Revised Statutes, which relates to deputy marshals, &c., at the polls. This bill passed—yeas 90, nays 69.

The yeas were—88 Democrats and 2 Greenbackers; nays were—69 Republicans; 13 Greenbackers not voting.

Senate, June 28, efforts to amend having failed the bill passed—yeas 26, nays 15. Yeas, 26 Democrats; nays, 15 Republicans.

June 30, this bill was vetoed, and on the same day the vote in the House stood—yeas 85, nays 63; not two-thirds. The yeas were—84 Democrats, 1 Greenbacker; the nays—63 Republicans; 14 Greenbackers not voting.

CHINESE QUESTION.

January 14, 1879, Mr. WILLIS reported a bill providing in substance that no ship should be allowed to bring more than fifteen Chinese passengers, upon which, on January 29, a vote was had—yeas 155, nays 72. The yeas were—104 Democrats, 51 Republicans; nays were—56 Republicans and 16 Democrats.

February 14, 1879, this bill passed the Senate with some verbal amendments—yeas 39, nays 27. The yeas were—21 Democrats, 18 Republicans; nays—17 Republicans, 9 Democrats, and 1 Independent.

February 22 the House concurred.

March 1 the bill was vetoed. After the veto the vote in the House was—yeas 110, nays 96. The yeas were—89 Democrats and 21 Republicans; nays—81 Republicans and 15 Democrats.

Forty-seventh Congress, January 26, 1882, a bill to suspend the importation of Chinese for twenty years was introduced in the Senate by Mr. MILLER, (S. 71.)

March 8, Mr. INGALLS moved to strike out "twenty" and insert "ten;" which was lost—yeas 23, nays 23.

The yeas were—18 Republicans, 4 Democrats, and 1 Independent; nays—17 Democrats and 6 Republicans.

Mr. HOAR moved a proviso that this shall not apply to skilled laborers who came to work on their own account; their labor not being the property of another person. Lost—yeas 17, nays 27. The yeas were—14 Republicans, 1 Democrat, and 2 Independents; nays were—21 Democrats and 6 Republicans.

Mr. HOAR moved an amendment similar to the preceding. Lost—yeas 19, nays 24. The yeas were—15 Republicans, 2 Democrats, and 2 Independents; nays—20 Democrats and 4 Republicans.

May 9, Mr. FARLEY moved to amend by forbidding courts to naturalize Chinese hereafter—yeas 26, nays 22. The yeas were—22 Democrats, 4 Republicans; nays—20 Republicans, 1 Democrat, and 1 Independent.

Mr. GROVER moved to amend by declaring the words "Chinese laborers" to mean skilled, unskilled, and miners—yeas 25, nays 22. The yeas were—22 Democrats and 3 Republicans; nays—20 Republicans, 1 Democrat, and 1 Independent.

Mr. INGALLS moved to make the period ten instead of twenty years and the act to begin ninety days instead of sixty after passage. Lost—yeas 20, nays 21. The yeas were—17 Republicans, 1 Democrat, and 2 Independents; nays—17 Democrats and 4 Republicans. The bill as amended then passed—yeas 29, nays 15. The yeas were—21 Democrats and 8 Republicans; nays—13 Republicans, 1 Democrat, and 1 Independent.

HOUSE.

House of Representatives, March 23, Mr. KASSON moved to strike out "twenty" and insert "ten"—yeas 100, nays 131. The yeas were—94 Republicans, 3 Democrats, and 3 Greenbackers; the nays were—96 Democrats, 30 Republicans, 5 Greenbackers. The bill then passed—167 to 66. The yeas were—99 Democrats, 60 Republicans, 8 Greenbackers; nays—62 Republicans, 4 Democrats.

April 4, the bill was vetoed.

Senate, April 5, Mr. SHERMAN moved to refer the bill, message, and accompanying papers to the Committee on Foreign Relations; which was lost—yeas 18, nays 32. The yeas were—18 Republicans; the nays were—24 Democrats, 7 Republicans, and 1 Independent.

The vote upon the passage of the bill over the veto in the Senate was—yeas 29, nays 21; not two-thirds. The yeas were—23 Democrats and 6 Republicans; the nays were—20 Republicans and 1 Independent.

So the bill was lost.

THE NEW BILL.

April 17, 1882, Mr. PAGE, of the House, moved to suspend the rules and pass a bill for the suspension of the importation of Chinese for ten years; which was adopted—yeas 202, nays 37. The yeas were—104 Democrats, 90 Republicans, and 8 Greenbackers; nays were—34 Republicans and 3 Democrats.

In the Senate, April 25, on motion to strike out the section forbidding the naturalization of Chinese, yeas were 26, nays 32. The yeas were—25 Republicans and 1 Independent; nays were—27 Democrats and 5 Republicans.

A motion to amend by striking out the words "that the words 'Chinese laborers,' wherever used in this act shall be construed to mean both skilled and unskilled laborers and Chinese employed in mining," was carried—yeas 29, nays 28. The yeas were—28 Republicans, 1 Independent; the nays were—26 Democrats, 2 Republicans.

The above vote was in the Senate as in Committee of the Whole, and on April 28 the Senate rejected the above amendment—yeas 20, nays 25. The yeas were—19 Republicans, 1 Independent; the nays were—22 Democrats, 3 Republicans. This vote retained the original section.

Mr. EDMUNDS moved to amend section 15 by striking out all after the word "that," and inserting:

The words Chinese laborers wherever used in this act shall be construed to mean persons usually engaged in manual labor.

Lost—yeas 17, nays 25. The yeas were—16 Republicans, 1 Independent; the nays were—21 Democrats, 4 Republicans.

Mr. EDMUNDS moved to amend section 14 by striking out all after the word "that" and inserting, "nothing in this act shall be construed to change the existing naturalization laws so as to admit Chinese persons to citizenship. Lost—yeas 16, nays 25. The yeas were—15 Republicans, 1 Independent; the nays were—21 Democrats, 4 Republicans. The bill then passed—yeas 32, nays 15. The yeas were—22 Democrats, 9 Republicans, and 1 Independent; the nays were—15 Republicans.

In the House of Representatives, May 2, the bill passed without division.

GREENBACKS FOR CUSTOMS DUTIES.

January 21, 1878, Mr. Southard moved to suspend the rules and pass a bill to make greenbacks receivable for customs duties after

January 1, 1879. Lost—154 yeas, 96 nays; not two-thirds. The yeas were—111 Democrats, 43 Republicans; nays—73 Republicans, 23 Democrats.

January 15, 1879, Mr. Wood reported a bill to make greenbacks receivable for duties on imports.

Mr. Garfield moved to amend by inserting "so long as said notes shall be exchangeable at par in coin." Lost—yeas 77, nays 122. The yeas were—66 Republicans, 11 Democrats; the nays were—93 Democrats, 29 Republicans. Mr. Garfield then moved to table the bill. Lost—yeas 41, nays 155. The bill then passed—yeas 155, nays 43. The yeas were—91 Democrats, 64 Republicans; the nays were—32 Republicans, 11 Democrats. No action was had in the Senate upon this bill.

INTERCHANGE OF GOLD AND SILVER.

February 3, 1879, Mr. WHITTHORNE moved to pass a bill providing for the interchange of gold and silver at the mints, and to forbid any discrimination for or against gold or silver. Lost—yeas 101, nays 136. The yeas were—86 Democrats, 15 Republicans; the nays were—100 Republicans, 36 Democrats.

May 12, 1879, Mr. DIBRELL moved to suspend the rules and pass a bill to restore the income tax. Lost—yeas 111, nays 94. The yeas were—97 Democrats, 5 Republicans, 10 Greenbackers; nays were—83 Republicans, 10 Democrats, and 1 Greenbacker.

WEAVER RESOLUTIONS.

April 5, 1880, Mr. Weaver moved to suspend the rules and pass the following:

Resolved, That it is the sense of this House that all currency, whether metallic or paper, necessary for the use and convenience of the people should be issued and its volume controlled by the Government and not by or through the bank corporations of the country; and when so issued should be a full legal tender in payment of all debts, public and private.

Resolved, That in the judgment of this House that portion of the interest-bearing debt of the United States which shall become redeemable in 1891, or prior thereto, being in amount about \$782,000,000, should not be refunded beyond the power of the Government to call in said obligations and pay them at any time, but should be paid as rapidly as possible, according to contract. To enable the Government to meet these obligations the mints of the United States should be operated to their full capacity in the coinage of standard silver dollars and such other coinage as the business interests of the country may require.

Lost—yeas 85, nays 117. The yeas were—72 Democrats, 1 Republican, 12 Greenbackers; nays were—87 Republicans, 29 Democrats, and 1 Greenbacker.

Yet the first national convention of the Greenback party held at Indianapolis, Indiana, May 18, 1876, in announcing its principles to the country adopted as the second and principal section of its platform the following:

Second. We believe that a United States note, issued directly by the Government and convertible on demand into United States obligations bearing a rate of interest not exceeding one cent a day on each \$100 and exchangeable for United States notes at par, will afford the best circulating medium ever devised. Such United States notes should be full legal-tenders for all purposes except for the payment of such obligations as are by existing contracts especially made payable in coin, and we hold that it is the duty of the Government to provide such circulating medium and insist, in the language of Thomas Jefferson, that "bank paper must be suppressed and the circulation restored to the nation, to whom it belongs."

Which means, if language adopted by a national Greenback convention is intended to mean anything, that a system involving a perpetual national debt and the absolute and entire control of the volume of paper money by the money-owners of the country and not by the Government is the best financial system "ever devised" in the opinion of the Greenback party.

CIVIL-SERVICE REFORM.

December 16, 1878, Mr. Chalmers moved to suspend the rules and pass a bill to prevent officers of the Government from intermeddling in elections by threats and menaces, or contributions of money, or the use of official privilege; which was lost—yeas 132, nays 102; not two-thirds. The yeas were—126 Democrats, 4 Republicans, 2 Greenbackers; nays—102 Republicans; 13 Greenbackers not voting.

1882, on the adoption of a new rule, clause 8, Rule XVI, which enabled a bare majority to override all rights of a minority, and was especially to seat certain partisan contestants, there were—yeas 150, nays 2. The yeas were—144 Republicans, Greenbackers 6; nays were—2 Democrats. The Democrats refrained from voting to defeat action, if possible, for want of a quorum, this being absolutely their only hope under the circumstances.

CONTESTS—LYNCH VS. CHALMERS.

The vote to unseat Chalmers was—yeas 125, nays 95. The yeas were—120 Republicans, 5 Greenbackers; nays were—93 Democrats, 2 Greenbackers.

In this case a Mississippi election law, which had been construed by the supreme court of that State, was disregarded by the House.

MACKEY VS. DIBBLE.

Resistance was made in this case by the Democrats on the ground that Hogarth, the stenographer employed to take all the evidence in this case, after writing out the testimony delivered to Mackey, the contestant, the evidence taken on his part; that he (Mackey) interlined and otherwise altered the same in material points, and as altered had it copied by Smith, and that Hogarth afterward signed without reading or comparing it with the original; that an attempt

was made to verify this evidence by affidavits taken without notice to contestee, the originals having been destroyed. Democrats tried to defeat it quorum. The vote in this case was—yeas 147, nays 3. The yeas were—141 Republicans and 6 Greenbackers; nays were—3 Democrats. The quorum was 146.

In the contest of *Bisbee vs. Finley* the vote was—yeas 141, nays 9. The yeas were—141 Republicans; the nays were—2 Democrats, 2 Independents, and 5 Greenbackers.

Lowe vs. Wheeler—yeas 148, nays 3. The yeas were—142 Republicans, 6 Greenbackers; the nays were—3 Democrats.

SMALLS VS. TILLMAN.

The question being divided upon the first proposition, that Tillman was not elected, the yeas were 144, nay 1. The yeas were—140 Republicans, 4 Greenbackers; nay, 1 Democrat. On the proposition that Smalls was elected the yeas were 141, nays 4. The yeas were—139 Republicans, 2 Greenbackers; nays—1 Democrat, 3 Greenbackers.

SMITH VS. SHELLEY.

The previous question was moved by Mr. CALKINS. The yeas were 143, nays 1. No quorum. The yeas were—138 Republicans and 5 Greenbackers; nay, 1 Democrat.

Afterward the previous question was ordered. On the vote to unseat Shelley the yeas were 145, nay 1. The yeas were—140 Republicans, 5 Greenbackers; nay—1 Democrat.

In all these cases, except the first, a negative vote had the same practical effect as an affirmative vote, the efforts of the minority being to break a quorum.

KNIT GOODS.

June 6, Mr. KELLEY reported back from Committee on Ways and Means "a bill (H. R. No. 3570) to correct an error in section 2404 of the Revised Statutes." The "correction" proposed raised the tariff on woolen knit goods from 35 per cent. to 85 to 100 per cent.

July 3, Mr. KELLEY moved to suspend the rules and pass the bill.

Mr. MORRISON and Mr. CARLISLE opposed the passage of the bill, and denied that there was any error in the revision. The vote being taken, the bill was passed—yeas 134, nays 49. Of the yeas were—108 Republicans, 22 Democrats, and 4 Greenbackers. The nays were—46 Democrats, 2 Republicans, and 1 Greenbacker; 5 Greenbackers not voting.

ELECTION OF OFFICERS.

December 6, 1881, Mr. ROBESON offered the following:

Resolved, That George W. Hooker, of the State of Vermont, be, and he is hereby, elected Sergeant-at-Arms of the House of Representatives of the Forty-seventh Congress; that Walter P. Brownlow, of the State of Tennessee, be, and he is hereby, elected Doorkeeper of the House of Representatives of the Forty-seventh Congress; that Henry Sherwood, of the State of Michigan, be, and he is hereby, elected Postmaster of the House of Representatives of the Forty-seventh Congress; and that Rev. Fred D. Power, of the State of Virginia, be, and he is hereby, elected Chaplain of the House of Representatives of the Forty-seventh Congress.

Mr. HOUSE moved to amend by striking out the name of "George W. Hooker" and inserting "John G. Thompson;" to strike out "Walter P. Brownlow" and insert "C. W. Field;" to strike out "Henry Sherwood" and insert "A. W. C. Nowlin." Subsequently a vote was taken on the motion of Mr. HOUSE, which was lost—yeas 122, nays 157. The yeas were—121 Democrats, 1 Greenbacker. The nays were—147 Republicans, 2 Readjusters, 8 Greenbackers.

The point in this vote was that it was a simple choice between the old Democratic officers and the proposed Republican nominees, all the Greenbackers except one voting for the Republicans, and that one, SOLON CHACE, with "them steers" is now trying to "plow under."

GENERAL J. B. WEAVER'S RECORD.

The following I find in a speech of Hon. R. P. BLAND, delivered in the State of Missouri in 1880:

General Weaver, in a speech in the House of Representatives on April 5, 1880, said: "We do not seek to compel the bondholder to receive the greenback in payment of his bond. The people once had the right so to pay them, but that right was ruthlessly taken away by a change of contract in 1869, which took from the toiling tax-payers six hundred millions, more than half of which went to enrich foreign bondholders and usurers." The Democratic platform of 1868 declared the United States bonds payable in lawful money. The Republican party platform in 1868 declared the debt a loyal debt, and payable in coin. On this issue was Grant elected President; and one of the first acts that Grant signed as President was the act mentioned by General Weaver as carrying out the pledges of the Republican party. Now, my friends, where was he who is now your candidate for President then? Where was he? At that time he was a Federal office-holder in Iowa, a Republican United States assessor for a district in Iowa from 1867 till 1873. He supported Grant in his first administration; he supported Grant in his second administration; he voted for Hayes, and in 1872 he was a Republican candidate for Congress in Iowa, and defeated by Judge Lockridge.

In 1874 he was again a Republican candidate and defeated in convention by Judge Sampson. In 1877 he was a Republican candidate for governor of Iowa and was defeated by Senator Kirkwood. He was a Republican till 1878 when he left that party and joined the Greenback party and was elected to Congress. Now, my friends, look at his record. He declared in his platform in 1868 that the debt was a loyal one and payable in coin and he supported the Republican party in declaring it payable in coin.

And in the change of contract he supported the Republican party in all their legislation from 1868 till 1877. During this time all the legislation that was vicious in currency legislation was done, and General Weaver supported his Republican party. During all this time did he by his influence, his voice, and in his speeches and his acts support and maintain this legislation foisted upon the country and hung to his party and defended it till 1878, two years ago. After having accomplished all this stealing, as he calls it, of \$600,000,000 from the people of this country, after having helped filch that amount of money—and I say it is true—from this toiling millions of this nation, he pretends to be a repentant sinner in 1878, and joins the Greenback party.

As a further indication of the "affinities" of the Greenbackers, I subjoin the following, extracted from the prospectus of the National Republican, a stalwart Republican paper published in this city. I take this extract from the weekly issue of that paper, dated June 15, 1882:

The Daily National Republican is one of the best newspapers published in the country. It contains all the news, local, general, and political. It is sent by mail, postage paid, at the low price of \$6 per year, or less time at fifty cents per month, invariably in advance.

Address

NATIONAL REPUBLICAN.

Washington, D. C.

Hallet Kilbourn, Manager.

UNITED STATES HOUSE OF REPRESENTATIVES.

Washington, D. C., January 4, 1882.

To the anti-Bourbon voters of the Southern States:

The undersigned, members of Congress from Southern States, desirous of promoting the union and cordial co-operation of all the anti-Bourbon elements in our section in the good work of breaking up what has been a solid Bourbon South, heartily recommend that our constituents and friends do all in their power to extend the circulation of the Weekly National Republican.

Its political editor, George C. Gorham, has shown such power and judgment in his advocacy of liberalism in Virginia that we want the benefit of his work in other Southern States. He has the true idea of the political situation at the South, and we are confident that his liberal counsels will do great good in producing good understandings between the Northern and Southern people and friends of the Administration.

We hope to see The National Republican widely circulated throughout the entire South.

L. C. HOUK, Second District, Tennessee.

A. H. PETTIBONE, First District, Tennessee.

WM. R. MOORE, Tenth District, Tennessee.

JOHN PAUL, Seventh District, Virginia.

R. T. VAN HORN, Eighth District, Missouri.

O. HUBBS, Second District, North Carolina.

NICHOLAS FORD, Ninth District, Missouri.

JOHN F. DEZENDORF, Second District, Virginia.

JOSEPH JORGENSEN, Fourth District, Virginia.

M. G. URNER, Sixth District, Maryland.

PETERSBURGH, VA., January 4, 1882.

DEAR MR. KILBOURN: It gives me pleasure to commend the National Republican, so well and ably edited, to the earnest friendship of those who would uphold the Constitution and the laws, discourage sectional lines and class legislation, foster public education, and respect the rights and care for the proper interests of all the people of a common country.

Yours, truly,

WILLIAM MAHONE.

The Weekly National Republican is just what is needed in the South. Independent Democrats who refuse to act with the Bourbon organization will find it, as the Virginia Readjusters have, a fearless, outspoken, and judicious promoter of harmony and co-operation of all the anti-Bourbon elements at the South. I wish it success.

H. H. RIDDLEBERGER.

HOUSE OF REPRESENTATIVES.

Washington, D. C., January 4, 1882.

I recognize in the recent views and spirited tone of the National Republican in its treatment of Southern politics a broad, comprehensive, and patriotic statesmanship, and I believe that its circulation in Texas would materially aid liberal and progressive forces.

G. W. JONES,

M. C., Fifth District, Texas.

July 23, Mr. KASSON, by direction of the Committee on Ways and Means, moved to take up House bill No. 3902 for consideration. This bill provides for a rebate on foreign materials imported into this country and used in connection with domestic materials in building ships on foreign account.

Mr. TUCKER moved to amend by inserting "domestic" after "foreign," so that our own citizens could build or buy ships in our own ship-yards on as favorable terms as foreigners. The vote being taken on Mr. TUCKER's amendment, the yeas were 95, nays 12. The yeas were—72 Democrats, 20 Republicans, and 3 Greenbackers; the nays were 12 Republicans.

Mr. WARD made the point there was no quorum. The opponents of the amendment refrained from voting to defeat the same for want of a quorum.

July 26, Mr. TUCKER moved to recommit the bill with instructions that a bill be brought in to provide for a rebate on materials used in building any ship in our ship-yards for any citizen or foreigner, &c., giving our citizens the same chance as foreigners. Lost—yeas 84, nays 96. The yeas were—76 Democrats, 6 Republicans, and 2 Greenbackers; the nays were—94 Republicans, 1 Democrat, and 1 Greenbacker. On a motion to recommit without instructions the vote was—yeas 100, nays 71. The yeas were—96 Republicans, 1 Democrat, and 3 Greenbackers; nays, 71 Democrats.

As a specimen of what the Greenbackers would do if in the majority it is perhaps proper to subjoin the following bills and parts of bills introduced by leading members of that party in Congress:

Mr. Weaver, in the Forty-sixth Congress, second session, introduced the following:

A bill for the relief of soldiers and sailors who served in the Army and Navy of the United States in the late war for the suppression of the rebellion.

Be it enacted, &c., That there shall be paid to each private soldier, non-commissioned officer, sailor, teamster, or musician regularly mustered into the service of the United States during the late war for the suppression of the rebellion, or to his or their legal representatives in case of death, as soon as his or their claim shall be examined and audited by the Second Auditor of the Treasury, the sum due him or them, the amount thereof to be ascertained as follows: Said soldier or sailor or his legal representatives shall be allowed and paid the difference in value

between the currency which he received and the standard gold coin of the United States in which he should have been paid, together with 6 per cent. interest thereon per annum from the date said soldier or sailor was mustered out of the service of the United States up to the date of the payment of the sum found due him by the provisions of this act.

SEC. 3. The sum of \$500,000,000, or so much thereof as shall be necessary to make the payments required by this act, is hereby appropriated out of the money by this act authorized to be issued.

May 5, 1879, Mr. De La Matyr introduced the following:

Be it enacted, &c., That the Secretary of the Treasury is hereby authorized and required to have prepared at the earliest practicable period notes or obligations of the United States of America to the aggregate amount of \$10,000,000, to be known as "greenback currency," for general circulation, in such amounts and in such form as is hereinafter provided for in this act.

Sections 2, 3, 4, and 5 provide for the way of keeping accounts, printing notes, denominations, &c.

SEC. 6. The Secretary of the Treasury is hereby authorized and directed to loan from the greenback currency account to the corporations hereinafter named the amounts herein specified, upon application of the properly authorized officers or representatives of the same, upon the following terms and conditions:

SEC. 7. Each and every corporation or company applying for said loan shall file with the Secretary of the Treasury the bond or bonds of said corporation or company, signed by its legally authorized representatives or agent and attested by its corporate seal, for such amounts as each may desire, not exceeding the total amount herein specified, and to be advanced from time to time as the progress of the works may demand. Said bond or bonds shall be payable fifty years from the date of the

same, and shall bear no interest for five years from said date, but at the expiration of five years from said date they shall bear interest at the rate of 3 per cent. per annum, legal money of the United States, until paid; the interest to be paid semi-annually at the Treasury of the United States.

SEC. 10. The Secretary of the Treasury is authorized and directed to loan the following amounts or any less sum, should they desire it, namely: the James River and Kanawha Canal Company, \$60,000,000; the Atlantic and Great Western Canal Company, \$50,000,000; the Florida Coast Canal Company, \$12,000,000; the Fort Saint Philip Canal Company, \$10,000,000; the ——— Railroad Company, (connecting the waters of the Mississippi with the Pacific coast,) \$——; the Rock Island, Heu-nepin, and Chicago Canal Company, \$13,000,000; the Oswego Canal Company, \$25,000,000; the Lexington and Big Sandy Railroad Company, \$5,000,000; the Niagara Ship-Canal Company, \$14,000,000.

May 5, 1879, Mr. De La Matyr introduced the following bill:

Be it enacted, &c., That whenever any municipal corporation duly chartered and organized under the laws of any State or Territory of the United States shall apply to the Secretary of the Treasury of the United States to exchange the bonds of said corporation for legal-tender paper money of the United States, the said Secretary shall issue to said corporation at par value of said bonds a sum equal to the outstanding debts of such corporation which shall have accrued before the passage of this act, at a rate of interest to be paid annually not exceeding 2 per cent.: *Provided*, That said bonds shall not run less than fifty years.

This bill alone would have authorized the issue of over \$700,000,000 of Treasury notes to municipal corporations, with no guarantee that any part of it would ever be repaid.
